Strategy and execution – who holds the reins?  
Survey
Who holds the reins?

Results at a glance

“What do successful companies do better than their less successful competitors? … Is it the strategy itself? The ability to execute it? Management’s commitment?”

This survey focuses on the strategy process and the commitment of the main actors, i.e., CEOs, CFOs and strategists in the process. It particularly emphasizes the strategic planning phase, which has been identified as one of the major areas for improvement. The survey also examines how successful companies differ from less successful ones, especially in terms of the quality of the strategy process and the commitment of the main actors.

In general, the quality of the strategy process is judged critically, with particular emphasis on strategic analysis, i.e., the principles of strategy development, and monitoring the execution are seen as areas of improvement.

The commitment of the actors differs distinctly and also displays clear patterns with regard to company success:

• CEOs are highly involved in all phases of the process. Their colleagues expect even more enthusiasm in strategic analysis and the development of strategy. It is generally true that the CEOs of successful companies display significantly more enthusiasm in these areas than their less successful counterparts. The CEOs of successful companies display distinctly more commitment not only to the development of strategy but also to the stage of strategic analysis.

• CFOs are on the whole rather reluctantly involved. Their colleagues, in particular the CEO, expect more commitment, above all in strategic analysis and the monitoring of execution. The CFOs of successful companies display distinctly more commitment not only to the development of strategy but also to the stage of strategic analysis.

• Strategists are clearly focused on their core tasks, i.e., strategic analysis and the development of strategy. However, their colleagues expect greater commitment, in particular in planning the execution of strategic measures. It is precisely here that the strategists of successful companies display above-average commitment.

Expectations and recipes for success are varied. It is nevertheless easy to see that successful companies profit from a higher quality of the strategy process as well as from greater enthusiasm on the part of the main actors.

We wish you interesting and informative reading!
Introduction and overview
The survey focuses on two success factors for companies:

- How do the actor and the process influence the company’s success?

Our understanding of the four success factors:

- **Actor** includes the persons and roles involved in a company’s strategy process and their organisational structure. This includes not only operational staff, management and directors/CXOs but also supervisory bodies.

- **Process** means the totality of all phases of the strategy process from the analysis of frame conditions through to the development of the strategy up to the planning, implementation and monitoring of the strategy.

- **Culture** includes a company’s behavioural success factors, from the ability to innovate to the creation of an appreciative and execution-oriented environment. This includes, among other things, motivation, willingness to accept change and participation in the company’s orientation and success.

- **Technology** includes not only the direct tools of the strategy process in the company – from monitoring and data analysis to communication and networking – but also the role that technology plays in the value generation of the company as such.
The survey assumes an ideal-typical strategy process:

Four phases, each with core activities, form a common theme throughout the survey:

1. **Strategic Analysis**
   - A uniform understanding of the internal and external initial position is created within the framework of the strategic analysis. This provides the conditions for the development of options for strategic action.
   - Options and scenarios are worked out and evaluated in the development of strategies. They are the basis of a ready-to-vote Strategy Paper which summarises goals and needs for action both from the qualitative and from the quantitative/financial points of view.

2. **Execution Planning**
   - Execution planning supplies the concretisation of higher-level needs for action into initiatives or actions for individual business units. In addition, measurability must be established, which will enable strategy to be anchored in individual objectives agreements.

3. **Execution Monitoring**
   - Execution monitoring is the regular comparison of the progress of measures and attainment of objectives with the execution plan. The initiation of corrective measures falls under this phase. The initiation of new strategy approaches may become necessary, for example if underlying conditions change.

4. **Communicate strategy and priorities**
   - Communicate strategy and priorities:
     - Formulate and resolve strategy
     - Set goals and provide incentives

Success factors in each process phase:

- A holistic view, from the analysis through to execution monitoring*
- Clear focus on the material results of each process step

---

* Execution of strategy: do you have the topic under control? Deloitte 2010/2011

Deloitte Center for Strategy Execution – Survey
The survey examines the roles of the actors in the strategy process.

