

## IBM License Metric Tool (ILMT) Readiness

Your savings depend on it

### Overview

Is your organization running IBM software on virtual servers? Deploying ILMT is an IBM requirement to obtain sub-capacity pricing, without it, you might be paying for excess capacity.

ILMT is a no-charge software tool designed to report on processor value unit (PVU) license consumption for IBM software running in virtualized environments. With

proper configuration, ILMT helps organizations achieve the following:

- Maintain compliance with IBM sub-capacity and PVU licensing terms
- Track IBM PVU-based software inventory
- Support distributed server virtualization

In addition to enabling lower software licensing costs, ILMT can result in a significant improvement to your organization's overall Software Asset Management strategy.

### Accurate reports

Installing ILMT is only half the effort. ILMT requires significant manual configuration and validation in order to align the reports to the true configuration of the environment. As part of the configuration process, there are several key challenges to consider:

- Excluding software that's been purchased as part of a bundle or under a non-PVU licensing metric
- Deploying agents on the relevant servers in the environment

### The Deloitte ILMT readiness approach

Deloitte's ILMT readiness services help organizations realize sub-capacity licensing benefits and maximize ILMT value through five key areas:

1. Installation and Configuration – Install and configure the ILMT server and its agents in the environment

2. Data Capture and Reporting – Analyze and classify identified hardware and software information to improve reporting accuracy and completeness
3. Product Status Validation – Identify idle or misconfigured software that can be adjusted to potentially reduce licensing requirements
4. Baseline Reconciliation – Reconcile IBM software deployed to IBM license entitlements to identify potential license exposure or shelfware where the organization could redeploy licenses to reduce software cost
5. Sustainable ILMT Management – Assist organizations in development and implementation processes and procedures to maintain the tool and employ strategies to improve license consumption as the IT environment evolves over time
