We are currently looking for new colleagues to join our core banking implementation team for the position of a:

Project Manager / Development Manager

A successful candidate will engage in a full lifecycle of complex, international core banking implementation projects, being personally accountable for end-to-end delivery, keeping work on track, practicing effective communication with all project stakeholders and building long lasting relationships with our clients.

Requirements:

- At least 2-3 year experience in implementation of IT systems as a project manager or development manager
- Experience in managing a team of at least 10 people
- Background of a development specialist (Java development is preferred)
- Good understanding of technical aspects of IT implementations including system integrations, data, security
- Good organization skills and ability of relationship building within a team and with clients
- Ability to work under time pressure
- Very good command of English in writing and speaking
- Experience in banking or financial industry

Your future role:

- Management of a growing team of senior and junior Java developers
- Representation of the development team internally and in project meetings with external clients
- Daily assignment of project tasks, monitoring of their execution and reporting of progress
- Long- and Mid-term planning of team capacity
- Participation and contribution to continuous optimization of a Development Center

What we offer:

- Competitive salary, including various benefits
- Real opportunities for growth and promotion
- Full home office under the pandemic circumstances currently
- Opportunity to develop and broaden your business acumen and technical skills
- Work in a dynamic, international business service environment
- Opportunity to take part in international projects and travel all around the world
- Excellent work atmosphere
- Possibility to get valuable core banking or cloud certificates.