CEOs, CFOs and strategists form the basis for the role-specific analyses.

Involvement in the strategy process is multi-layered:

- CEOs, Executive Board chairpersons, General Managers and Heads of divisions are typically directly and decisively involved in the entire strategy process.
- Nowadays, CFOs, Financial Directors, Commercial Managers and Heads of Controlling are likewise decisively involved in the strategy process.
- Strategists, Heads of Strategy or management functions such as product strategy and company development are decisively involved in strategy by virtue of their roles.
- CXOs, i.e., other Directors and General Managers, as managers, are equally involved in the process and are grouped with the CEOs.
- Managers as a whole are not examined separately but are participants in every phase of the process.
- Staff are involved in the process in an associative capacity or capacity, depending on the company.
- The Supervisory Board or other internal or external supervisory bodies can be involved directly or indirectly in the strategy process, depending on the company.
The survey is based on four separate analysis components.

1. The strategy process
   - Where do the actors see potential for improvement in the strategy process?

2. The actors compared
   - How do the actors contribute to the strategy process?

3. The actors in detail
   - Expectations from the others
     - What does he/she expect from his/her colleagues and to what extent are the expectations met?
   - Recommendations for you
     - What do actors in successful companies do differently?
   - Assessments of role and process
     - How does each actor involve himself/herself and how does he/she assess the potential?
   - Expectations by the others
     - What do the others expect and where are expectations far apart?

4. Actors and archetypes
   - What types of actors are there? Which are especially successful?

#### Assessment of the quality of the strategy process
- The strategy process is predominantly viewed in a critical manner, although participants have differing emphases:
  - Strategic analysis is judged by CFOs and CEOs to be in major need of improvement.
  - Overall, the respondents judge strategy development less critically.
  - All participants see potential for improvement in execution planning and monitoring, especially for strategists.

#### Main emphases of involvement in the strategy process
- The above points hold true for all phases:
  - CEOs are intensively involved in all phases of the strategy process, particularly in execution monitoring.
  - The CFOs’ focus is mainly on execution monitoring.
  - Strategists focus strongly on their classic areas of responsibility: strategic analysis and strategy development.

- CFOs have expectations regarding the commitment of CEOs in the areas of strategic analysis and strategy development. They consider themselves responsible for execution monitoring.
- CEOs and strategists expect a distinctly greater commitment from the CFO in the area of strategy development. Only in the area of execution planning does the CFO's commitment meet their colleagues' expectations.
- CEOs and strategists quite clearly see the CFO's main focus in execution monitoring and expect correspondingly distinctly greater commitment in this phase.
- The CFOs of successful companies in general display greater commitment in all phases of the strategy process.
- The CFOs of successful companies concern themselves more intensely with strategic analysis and strategy development in particular.
- CFOs with the greatest company success on average – as “visionaries” – are strongly involved in strategic analysis and strategy development. CEOs ranked them as most committed in the whole process.
Survey results at a glance (4/4)
The strategist: process evaluation, understanding of role and success factors – in brief

- The strategist clearly shows commitment in the classic areas of responsibility of strategic analysis and strategy development.
- The strategist sees potential for improvement in execution planning and monitoring progress, however, CEOs and CFOs are only committed to a lesser extent.
- CEOs and CFOs expect greater commitment in strategy development, on the other hand, strategists exceed the expectations in execution monitoring.
- Expectations from CEOs in the execution planning and monitoring phases are distinctly greater than the present commitment of the colleagues.
- CEOs and CFOs expect greater commitment on the part of the strategists in the strategy development and execution planning phases.
- In strategy planning and execution monitoring, the strategist's involvement corresponds to the other actors' expectations.
- The strategists of successful companies involve themselves clearly more strongly in selected phases of the strategy process than their colleagues.
- The strategists of successful companies concern themselves more intensely with the analysis of the strengths and weaknesses of their own company.
- The strategists of successful companies are committed more to strategy as an end in itself – their colleagues are generally and primarily involved in the strategy process from vision through to action.
1. The strategy process
The strategy process is not running smoothly
Considerable room for improvement is seen in all phases

Major concerns on potential and implants

- More than half the respondent companies see major room for improvement in all phases of the strategy process. Execution planning and monitoring are assessed critically, with almost the comparable and considerable room for improvement.

