Welcome to the Deloitte Technology Fast 50 Central Europe 2017

The Deloitte Technology Fast 50 in Central Europe is a programme that recognises and profiles fast growing technology companies in the region. The programme, which is now in its 18th year, ranks the 50 fastest growing public or private technology companies.

The Technology Fast 50 award winners for 2017 are determined based on the revenue growth over four years (2013 to 2016). Revenue growth is calculated in local currency. Companies must meet a minimum annual revenue threshold of € 50,000 in order to qualify. Exchange rates are based on the annual average given by the central bank of the company’s respective national currency.

Technology companies are invited to self-nominate for the programme via our website. Financial data of the companies are provided by the entrants themselves and is gathered via our online survey tool. This information is then cross-checked using each company’s financial statements which have been verified by their accountants or a registered auditor.

The Deloitte Technology Fast 50 in Central Europe is part of Deloitte’s global Fast 500 programme. For further information regarding the Deloitte Technology Fast 50 in Central Europe, please visit our website: www.deloitte.com/cefast50.

Companies active in the following industry sectors are eligible:
- IT & Digital Solutions,
- Internet, Media & Telecom,
- Biotech, Nanotech, Medtech,
- Clean Tech & Energy.

This is the second year that we have run the ‘Most Disruptive Innovation’ (MDI) award. This is a particularly significant and exciting initiative for us – it’s a unique way of marking out for special distinction those companies that we think will be the technology leaders of tomorrow with the greatest potential for revolutionising their markets.
Thoughts from the Programme Leader

Deloitte Technology Fast 50 in Central Europe reveals the depth and scope of innovation across our region, driven by many of the dynamic, inspiring young companies that in time will form our economic bedrock.

I find many things about the participants impressive. For example, the average growth rate of the companies in this year’s ranking has exceeded last year’s outstanding 1,057 per cent to hit 1,127 per cent. I’m particularly proud to see that once again the clear majority (68 per cent) of companies featured in the ranking are first-time entrants, highlighting the speed at which our top-performing young companies are developing. Just as pleasing, all the top five companies ‘graduated’ from 2016’s Rising Stars category, which recognises those high-growth businesses too young to be listed in the main Fast 50. This bodes well for the future of our region.

This year we publish the 18th annual edition of the report. I find it remarkable that around half of companies in this year’s ranking already develop their operations or explore entrance possibilities in countries outside Central Europe. The export of technology is an optimistic prognostic for the region.

Also with a view to the future, this is the second year that we have run the ‘Most Disruptive Innovation’ (MDI) award. This is a particularly significant and exciting initiative for us – it’s a unique way of marking out for special distinction those companies that we think will be the technology leaders of tomorrow with the greatest potential for revolutionising their markets.

This year’s MDI winner is Serbia-based heating and ventilation technology business DADANCO Europe, which is already taking its market by storm – see page 61 for full details of how it’s poised to introduce a practical means of slashing energy consumption in urban environments across the world.

The quality of entrants was so high in 2017 that we’ve had to recognise another company too, which would doubtless have been the winner in any other years. So we are also giving a special distinction to Bucharest-based UiPath, the fastest-growing robotic process automation vendor in the world (see page 67 for further information).

Our heartfelt congratulations go to all companies in every category – you’re setting standards of excellence in innovation that cannot fail to inspire others. I believe that every reader will find something to inspire and energise them in the stories of all these vibrant world-changing companies.

Agnieszka Zielińska
Partner, Financial Advisory Services
Central European Fast 50 Programme Leader
Deloitte
Whether large, small, public or private, emerging growth companies are powering innovation in the broader economy and the examples in this report are a best in class display of cutting edge businesses who are transforming the way we do business here in Central Europe.
The combination of technological innovation, entrepreneurship, and rapid growth displayed by the companies recognized in all four categories of this year’s Fast 50 Central Europe report is astounding. Year on year, I am excited to witness the innovation and enthusiasm these diverse companies are able to display as they disrupt the tech industry across Central Europe.

My particular congratulations go to our winners: Kiwi.com s.r.o. (Fast 50), CGTrader, UAB (Rising Stars), ZOOT a.s. (Big 5) and Dadanco Europe (Most Disruptive Innovation).

Being recognized as a Technology Fast 50 winner provides increased visibility, brand recognition, and growth opportunities to these fast-growing companies. Whether large, small, public or private, emerging growth companies are powering innovation in the broader economy and the examples in this report are a best in class display of cutting edge businesses who are transforming the way we do business here in Central Europe.

The impact of the Fast 50 programme extends far beyond Central Europe. All participating companies that meet the programme’s criteria (not only those that make the top 50) also have the opportunity to be recognised in our Europe, Middle East and Africa (EMEA) Fast 500 ranking. Alongside Deloitte’s US and Asia Pacific Fast 500 initiatives, this will bring them local, national, global, and social media exposure.

