Virtual CIO Transition Lab

The CIO Program

An immersive virtual experience to map the next six months of your journey

In today's high-demand, high-risk, and cost-restrictive environment, with competing priorities and constant technological evolution, the role of the chief information officers (CIOs), chief technology officers (CTOs) and IT executives (referred to herein as "CIO") has expanded and become more complex. CIOs across the globe are being called upon to carry out expanded leadership roles—capturing the full value of IT-driven business models and leading transformational change within their own organizations. Given these demands, it is not surprising that CIO turnover is at an unprecedented rate.

The CIO Program brings together a multidisciplinary team of Deloitte leaders and experienced professionals to help CIOs get ahead—and stay ahead—in the face of growing challenges and demands. Whether you are a new or seasoned CIO, whether new in your organization or role, or if you simply need to pivot to meet evolving business demands, the CIO Program can help you prepare for your specific transition.

The CIO Virtual Transition Lab is an experience designed to help CIOs hit the ground running and develop a plan for success. The Lab agenda focuses on the three most important resources a CIO must manage: time, talent, and stakeholder relationships.

Deloitte's Executive Transition Program conducted research with more than 100 executives from Fortune 1000 companies. Our research uncovered hidden insights about why transitions succeed, and why they frequently fail. The CIO Transition Lab has been built around proprietary research Deloitte has done to capitalize on those insights, and culminates in a plan for you to:

- Define and communicate your **priorities**
- Assess and develop a **talent strategy**
- Understand and influence **key stakeholders**
- Develop an **action plan** for your next 180 days

Examining your focus on time, talent and relationships

From juggling unexpected demands to shaping the right team, our research found that new CIOs are faced with many obstacles as they transition into their new leadership roles. Our Transition Lab agenda is focused on the three most important resources a leader must manage as clear drivers of success (or failure) in every transition: time, talent, and relationships.

Resources

In the Lab...

Time

Crushing new demands will be made on your time, and you must treat it as your most valuable asset. What are your priorities, where do you want to spend your time, and how will you enforce that?

We will identify your forward-looking priorities and classify the urgency and importance of each.

Talent

Accelerating the capabilities of the talent on your team helps to drive better value and allows you to re-allocate your time, for the best use of your time. Often, the CIO's biggest regret is not moving fast enough on his or her talent challenges and opportunities.

We will examine capabilities and bandwidth of direct reports, as well as the scope and efficacy of reporting relationships.

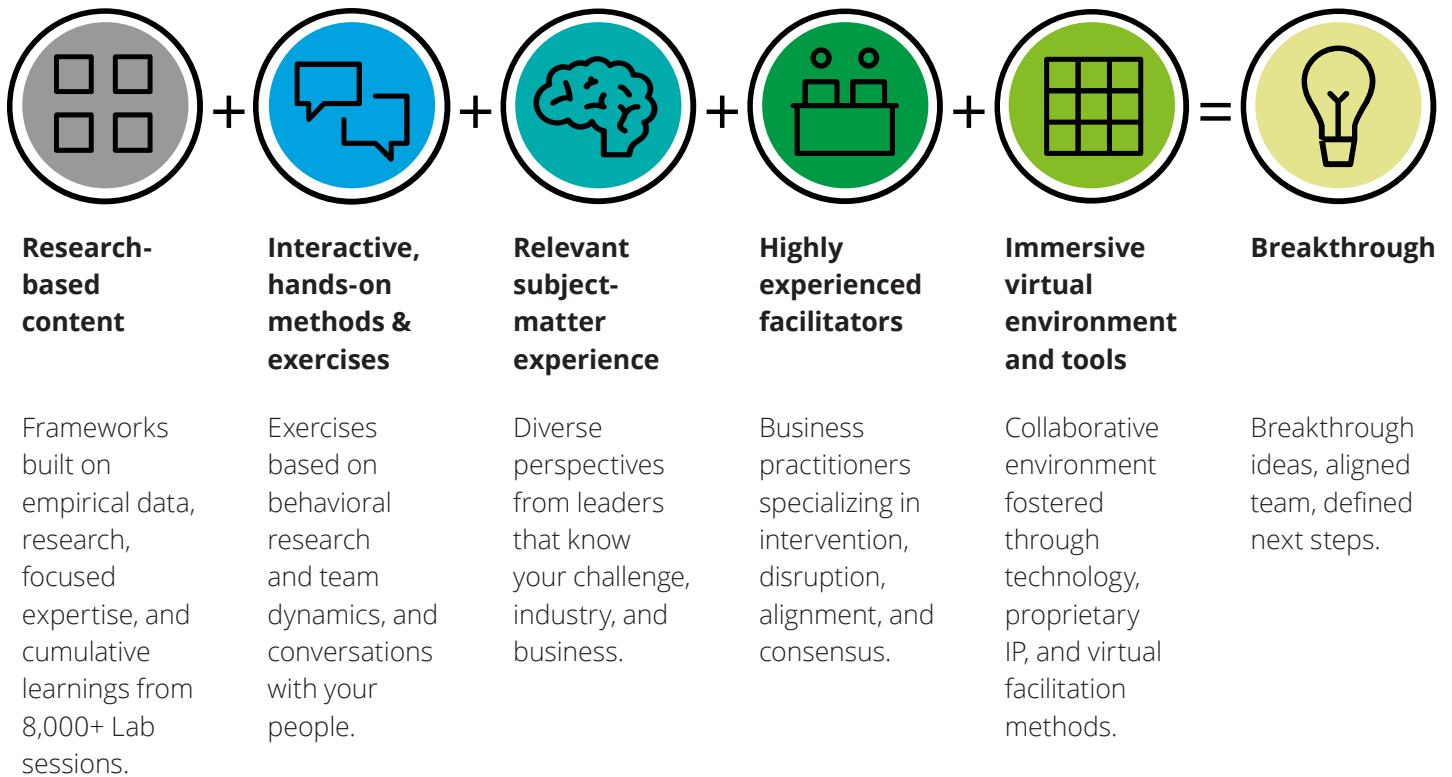

Relationships

CIOs who didn't make time to cultivate critical relationships later found those people became stumbling blocks. Who are your important stakeholders, and how will you communicate with them?

We will focus on the strengths of specific relationships and influence strategies important to a CIO's ability to achieve the priorities.

As a result, we will support the CIO in the Lab to create a 180-day action plan with specific, achievable milestones.

The Lab formula

Your one or two days in the Virtual Transition Lab

Hopes, fears, and legacy ... Start with your aspirations

To leave your mark, you first need to identify your goal. It starts with aligning where you want to go with where the organization needs to be in an unbiased environment.

The four faces of the CIO ... Consider where you spend your time

There will be endless demands on your time. The most successful CIOs determine early how to balance their time and energy across four critical roles.

Talent and skills ... Assessing your team

Getting to the heart of talent issues quickly is at the center of every transition success story. Figuring out the team members who will advance your priorities is critical and needs to occur in an unbiased environment.

Stakeholder analysis ... Examine relationships and influence

From managing relationships with key stakeholders to those within your IT organization, success will come from having a plan. You need to connect with and establish relationships with people who matter right away. Consider how you can further their agenda, as well as gain their support for tackling your biggest challenges.

Moving from intent to action

Your Lab experience is designed to culminate in the creation of a 180-day plan, custom built around the top priorities you identify in the Lab. Key inputs into this plan include the actions and activities you identified as critical to help you build the right team and cultivate the support of your stakeholders.

The plan will include relevant organizational milestones as well as early wins and issues that require urgent attention. It will also lay out long-term priorities important to the success of the organization and your legacy as a chief information officer, chief technology officer, and/or IT executive.