<table>
<thead>

<td></td>
</tr>
</tbody>
</table>

66% 51% 57% 65%

66% 51% 57% 65%

The results vary considerably in the company context concerned: facts and assessments

Effect of group structure:

- Parent companies see the greatest need for improvement across all phases in comparison to financial and management holding companies.
  - On the one hand there is a possibility that structures are not clear enough to construct the phase transitions successfully, or on the other hand there is simply no crackdown.

- Basically, companies with a stronger central steering culture see more major challenges in the process.
  - This can be because the transmission and integration of the organisation does not succeed, or because there is no understanding and consistency in tracking.

Differences in the sector context:

- Companies in the financial services area see more room for improvement in strategy development.
  - Not surprising, as the development of scenarios in the currently highly volatile financial sector represents a special challenge.

- Sectors characterised by regulations such as energy and telecommunications see particular room for improvement in execution planning.
  - Continual changes in legislation can complicate thorough, detailed planning of the measures to be implemented.

The role of company size:

- Small companies on average see greater room for improvement in strategy development.
  - Resources and time are possibly lacking, whereas large companies can employ their own strategy departments.

- By contrast, execution planning is the bigger challenge for large companies.
  - Perhaps an indication that the coordination effort hampers execution to a special extent.
The actors perceive different ‘construction sites’

Assessments vary widely, depending on the role and the phase of the strategy process.

- Facts and figures are lacking.
  - In strategic analysis, great room for improvement is seen above all by CFOs. A phase in which they traditionally influence only via internal analysis. CEOs also see the most important starting point here.

- No grounds for complaint.
  - The assessments are the most similar in strategy development. What is striking is the self-critical attitude of the strategists towards their natural domain: strategy development. The colleagues see only minor potential for improvement here.

- The strategy is not hitting the ground.
  - Strategists see very much room for improvement in execution planning, in other words when they typically hand over the topic and must rely on the organisation. Many CEOs and CFOs also see major potential here, however the strategists are clearly the most critical group.

- Discipline in monitoring must be insisted on.
  - In the area of execution monitoring, the CFOs and strategists are largely in agreement, but CEOs, too, assess the ability of monitoring to improve as being high. Despite great unity, the strategists on the other hand – with 68% – are conspicuous as a particularly critical group.
Improvements in the strategy process obviously pay off.
Successful companies perceive higher quality in all phases of the strategy process.

- Successful companies see less room for improvement in all phases of the strategy process. The quality of the strategy process appears to have a distinct payoff in company success. It is remarkable that 52% of successful companies see great potential in strategic analysis and implantation monitoring – i.e., at the beginning and end of the process. On the other hand, a clearly smaller proportion of successful companies see a need for action in the areas of strategy development and execution planning.

- While the assessment of strategic analysis is nearly uniform, the assessments in the subsequent phases diverge distinctly. Process quality appears to have a critical success pay-off in the area of execution planning.

- Against this trend, less successful companies see considerable potential in strategy development and execution planning, while successful companies are more likely to be satisfied in these respects.

- Less successful companies should focus in particular on planning and monitoring when improving the strategy process, as disproportionate room for improvement is seen here and an effect on company success is to be assumed.

2. The actors compared
Is the process a top-level issue exclusively?
CEO are highly involved in all phases of the strategy process. The comparatively leading role in execution planning and monitoring is surprising.