Deloitte has been honouring the fastest-growing technology companies in Central Europe for nearly 20 years. We understand that it takes foresight, dedication and a relentless drive to innovate in order to join this elite group, and I am eager to see what might be next for every company recognized in our 2017 edition of the CE Fast 50.
2017 Technology Fast 50 ranking

Criteria for 2017 Technology Fast 50

Companies must meet a number of criteria to be considered eligible for the main CE Fast 50 ranking:

- Annual revenues of at least €50,000 in each year between 2013 and 2016.
- Develop or manufacture proprietary technologies or spend a significant amount of capital on R&D.
- Have an ownership structure that excludes majority-owned subsidiaries of strategic entities.
- Headquarters in a Central European country (Albania, Bulgaria, Bosnia & Herzegovina, Croatia, the Czech Republic, Estonia, Hungary, Kosovo, Latvia, Lithuania, Macedonia, Moldova, Montenegro, Poland, Romania, Serbia, Slovakia or Slovenia).
- Winners are then selected by ranking their revenue growth over the four years from 2013 to 2016.

All it took was one trip – and a new business idea was born

Kiwi.com: 1st place in the Technology Fast 50 ranking in Central Europe

It was always going to succeed: the Kiwi.com algorithm takes all the effort and much of the expense out of planning and buying plane journeys – cutting out days of painstaking research and calculation, and often slashing prices to a fraction of the headline cost. So it’s little wonder that Kiwi.com is Central Europe’s fastest-growing technology business.

If any start-up has a chance to succeed, then it is almost certain to be one that manages to perfect something we deal with on a regular basis – such as cutting costs when buying airline tickets. But in order to achieve large-scale success, it also has to find a gap in the market.

And that’s exactly what Kiwi.com has been able to do.

Today, almost everybody knows this story (in the Czech Republic at any rate). But it’s worth telling again, as the company would never have come into being without it.

The year is 2011, and Oliver Dlouhý is looking for the cheapest connection for his trip to Porto.

But all the tickets offered via search engines are too expensive. Oliver therefore has to carry out a complex series of calculations involving a wide range of airline combinations. But it’s all worth it, because he manages to save several thousand koruna.

Even more important, a genius idea for a new business is born.

To come back down to earth, it was not all a fairy tale with a happy ending. There were plenty of dodgy take-offs and bumpy landings along the way. Oliver’s lack of a technical background was one problem. He was not a born programmer but an autodidact with the bare minimum of coding knowledge who learnt to work with technology as he built the business.

But the idea had clear added value – because, unlike the competition, Kiwi.com also started searching for the cheapest flights among offers from low-cost airlines that had no partnership agreements with one another.

This factor was at the heart of the Kiwi.com difference, enabling it to find and recommend the very best options for travellers across the world.

Almost immediately after its launch, the Kiwi.com search engine ranked in the New York Times top 10 most useful websites for travellers in 2012. A year later, the company was already selling tickets. It only needed five years on the market to generate daily turnover of more than EUR 2.5 million.
Now the Kiwi.com search engine mediates over 6,500 bookings every day and the company is growing at breakneck speed. In 2017, as confirmed by its position at the top of the Fast 50, Kiwi.com became the fastest growing technology company in Central Europe.

It is worthy not only of our heartfelt congratulations – but also of the thanks and admiration of anyone who ever has to buy an air ticket.

Plane tickets as a commodity only have two parameters: price and time. However complex our technology is, the end result is that we are always able to find the cheaper or faster connection. Or both.

Oliver Dlouhý, CEO and Founder of Kiwi.com
The IT industry is changing fast, and we need to adapt to its changes as soon as they emerge. We work both with start-ups and Fortune 500 companies, a range that requires great flexibility in terms of the technology stack. We hired over a hundred people last year to keep up with our clients’ needs.

At the same time, we remember that it’s our culture and our processes that often convince clients to choose us over our competitors. That’s why, while hiring new people every day, we strive to maintain the employee-friendly atmosphere and small-business culture that makes us stand out from the crowd.

Wiktor Schmidt, CEO, Netguru Sp. z o.o.

We’ve focused our attention from the start on Western markets that expect the highest delivery standards for our products and services. To match these demanding requirements, we’ve had a constantly growing need for talented people and continuous self-improvement. This means we’re always building and refining our internal processes and culture. The secret is to be focused not just on our goals, but also on the entire process and learning curve that’s necessary to get there. Everything we learn along the way is what makes us a fast-growing company.

It’s also very important that you don’t forget to have some fun, because it makes the task much easier!

Mateo Perak, CEO, Profico
I believe that the team is the most important factor for a successful business. All results come from every team member’s contribution, dedication and ability to work with others. We bring value to every solution we provide – the creation of that value is acknowledged not only by our clients and partners but also by our team. What really matters is how much value we can create in a finite amount of time. Every form of recognition we receive is a victory for each and every member of the ADEO WEB team. Being recognised in the Deloitte Fast 50 means a lot to us. As our business is a business built around recommendations, we see this as a critical enabler for us to take our next steps and become an even more successful company.

For me, success is when I’m happy and everyone around me is happy too. Our plans for the future are to be recognised in the Chicago Fast 50, and our long-term vision is to be the happiest company.

Paulius Nagys, CEO, ADEO WEB, UAB

Great products and businesses don’t happen just because you want people to create them. The team must want it too. And that defines the kind of people you should seek and hire to build an effective leadership culture. Ownership should extend through all levels of management and responsibility, no matter whether you’re a Board member or a junior developer.

