The Cloud is not just another method for delivering your information technology needs. It is a technological leap into a new environment that will move you from the status quo into a world of business innovation and possibility.

While moving from legacy systems to Cloud-driven solutions can be a complex undertaking, the result will be a transformed organization that's primed for growth.

Steps to Cloud success

Moving your technology applications from your legacy infrastructure to the Cloud is a major undertaking, and one that needs to see the best possible return on investment.

Here are some steps you'll need to take on your journey to the Cloud—and to a dynamic, high-performance future.

- 
Lay the groundwork. Create a strategy for how your organization can exploit the Cloud, create a business case, design a Cloud architecture and put in place governance and policies to manage the new world.
- 
Architect the migration approach. Think about which of your existing on-premise applications to migrate to the Cloud, which applications should be re-built using Cloud native technologies and which should be bought from Cloud SaaS providers.
- 
Re-imagine ways of working. Engage the entire business to re-imagine the way work gets done and how new products and services are brought to market, all enabled by Cloud technologies.
- 
Innovate in delivery. Embrace new agile ways of working, enabled by new Cloud tools, to deliver your Cloud solutions.
- 
Integrate. Consider how to integrate the Cloud into your enterprise through infrastructure and networking solutions to connect, optimize, and manage Cloud solutions across a wide choice of platforms.
- 
Managed services. Ensure your use of the Cloud is secure, resilient, compliant, cost effective, and properly service managed, consider the use of a Cloud Managed Service Provider.