Does the strong reticence of the ‘paymaster’ in the strategy process promise success?
CFO do not take the lead in any phase. The focus is on execution monitoring.

Does execution really not matter to strategists?
Strategists have a strong focus on their classic areas of responsibility. With a clear claim to leadership here, while subsequently involvement clearly sinks.

The actors display distinctly differing commitment
CEO get involved consistently – their colleagues follow classic role models.
3. The actors in detail
3.1 The CEO
Strategy and execution are obviously a top-level issue throughout – CEOs have above-average involvement in all phases of the strategy process if at all, CEOs ‘let go’ in execution planning and trust the organisation’s ability to plan the right actions. Albeit at the price of an obviously all the more tight monitoring – CEOs see themselves relatively and absolutely most intensively in demand here.

Strategy development as a showpiece discipline? – More than half of the CEOs are convinced that there is only minor room for improvement in strategy development, the commitment of the CEOs obviously pays off in this phase.

Problems with monitoring? – The picture with execution monitoring is surprising – here we find a relatively large need for improvement coupled with the most intensive involvement across all phases of the strategy process. In the opinion of the CEO, other actors should make a major contribution here too.

The CEO: assessments of role and process

Obviously nothing works without the CEO – despite commitment, much potential is seen.

<table>

<td>59%</td>
</tr>
</tbody>
</table>
Strategists need to catch up in the showpiece discipline:

- CEOs demand the classic role model from strategists.
- While the high expectations in strategic analysis and the low expectations in execution monitoring are to a large extent fulfilled, expectations in the showpiece discipline of strategy development and also in execution planning clearly diverge.

87% of CEOs expect the strategist's intensive involvement in strategy development, distinctly more intensive than they see themselves involved.

In all phases, CFOs involve themselves less than expected:

- CEOs see no real role for themselves above all in strategic analysis, although 76% of them demand strong involvement of the CFOs here.
- Only a third of the CFOs are heavily involved in execution planning also, although nearly half the CEOs expect heavy involvement.
- Even in the case of the focus on execution monitoring, claimed by the CFOs, expectations diverge considerably. CFOs are thus in demand throughout – at least in the management of expectations.

### The CED: expectations from others

CFOs and strategists barely meet the CEO's expectations:

<table>
<thead>
<tr>
<th>CEOs' expectations of CFOs</th>
<th>Involvement of strategists</th>
<th>Does the commitment of the others correspond to the CEO's expectations?</th>

</tr>
</tbody>
</table>

CEO: expectations from others

CFOs and strategists barely meet the CEO's expectations.
Colleagues' expectations from CEOs are to a large extent similar in the strategy development, execution planning and execution monitoring phases. CFOs and strategists expect virtually the same commitment from CEOs, only in the strategic analysis phase do CFOs wish to see distinctly more involved CEOs than strategists do.

- Concentration on analysis and development: Both colleagues expect even stronger commitment in strategic analysis and development than CEOs.
- On track in execution planning: commitment in execution planning corresponds to expectations.
- Is less more? While CEOs place their emphasis on execution monitoring, colleagues expect a distinctly lower commitment.

From the colleagues' point of view, even more is expected in strategy development.

The CEO: expectations by the others

From the colleagues' point of view, even more is expected in strategy development.
Recommendations for action

• Take the whole strategy process seriously. The CEOs of successful companies are more active throughout all phases of the strategy process than the CEOs of less successful companies.

• Look around you. CEOs look significantly more closely at the market and the competition, whereas no difference is noticeable in the analysis of the strengths and weaknesses of their own company.

• Look into the future. The CEOs of successful companies lay special value on the development of scenarios. Here, 45% of CEOs are highly committed, while only 17% of the CEOs of less successful companies are active here.

• Communicate the strategy actively and credibly. The CEOs of successful companies take communication seriously: 77% are intensively involved here, while only 42% of the CEOs of less successful companies are active here.