Maciej Cielecki, CEO, 10Clouds Sp. z o.o.
1. **Kiwi.com s.r.o.**
   - **Country:** Czech Republic
   - **CEO:** Oliver Dlouhý
   - **Website:** [www.kiwi.com](http://www.kiwi.com)
   - **Founded:** 2012
   - **Last Year’s Rank:** -
   - **Growth Rate:** 165%

   CEO Oliver Dlouhý set up Kiwi.com in 2012 to provide users with the cheapest flight itineraries and combinations. Its sites serve customers across the world with 24/7 support. Today, the company sees more than 50 million flight searches every day and employs over 1,400 people. The site makes air travel affordable and easy, by allowing consumers to book everything from individual flights to complete flight itineraries across multiple airlines (both low cost and full-service) in a straightforward and cost-effective way. Kiwi.com issues boarding passes directly to customers, and offers an unrivalled guarantee which protects customers from flight delays, cancellations and scheduling changes.

2. **Deeper, UAB**
   - **Country:** Lithuania

   - **Growth Rate:** 048%

   Deeper is a consumer electronics company that creates intelligent devices to enhance the active lifestyles of customers around the world. Deeper’s first product, a smart wireless sonar for anglers, revolutionised shore fishing. Now available in three models, the Deeper Smart Sonar sells in over 50 markets worldwide and has received 12 international awards including an Innovation Award at CES 2016. With such products, Deeper continues to grow rapidly and fulfil its vision of inventing new experiences in the field of outdoors equipment.

3. **Prusa Research s.r.o.**
   - **Country:** Czech Republic
   - **CEO:** Josef Průša
   - **Website:** [www.prusa3d.com](http://www.prusa3d.com)
   - **Founded:** 2012
   - **Last Year’s Rank:** -
   - **Growth Rate:** 910%

   This Czech 3D-printing company was founded by Josef Průša in 2009 as a one-man startup. Within a few years, and without any external investments, it has evolved into one of the most innovative and fast-growing companies in the 3D industry. Currently it manufactures more than 6,000 3D printers every month.

Mate Rimac
www.rimac-automobili.com
Founded: 2011
Last Year’s Rank: 20

Rimac Automobili is a technology company that focuses on the development and production of next-generation electric powertrains, battery systems and all other technologies necessary to take transportation to the next level. Rimac also manufactures the Concept_One – the world’s fastest electric car, which is also believed to be the fastest-accelerating car of any sort in production. It has taken just six years for the company to grow out of a small garage in Croatia to become a globally recognised technology provider and industry leader with more than 200 employees.

Invenis, UAB

Lithuania
Jonas Abromaitis
www.tinylabkids.com
Founded: 2012
Last Year’s Rank: -

Tiny Lab was founded in 2012 by a group of experienced developers and designers who love to play and create positive games. The team came together to work on their first game — the strategy MMO Nebula 44, which has had an active user base for over three years. Since forming the company, the team’s main focus has been on accessible fun — be it in conquering the galaxy, guiding an adorable robot ball, slicing cheese for hungry mice or racing through a huge variety of environments. The company is most famous for its leading games series, Fun Kid Racing. Players can choose from over 70 racing themed games, ride on cool cars, trains, tanks, motorcycles and fantasy cars in highly-crafted worlds.

bold.

Bold designs and implements efficient omnichannel and e-commerce solutions to help companies sell more. It stands out thanks to the help it gives clients to deploy and achieve better performance from their e-commerce and omnichannel business processes. The company thinks strategically about understanding, developing and streamlining online-sales business processes and supporting companies in the digital transformation of their sales channels. The company is one of Central Europe’s most experienced in implementing the Magento and ShopWare platforms.
When I started the company, everybody told me it is impossible to make a car in Croatia. Today we not only make the world’s most powerful and exciting electric cars, but also deliver core systems to the leading automotive manufacturers world-wide. Everything is impossible until somebody actually does it. We have even bolder dreams now. Dreams that seem impossible to most people. I have devoted my life to make those dreams a reality.

Mate Rimac, CEO, Rimac Automobili

When our business started, we had no idea of building and developing STRV into its current form. We began with small technological engagements, in the form of web pages and applications. The size of projects and our team started to grow over time. We’ve now managed to bring together a group of people who are deeply passionate about technologies and are constantly moving forward.

Lubo Smid, CEO, STRV s.r.o.
Our services go beyond simply translating documents or interpreting spoken language – they’re about facilitating dialogue and enabling mutual understanding between our clients and their audiences. This way, they can achieve goals that are unattainable with their own language resources. By using our own technology, we have become an innovation company – casting new light on the translation industry and helping it adapt to today’s online lifestyle. We aim to provide translations faster, without sacrificing quality.

Agnieszka Chmielewska, CEO, dogadamycie.pl Sp. z o.o.

The only way to be successful when everything around us is changing so fast is to be flexible and change along with the world. We seek to rapidly understand the needs of our target group and satisfy them before anyone else – it is very rewarding to be the first!

After running PhoneArena for more than 16 years, I became intimately aware of the pain points that digital publishers encounter when trying to monetise advertising space effectively on their websites. My team and I spent much time trying to optimise our own monetisation strategy. Eventually, we created an in-house tool that streamlined performance and increased the company’s advertising yield. After fine-tuning it, we realised that there was significant potential in pursuing this as a separate business opportunity, so we decided to launch PubGalaxy.

