

ICT Law Czech Republic

Our legal services:

- Offering comprehensive legal support in the preparation or negotiation of software contracts;
- Preparing contractual documentation for the development of customised software solutions using various methods (waterfall, scrum, DevOps, lean, and others);
- Ensuring legal aspects in the implementation of technological solutions (including generative AI or new hardware means of virtual or augmented reality) also with regard to possible legal risks arising from individual projects;
- Offering legal analysis of software solutions licensing via SaaS, demo, and/or partner sales licensing and legal risk assessment for different growth options via different distribution channels;
- Assisting in setting up technology start-ups and in scaling up to global and cross-border projects;
- Addressing legal B2C obligations arising from the sale of digital products (digital content, services or products with digital properties) to consumers;
- Evaluating the legal aspects during the use of artificial intelligence and neural networks in the provision of technology services;
- Providing legal services in relation to the implementation of scalable e-signature solutions;
- Integrating remote identification methods into the company's products and services (e.g. using Bank Identity) and digitally archiving the resulting electronic documents.