• Trust your organisation. Execution planning is obviously not a distinguishing characteristic for CEOs. Indeed, restraint in monitoring appears to be called for – thus delegation and room for manoeuvre for the organisation are a genuine success factor for CEOs.
3.2 The CFO
• Everything under control? – Overall, CFOs involve themselves slightly to moderately, only in execution monitoring do they see themselves as having a clear participation in the process. It is interesting that precisely at this step of the process most CFOs see the greatest room for improvement – perhaps ‘more CFO’ could help at this point.

• More commitment to the analysis – while more intensive commitment to execution monitoring correlates with considerable room for improvement, strategic analysis shows a completely different picture: CFOs see almost similar large room for improvement, but they themselves are hardly involved.

• Focus on planning too – the picture in execution planning is similar. The involvement of CFOs is below-average here too, but they perceive relatively distinct room for improvement – whether they are really the key to the solution, their reticence is part of the problem, or they are simply pointing to the right places in the process is worth examining.
Strategists fit quite well into the CFOs’ pattern:

- CFOs demand and receive a lot of analysis, less development and hardly any execution from the strategist.
- CFOs want strategists above all for analysis – 89% of CFOs expect intensive involvement of strategists in this phase.
- In execution planning, the CFOs expect heavier involvement by the strategists than at present, 64% of CFOs even expect distinctly more intensive involvement, whereby, overall, reticence dominates.
- Remarkable that more is expected in planning precisely from the strategists, while CEOs obviously meet expectations at a mid-level.

CEOs set their emphases wrongly or differently:

- CFOs expect strategy, CEOs give monitoring. In execution planning, one meets at mid-level.
- Focus on strategy – 73% of CFOs expect strong CEOs in analysis and strategy development. Even more here than the strategists themselves.
- Reticence in execution – the expectations of the CEOs in execution are in all very reticent – here the CFOs tend rather to see themselves in demand. Conspicuously, CEOs see themselves as being materially more heavily involved.

The CFO: expectations from others

Especially the CEO does too much, or too little, in short: not what he should – that’s what CFOs think.
The reticence of the CFOs does not correspond at all with colleagues’ expectations. A more intensive involvement of CFOs in almost all phases is demanded by CEOs and strategists with a surprising consensus – in strategy development the CFOs’ moderate involvement seems to correspond to the expectations of the others. Strategic analysis obviously needs the expertise of the CFOs – in particular strategists would like to see CFOs more intensively involved here. Indeed, more than half the strategists require a distinctly more intensive commitment – it remains open whether an attempt to shift responsibility is being made or genuine team play initiated.

• Whoever wants to monitor later on must also be on board at planning time – at least that’s how CEOs and strategists see it, 50% and more of whom demand the greater involvement of CFOs in execution planning. However, only 34% of CFOs fulfil this expectation, in particular CEOs expect distinctly more commitment here.

• Control is good – is more control better? CFOs have – if at all – positioned themselves as the lords of execution monitoring – but it is precisely here that they are placed with unambiguously expectations of CEOs and strategists, who unanimously demand distinctly more intensive involvement or CFOs in this phase of the strategy process.
The CFO: recommendations for you
The CFOs of successful companies are more active all round

Participate actively. The CFOs of successful companies are more involved in all phases of the process than the CFOs of less successful companies – it seems it’s not about distinguished reticence but about well-measured and focussed commitment.

Help to shape. 63% of the CFOs of successful companies are intensively involved in the development of options and scenarios already in the strategic analysis phase; at less successful companies it is only 19%.

Lend a hand in the execution process. Whoever wants to monitor must participate at least in determining measurement indicators and milestones at the execution planning stage, like the CFOs of successful companies. This then also results in a rounded-off picture when the regular follow-up on tracking target achievement and strategic progress is involved – that seems to succeed for the CFOs of successful companies as a coherent process.