We have always striven for excellence in our work. In fact, our goal is to be ‘beyond exceptional’. We want our products and services to generate additional value for our customers and to deliver these services in an outstanding way. That is what’s behind our mission: to offer internet products and services with high added value.

**Pressian Karakostov, CEO, Titan Gate JSC**

Many tasks require the dexterity of the human hand. At OptoForce, our aim is to give robots a human sense of touch.

**Ákos Dömötör, CEO, OptoForce Kft.**
We started out as a small company with a handful of employees. Now, every day a small army heads to our office, motivated and determined to prove that solutions exist even to those problems that people have not as yet tried to solve. I have to say, I could not be prouder of them.

Peter Dostál, CEO, Aliter Technologies, a.s.

We believe that a happy and satisfied team is the best asset a company can have – and we owe our success to our people. We plan and then build as a team at the outset of every project, an approach that leads to the best possible result every time. We’re continuously expanding our team with the best people for every role. With ongoing education and new challenges, our team is always fully up-to-date with new tools and technologies.

28 Profico

Croatia

Mateo Perak & Ante Matijaca

www.profi.co

Founded: 2012

Last Year’s Rank: -

Profico is a fast-growing, full-service digital agency and technology solution provider that has helped many enterprise and SME-level clients worldwide to grow their business. With more than 30 employees, the company is focused on software design and development in the areas of mobile, web and IoT-based technologies. Profico is also a Smart City solutions provider, building its own software products and IoT-based systems. One of the company’s most important products is a Smart Street Parking System, a city-scale smart parking system that enables cities to provide dynamic traffic control, guidance and payment.

29 Oktawave Sp. z o.o.

Poland

Maciej Kuźniar

www.oktawave.com

Founded: 2012

Last Year’s Rank: -

Oktawave is an Infrastructure as a Service (IaaS) platform. Its services are: cloud servers (OCI); safe and rapid data process and storage systems (OVS, OCS); and database and application environments. Oktawave provides clients with self-developed provisioning and management systems. These include Autoscaler technology, which observes the load and demand for computing power; it dynamically changes the service parameters up or down, enabling applications to run smoothly. It is the first Polish cloud company to comply with ISO/IEC 27001 security certification and CSA STAR data protection certification. Clients include Coca-Cola, TUI, AVIVA, Pajacyk.pl and Grupa Pracuj.pl.

30 Sarigato Sp. z o.o.

Poland

Szymon Kosiński

www.grupasarigato.com

Founded: 2011

Last Year’s Rank: -

Sarigato Group works in the online advertising market, focusing on three areas under different brands: Sataku – Poland’s largest network of rich media/video ads; Sarigato – a performance marketing agency; Yintaro – a B2B marketing specialist. A key reason for establishing the Sarigato Group was to help those in need. The Board therefore gives a large share of Group profits to CSR activities. The Sarigato Foundation is involved in three core projects: KarmimyPsiaki.pl, which helps homeless dogs; Szkola30.pl, which provides programming education to children from orphanages; and Sklep.karmimypsiaki.pl – a zoological shop that transfers 100 per cent of its profits to the Sarigato Foundation.

KERRIS Group is one of the fastest-growing interactive agencies in Poland. The company develops and provides services in the field of creation, new technologies and performance marketing. From dozens of available solutions, KERRIS implements those that are most effective in achieving the goals of our business partners. Among these are brands like Porsche, Digital Care, L’Oréal Polska, Roche, Grohe Polska, Kruszwica, Honeywell, Uber and Polycom, as well as leading media houses and many inspiring start-ups.

The company is a European Python Powerhouse, with over 160 developers ready to empower projects with outstanding code and a results-driven Agile process. Its toolbox of frameworks includes Django, Angular and ReactJS, each chosen to rapidly create reliable solutions. Based in Poland, it employs more than 280 people, including UX designers, automatic QA testers and communication experts who ensure smooth cooperation with partners. With over 12 years' experience, STX Next can provide full-stack web apps to clients across all industries. It is also proud to work with long-term technology partners throughout the US, Canada, Australia, Middle East and Western Europe.
Accedia’s mission statement is “Developing software innovations”. Building a culture of innovation has therefore been at the top of our agenda since the foundation of the company. I believe this has been a key factor in our success.

Dimitar Dimitrov, CEO, Accedia JSC

Our success is based on client orientation. We are always searching for the best solutions that allow us to offer our clients wider choice, faster delivery, better customer service, easier return processes, a wider choice of payment methods and more. We see that Baltic people are increasingly making daily household purchases on the internet. Our goal is therefore to offer the entire range of products they need to make shopping quick and easy, even by phone. We must therefore be one step ahead, being ready to satisfy our clients’ needs even before they emerge.

Recognition in the Deloitte Fast 50 shows that we are on the right track. This is inspiring us to move forward, to work even harder and to do better.

Dainius Liulys, CEO, Pigu, UAB
As pioneers of big data marketing in Central Europe, we stepped into the unknown with few assets apart from our vision. A vision of advertising that is not a burden for the internet users but delivers great results nonetheless. We didn’t know at the time if the market was ready for change, but now it is clear that the revolution has begun. Data is the new currency in the transforming economy. We are one of the world’s biggest data warehouses, and one of few companies that deliver data from mobile devices on a large scale.