Potentials and fields of action for CFOs

- Analyse market and competition
- Analyse strengths and weaknesses
- Develop options and scenarios
- Evaluate and prioritise strategies
- Accompany specification of strategy
- Determine measurement indicators and milestones
- Regularly verify target achievement
- Formulate and resolve strategy
- Set goals and provide incentives
- Initiate strategy adjustments
- Communicate strategy and priorities

Recommending for action
3.3 The strategist
Strategists are strategists from head to foot, and that's all

- **Strategists are very strategic** – the classic role distribution assumes strategists are particularly heavily involved in analysis and strategy formulation. Execution planning and monitoring play a distinctly subordinate role.

- **Concern about strategy execution** – strategists appear to be concerned about the fruits of their work. More than two thirds of the strategists see great room for improvement in execution planning and monitoring, the phases in which the strategists are more reticent. More than one third of the strategists see great need for improvement in strategic analysis and strategy development, the phases in which the strategists are intensively involved. These are the areas where strategists are conventionally located. The less the strategists are involved, the greater their concern for improvement in those phases, while the strategists are comparatively tolerant. The less the strategists are involved, the more they see the potential for improvement.

- **Where do strategists see room for improvement?**

- **Execution planning**
  - Intensively: 68% need for improvement
  - Little: 72% need for improvement

- **Strategy development**
  - Intensively: 53% need for improvement
  - Little: 51% need for improvement

- **Strategic analysis**
  - Intensively: 50% need for improvement
  - Little: 50% need for improvement

- **Execution monitoring**
  - Intensively: 61% need for improvement
  - Little: 39% need for improvement

The strategist: assessments of role and process

The strategist is the strategist from head to foot, and that's all.
From the strategist's point of view, CFOs don't take strategy seriously enough – in all phases they expect greater commitment from the CFOs.

There is a considerable gap in expectations already at the strategic analysis phase, similar to the one in execution planning – 89% of strategists expect committed CFOs.

78% of strategists see execution monitoring as a core competence of CFOs, which indeed tends to be confirmed by CFOs. However, there is a considerable gap with regard to the intensity expected by the strategists.

CEO involvement and monitoring should be accompanied more intensively by CEOs; for monitoring the strategists see the CFOs, not the CEOs, clearly in the lead.

Does the commitment of the others meet the expectations of the strategist?

Involvement of CEOs

Strategists' expectations of CEOs

Involvement of CFOs

Strategists' expectations of CFOs

Strategy development

Execution planning

Execution monitoring

Strategic analysis

The strategist: expectations from others

Basically, it's all wrong – from the strategist's point of view.
CEOs and CFOs agree that the strategists’ focus on analysis is not sufficient – the presence and commitment of the strategists is valued extremely in strategy development and also in the subsequent process phases.

- Strategic analysis creates quantitative facts – from the CFOs’ point of view, the strategists should become even more intensively involved in strategic analysis; however, CEOs’ expectations are already met.

- The CEO needs You! – CEOs wish for distinctly more intensive commitment from the strategists, particularly in development, but also in execution planning – when it comes to monitoring, the strategists apparently display exactly the right commitment from the CEOs’ point of view.

- CFOs consider the strategists’ commitment to be close to their ideal – only in execution planning do CFOs perceive a somewhat more intensive commitment, albeit at a low level overall. If only this agreement were mutual, this could be the starting point for genuine team play between strategists and CFOs.

The strategist: the expectations of the others

Strategists ought to initiate and manage but by all means keep their eye on the ball afterwards.

Recommendations for action

• Involve yourself more heavily at selected points. The strategists of successful companies are more committed overall than the strategists of less successful companies, but with a clear focus on selected activities.

• Don’t underestimate the inside view. The strategists of successful companies concern themselves intensively with the analysis of the strengths and weaknesses of their own company in particular.

• Practise restraint. Successful companies’ strategists are distinctly less involved in the evaluation and prioritisation of strategies than the strategists of less successful companies.

• Help downstream. Successful companies’ strategists invest especially in the communication of strategic priorities. They contribute distinctly more in this area than the strategists of less successful companies do.