**Piotr Prajsnar, CEO, Cloud Technologies S.A.**

We treat our people with respect and trust. Everyone who is capable of taking responsibility for their thoughts and actions remains with us. Those who cannot are incapable of working in a culture like ours over the long-term. Naturally, people do leave us to earn more money, but they are in the minority.

**INVENTI Solution s.r.o.**

INVENTI's main areas of expertise include software development and analysis, quality assurance, mobile applications and supporting start-ups. Its products include customer portals, integration software, testing-process outsourcing and mobile applications for tourism. Its key to success lies in the motto “It’s about the people”, which it applies to its customers as well as its employees.

**Monterail Sp. z o.o.**

Monterail is a close-knit team of more than 80 experts offering web and mobile development for start-ups and enterprises. With seven years’ experience, over 100 products delivered and a 96 per cent client satisfaction rating, it is the go-to team for a range of clients. Its clients are from all over the globe – from Australia, Kenya, Germany, Switzerland and the United Kingdom to Atlanta and San Francisco. The company believes in giving back to the community and holds a number of events promoting knowledge sharing and networking. In 2017 alone, over 1,000 people attended events it helped to organise, including Girls in IT, VueConf, meet.js and UX Wrocław.

**S.C. QUALTEH JR SRL**

The company draws on its experience, partnerships and development capabilities to provide: concept and flow design, development and customisation for innovative high-quality enterprise and mobile software solutions; as well as both-ways data transfer and processing between various business systems already implemented by a company.

| 50   | TeleSoftas, UAB      | Lithuania | -                | Algirdas Stonys | -                |
|      | **TeleSoftas**       |         |                  |         |                  |
|      | Since its launch in 2004, TeleSoftas has been creating an environment where excellence, creativity and initiative can thrive. Today, it operates across the world, with close to 300 employees in offices in Kaunas, Vilnius, Zurich, Dubai and now San Francisco. It provides consulting and software development services for clients around the globe, from well-known brands like the Smithsonian, the BBC, Ferrari and Aon, to innovative SMEs like YellowDog. For all, it delivers world-class and often pioneering solutions in sectors from mobile and big data to Fintech, communications and more. |
Our partners often praise us for our agile approach. We lead them step by step through a complex application-development process – from workshops, where we clarify the concept behind the product, to releasing it on the market.

We are not afraid of being a pioneer. We focus effort not just on creating mobile solutions, but also on building an outstanding company culture – last year, for example, we organised a ‘workcation’ for our team to spend a month in Bali.

I believe that creating the very best products demands something more than knowledge, experience and engagement. You need to stay excited and hungry, and that’s what makes our team one in a million. We love what we do and we take our passion out of the office and into the community. We organise get-togethers for developers and graphic designers, bootcamps for beginner programmers and lectures for students. I know that, with this team, we can respond to every challenge and win.

Wojciech Szwajkiewicz, CEO, Droids On Roids Sp. z o.o.
Criteria for Big 5

This ranks large companies that have achieved extraordinary growth over four years. Eligible companies must meet the same criteria as the main Fast 50 ranking, with the exception that annual revenue in the final measured year (2016) must exceed €25 million.

**ZOOT**

ZOOT is more than a simple online shop. It is building (Fashion) Retail 3.0, a revolutionary bridge between the e-commerce and bricks and mortar worlds, with strong focus on customer experience, technologies and fun. It sells more than 300 brands and has set up a physical network of “TRY BEFORE YOU BUY” pick-up points. Customers order online, try the clothes on and pay if they fit. The company’s significant growth was confirmed in April 2017 by the Financial Times’ list of 1,000 fast-growing companies in Europe, which ranked ZOOT in 43rd place. ZOOT is based in Prague, but also services other Central European countries (such as Slovakia and Romania) and will soon be expanding further.

Just as today’s leading car network isn’t about cars and the biggest property rental service isn’t about apartments, we at Q are not just about software development. We are primarily a ‘management company’ whose extremely powerful and well-established processes make the entire development process smooth and easy. Talented developers can be found anywhere, from the US to Indonesia; a good development company with perfected methods and practices is something else. That’s why we have grown so fast, but with stability, over the last three years.

*Filip Ljubic, CEO, Q*

We started out with just three people on board, so reaching 100 employees in just five years seemed like a miracle to me. However, I soon realised that it was also a curse – we had to redefine each and every process in our software house, focusing not only on development but also on middle management, sales, marketing and more. We finally overcame the problem by attracting the most dedicated professionals to work with us. I can confirm that it’s true what they say: when you take care of your employees, they pay you back by taking care of your clients.

*Mateusz Kubiczek, CEO, The Software House Sp. z o. o.*
It might sound simple, but I believe we have created our success by striving for happiness. Bringing together the best specialists with the market’s strongest technical background is no longer enough. Over the last 14 years, instead of putting financial goals at the forefront, we have consistently invested in creating an environment where all this cumulative excellence, creativity and initiative can thrive. I am very happy that we have proved how putting people at the core of the company’s goals is enabling us to provide excellent client service, to continuously innovate, and consequently to grow.