• Share your knowledge. When things get more concrete, successful companies’ strategists are distinctly more involved in execution planning than their colleagues.

The strategist: recommendations for you
Concentrate first on your core responsibilities, then on the others.

4. Actors and archetypes
Derivation of the four archetypes

The four phases of the strategy process can be compressed into two stages:

- **“Vision”** – strategic analysis and development
- **“Action”** – execution and monitoring

Depending on the intensity of the involvement in the two dimensions we distinguish four archetypes:

- **“Observers”** are neither noticeably “visionary” nor especially “active”, i.e. they are rather restrained in the whole process – at 35% a relatively large group.
- **“Visionaries”** are heavily involved in strategic analysis and development and to a large extent hold back in execution – the second largest group in the field.
- **“Doers”** are heavily and exclusively involved in execution planning and monitoring – at 15% by far the smallest group of the 211 participants.
- **“All-rounders”** are continuously and intensively involved throughout, from ‘vision’ to ‘action’ and represent, with 24% of the participants, a group as nearly as large as that of the observers.

The focus and intensity of the commitment of the actors points to the four archetypes

Four types, observers, all-rounders, visionaries and doers are observed.
Each archetype displays a clear pattern in relation to the company’s success.

Visionaries and all-rounders obviously have an advantage.

Commitment to execution planning and monitoring
Commitment to strategic analysis and strategy development

Visionaries and all-rounders show the greatest success for the company – they hold the reins.

• CEOs confirm the trend: among all CEOs, the visionaries bring the highest success for the company. Intensive commitment in strategic analysis and strategy development obviously has a positive effect on company success.

CFOs are surprising: In the CFO group, it becomes apparent that the intensive commitment of strategic analysis and planning obviously has a positive effect on average above-average target achievement for the company. The all-rounders group is equally successful among the CFOs, i.e. the group of CFOs who show above-average involvement in all phases of the strategy process.

• Strategists are in demand: The picture for the strategist group is clear. The all-rounders among the strategists show on average the greatest success in achieving their targets – and as a result stand out distinctly against the other three archetypes.

Archetype with the greatest average company success per group of actors

CEOs with the greatest average company success
CFOs with the greatest average company success
Strategists with the greatest average company success

Deloitte Center for Strategy Execution – Survey
About the survey
Participants polled
In all, 211 company representatives took part in the survey.
- 56 CEOs: Executive Board chairpersons, other Directors, General Managers and Heads of divisions
- 59 CFOs: Financial Directors, Commercial Managers and Heads of Controlling
- 96 Strategists: Heads of Strategy, Heads of Company Development, etc.

Sectors polled
45% very large companies (>5000 employees)
28% large companies (>1500 and < 5000 employees)
27% small and medium companies (<1500 employees)

Parent company:
- Direct influence by upper management on business units

Management holding:
- Only major management tasks are managed centrally

Financial holding:
- Only financial targets are managed centrally

Sector participants:
- Representatives of small, medium, large and very large companies were polled in the survey.
- Two thirds of the participants were from large or very large companies.
- In all, 211 company representatives took part in the survey.
- The majority of the companies polled can be assigned to the following seven sectors.
- The manufacturing companies and the consumer goods industry sectors form the largest groups.
- The manufacturing industry sector consists of 31% of the participants.
- The consumer goods industry sector consists of 11% of the participants.
- The other sectors are Energy & Resources (6%), Technology, Media & Telecommunications (9%), Other (10%), Consumer Business & Transportation Business (25%), Financial Services (11%), and Manufacturing (31%).
About ourselves
Take up the reins!
Deloitte Center for Strategy Execution

Our experience
We offer innovative strategic approaches and deep, functional and sector-specific expertise. This enables us to address your unique development in your endeavors to provide sustainable solutions for strategy execution.

We support you
- in formulating and prioritising your strategic goals