Algirdas Stonys, CEO, TeleSoftas, UAB

Our employees create award-winning mobile and web solutions. We’ve had to develop various new metrics and processes to continuously improve quality while providing more benefits for our growing teams and maintaining a steady and healthy rate of growth. Recognition by Deloitte for the fourth time is confirmation that we’re doing a great job!

Josip Bišćan, CEO, Infinum d.o.o.

Merit Media Int is a Croatian company that has rapidly established itself as a leader in the global publishing and consulting markets for the worldwide transformer industry. Given its strict specialisation, the founders decided to focus the company on the global market, which is large enough to support business concepts of this type. The company also issues an industry-specific professional magazine, “Transformers Magazine” in English, which targets transformer manufacturers.
We are building long-term relationships with our customers. We care about people, our partners and employees alike, while working together to create new mobile applications.

**Martin Adámek, CEO, Inloop, s.r.o.**

A few years ago, BetGames.TV was a start-up with big ambitions – a pioneer in the gambling industry that combined traditional betting with popular lotteries and table games. The company’s success is based on our talented team, which has a great mix of experienced industry professionals and highly creative millennials. We appreciate our shareholders as their trust in the past is what is enabling us now to provide high-quality product. We’re happy to solve new challenges every day. I would like to take this opportunity to thank everybody for all the good vibes and our ongoing forward momentum.

**Mindaugas Stanelis, CEO, TV Žaidimai, UAB**
Hangar18 has successfully maintained the high quality of its products and services by using a method that brings the collaboration of small, highly specialised teams together with a set of long-term development processes. The growth of our NOA brand has proved to be the ultimate test of Hangar18 as a company that can succeed on an international level and pass every test standing in its way.

Mario Kralj, CEO, Hangar 18 d.o.o.

CGTrader was born with the notion that the market lacks a democratic place for 3D artists to sell their digital artwork. We are certain that rewarding the artists fairly is the key factor that has enabled CGTrader to attract so many designers and quality 3D models to the platform in such a short time. As stock 3D models cost only a fraction of what is normally spent on creating 3D content, CGTrader’s value proposition has strongly resonated with the market and fueled the company’s growth. With the development of technologies such as spatial computing, augmented and virtual reality and WebGL, it is becoming essential to make 3D content creation more efficient. CGTrader has a significant role to play and huge potential to grow further. Adhering to the market needs is a challenge, but we have an ambitious team that is not afraid of ambiguity, and we have already achieved some “impossible” goals.

Dalia Lašaitė, CEO, CGTrader, UAB
Technology delivers the power behind modern marketing. At INIS, as well as creating the technology, we go a step further by adding a second factor that’s also essential in creating marketing processes for our customers: an expert team. It’s thanks to our qualified people that we can run effective marketing campaigns that deliver one of the crucial keys to our customers’ financial success.

Roman Grygierek, CEO, INIS Sp. z o.o.

“Whatever you are be a Good one” – a famous quote from Abraham Lincoln, which we adopted as our own on day one. Either you do it right, or you don’t do it at all. This motto is at the core of our company and at the core of each and every one of our team – a team of experts who work hard to be the best in their fields. That’s what has kept us growing nine years in a row, and is sure to keep us growing in future.

Tomas Varnas, CEO, Good one, UAB
This is a special award for the Most Disruptive Innovation, whose inventiveness and deep technological know-how is enabling it to develop solutions with the potential to significantly disrupt established markets and value networks.

Most Disruptive Innovation: winner
Breathing new life into urban buildings across the world

This year’s Most Disruptive Innovation (MDI) award celebrates a company that’s poised to revolutionise the energy-efficiency of our cities. It’s all about pumps, pipes and progress.

It was more than 20 years ago, and far away in Australia, that the first steps were taken towards the creation of DADANCO Europe, the Belgrade-based heating, ventilation and air-con (HVAC) technology company that’s the recipient of this year’s Deloitte ‘Most Disruptive Innovation’ (MDI) award.

This was when company CEO and founder Vladimir Petrović (the ‘M’ differentiates him from the Serbian football player and manager of the same name) and Professor Russell (Sam) Luxton of Adelaide University started working together on finding a solution to an age-old HVAC challenge.

How to increase the energy-efficiency of large-scale commercial HVAC systems.

The solution the two men developed was an ingenious nozzle design so successful that it’s now used in more than 2,500 buildings across the world. This was merely the first of a series of innovations that drew on their thorough understanding of the principles of thermo-fluid sciences to bring building occupiers a more comfortable and sustainable living environment.

And it delivered the basis for the creation of Mr Petrović’s first company, DADANCO Pty Ltd.

Fast forward to 2017, and Mr Petrović now holds four international patents. He is widely recognised as a world expert on green building, with a roster of awards including Entrepreneur of the Year. Recognition for the company includes a series of NASDAQ technology awards, as well as market-leading positions in the US and Australia.

But the story doesn’t end there – for, two years ago, Mr Petrović founded DADANCO Europe to manufacture and commercialise a growing range of revolutionary products across the continent.

The ethos remains the same as in those earliest days in Adelaide. “Staying at the forefront of scientific development through research, technical know-how and product-enhancement is an absolute necessity,” he says. “The combination of core values we developed in the earliest days – teamwork, excellence and integrity – means we don’t aim just to supply a component. Rather, we work with the building’s designer and whole development team in applying the optimum technology that best meets the end-user’s needs.”

Now, DADANCO Europe has embarked upon a new project – the 10xHydro turbine – which Mr Petrović calls “the most disruptive technology we have ever been involved with”.

“Essentially, we have found a way to regenerate energy within a building’s piping systems,” he says. “This means that we can turn every building into a hydro power plant.”

The most important issue for renewable energies relates to their use in urban environments and the utilisation of ‘microgrids’ – a small network of electricity users sharing a single source of supply. As Mr Petrović says, “There is not enough real estate in cities to place solar panels on rooftops, nor is there an environmentally acceptable way of using wind turbines.”
“The 10xHydro solution uses microgrid technology to recover some of the pumping energy already used and return it to the building. Interestingly, it’s based on an original design by Nicola Tesla, the great Serbian-American inventor and electrical engineer who died in 1943. But this is a thoroughly modern solution, which is patent-protected worldwide.”

It’s also proving in testing to be highly effective, regenerating almost half of the energy of the fluid available in a building’s pipe network for return to the building or storage in batteries.

The scope of potential applications for the technology is highly diverse, ranging from hot, cold and drinking water systems in buildings to district-wide heating and cooling networks, municipal water supplies and, above all, natural gas and refrigeration applications.

As Mr Petrović says, “Essentially, if there is a closed piping system through which a fluid is distributed, then the chances are that the 10xHydro turbine can regenerate a significant amount of pumping energy.”

To date, the team behind the solution has invested several million euros and three years of their lives in developing the technology. And now the project is beginning to get really exciting: performance research is complete and beta sites have been identified.

“We’re seeking partners to bring this technology to market and commercialise it across the world within the next 12 months,” Mr Petrović explains.

It’s not hard to see why the independent MDI jury selected DADANCO Europe as this year’s winner. And it’s just as easy to foresee a future in which its positive power of disruption has radically reduced the scale of power consumption in buildings and cities across the world.

The combination of core values we developed in the earliest days – teamwork, excellence and integrity – means we don’t aim just to supply a component. Rather, we work with the building’s designer and whole development team in applying the optimum technology that best meets the end-user’s needs.

Vladimir M. Petrović, CEO and Founder of DADANCO Europe
The times when decisions were based on the individual opinion of the company owner have long gone. At Salelifter we know the importance of using data to draw conclusions and make decisions. Therefore, every day we analyse data, process it and draw conclusions which enable us to make targeting recommendations that maximise the effectiveness of our customers’ campaigns.

Roman Grygierek, CEO, Salelifter Sp. z o.o.

Great people and great software share a common denominator. Great people change the world for the better. Exceptional software is what helps them do so. This is what we at Gauss are trying to do – to use this powerful synthesis to change the world for the better.

Simply put, there is much more to our industry than just fantastic software. Passion and enthusiasm are necessary for the exceptional execution of ideas. This precise delivery and execution are what drives our success.

Ivan Lozančić, CEO, Gauss LTD
We believe that for state-of-the-art online solutions to succeed, it takes a combination of sophisticated strategy, analytics, online-media usage, focus on performance, state-of-the-art technologies and, in particular, a human being. We keep this in mind when structuring our team. This is how we address challenges, and it’s why we are successful.

Vladimír Vanek, CEO, Riešenia, spol. s r.o.

We live at a time when the development of tools used to process and analyse data is very dynamic. We need to learn to extract from a wide range of data those which allow us most effectively to achieve our business goals. And we have at our disposal more and more advanced and sophisticated tools designed specifically to work with various categories of information (such as spatial data, for example). Cenatorium delivers unique data from across the highly diverse real estate industry, which can provide the foundations for developing solutions tailored to many different sectors of the economy. Thanks to us, entrepreneurs, public organisations and individuals can make the best possible business or life decisions.

Adam Sobczak, Board member, Cenatorium Sp. z o.o.
Most Disruptive Innovation: special recognition
Whenever there is a discussion of the most potentially disruptive technologies on the planet, robotics is never far from the top of the list.

So it shouldn’t be too surprising to learn that Bucharest-based UiPath – the fastest-growing of the world’s leading robotic process automation (RPA) vendors – has been awarded a special distinction in this year’s Most Disruptive Innovation (MDI) award scheme.

But it is somewhat surprising to find that the company’s mission is not so much to help businesses save costs by automating laborious, repetitive, rules-based tasks.

Rather, in the words of UiPath’s CEO and Co-Founder Daniel Dines, “Our mission is informed by the belief that work should be creative and inspiring for everyone. There are millions of people doing dreary, boring tasks like data entry and application processing at their workstations every day. Non-invasively integrating intelligent automation into client systems means employees can be redeployed to more meaningful, satisfying and important roles that truly require the human touch.”

“And the ability of our software bots to mimic the actions performed at their computers by employees has placed us right at the forefront of the so-called ‘Fourth Industrial Revolution’.”

UiPath was only incorporated in 2015, but this attitude has already seen it rack up widespread recognition from leading independent analyst firms including Everest Group (global leader and star performer in RPA) and Forrester (RPA industry leader, based on the company’s superior technology).

Even more important, 2017 has been the company’s most dramatic year to date, with an explosion in demand for RPA coming from key global markets like North America, Western Europe, India, Japan and South East Asia. To meet this burgeoning interest, UiPath raised $30 million in funding in April, underpinning its developing global network of more than 200 employees based in offices across four continents.

Today, the company’s clients include organisations from over 20 countries in industries ranging from business process outsourcing, shared services, banking and telecoms to insurance, healthcare, manufacturing and more.

According to Chief Robotics Officer Boris Krumrey, UiPath is continuously seeking to extend its technology lead. As he says, “We’re constantly enhancing our RPA solution through ongoing research and by using advanced models of intelligent automation, such as computer vision, machine learning capabilities and natural language processing.”

This resulted in two further awards during the summer – those marking Outstanding Achievement in the Enterprise Use of AI and the Use of AI in Enterprise, presented at June’s CogX AI Innovation Awards in London.
When receiving the awards, Daniel Dines was not shy of emphasising the disruptive impact of his company’s work. “When adding computer vision and cognitive functions into the mix, we see our software robots achieving a human-level capability to process data and interact with applications,” he said. “Intelligent automation is definitely what will transform the future of business and workforce management.”

It’s precisely this sort of vision that’s behind our unique award to UiPath of a distinction in Deloitte’s 2017 MDI programme.

Clearly, further dramatic expansion – and many more awards – lie ahead for this outstanding Central European business.

Our mission is informed by the belief that work should be creative and inspiring for everyone. There are millions of people doing dreary, boring tasks like data entry and application processing at their workstations every day. Non-invasively integrating intelligent automation into client systems means employees can be redeployed to more meaningful, satisfying and important roles that truly require the human touch.

Daniel Dines, CEO and Co-Founder of S.C. UiPath S.R.L.
At Yieldbird, we help digital publishers increase their revenues through yield optimisation and programmatic advertising. It’s a business like no other. It’s about adapting disruptive technologies that completely reshape the playing field every couple of months. Applying global solutions to local requirements – sometimes very specific and non-standard – is what we do day-in, day-out. To maintain the pace and continue our growth, we need passionate professionals who can see the bigger picture. Now, thanks to our people, we’re developing technologically advanced instruments to meet the demands of tomorrow for digital publishers worldwide. And this is what I see as the greatest success of our entire team.

**Bartlomiej Chmiel, CEO, Yieldbird Sp. z.o.o**

We aim to be a leading IT solutions company, in which technology experts are inspired to innovate. This is why we make significant investments in developing talent and aim constantly to nurture a friendly and open environment where everyone can share ideas, excel their potential and feel appreciated.

**Desislava Kozhuharova, HR Manager, Accedia JSC**
The rocketing growth of the Pilulka group is primarily based on our well thought-out planning of all the individual steps and phases of our development. At each of these stages, most firms tend to have difficulty co-ordinating the recruitment of high-quality people with maintaining efficiency and securing sufficient funding. We’ve performed very well in all these areas so far.

Petr Kasa, CEO, Pilulka Distribuce s.r.o.

Data is the key component of a successful marketing campaign. The key challenges that companies will face are around how to collect and monetise as much of their own data as possible, then combine it with third party data and use it to make rapid decisions on a large scale. Telum is here to help companies overcome those challenges.

Mario Ivić, CEO, Telum d.o.o.
The Japanese proverb “Shobai-wa ushii-o shidare” means that every job, like foam from the mouth of an ox, is the result of patience and toil. Being one of the companies in the Deloitte Technology Fast 50 ranking for Central Europe is proof that we are doing our job well. That said, we’re not resting on our laurels – we’re looking ahead to future challenges, which require hard work and the full involvement of our great team.

We have always seen our business as more than just a business. So, ever since the launch of our company, we have provided support for orphaned children and homeless animals. We remember that great deeds are not always needed to do good. Sometimes small gestures are enough.

*Michał Żelażewski, CEO, Sarigato Sp. z o.o.*

Further expansion? Nothing is certain as yet, but we definitely want to grow and become a leader across Central and Eastern Europe.

*Ladislav Trpák, CEO, ZOOT a.s.*
We have a motto at Deeper: “Dream Big”. It’s not just about having great ideas, it’s also about pushing yourself to take those ideas further. And our success comes from having a strong team that buys into this approach. Our R&D team is constantly working to add new functions and improve performance, while our logistics guys are always finding new ways to optimise performance. In terms of marketing, we aim to push ourselves creatively both with our content and our strategy. And our sales guys never rest – they're always fighting to conquer new markets. Being recognised as a fast-growing company means a lot to us – it reaffirms our commitment to our ambitious approach, and it gives new impetus to our ongoing vision: to invent new experiences for our customers around the world.

Aurelijus Liubinas, CEO, Deeper, UAB

It was easy to say “We focus on high quality” when we were a team of just 15 people. However, we believe that maintaining high quality standards while scaling a people-based service business is vital for sustainable growth. We achieve this by creating a calm, respectful and inclusive workplace that attracts the right kind of people – and lets them grow.

Bartosz Pietrzak, Szymon Boniecki, CEOs, Monterail Sp. z o.o.
