The power of a cloud-connected business

Deloitte + Oracle

The power of cloud is on full display. From remote working to digital finance to dynamic supply chain management, companies around the globe are turning to cloud to navigate disruption. Many companies that are further along the digital transformation curve have already seen their cloud strategies pay off in the form of greater business continuity, innovation, and agility. Many of those in the earlier stages of cloud thinking now see an urgent need to improve efficiency, performance, and adaptability by freeing themselves from outdated processes and technologies.

Whether you're working on a cloud pilot or pushing ahead with full migration, the global alliance between Deloitte and Oracle can help you develop and execute a cloud strategy with purpose. From business models to process design to technology implementation, our team understands what it takes to modernize your operations, integrate your data, and unite your workforce. Our goal is not just to help you connect your entire business, but to do so with impact.

Distinctions that matter

Oracle is one of the few vendors that has the ability to connect your entire business through a unified suite of cloud applications and platform services. Deloitte is one of the few consultancies that can help your organization to transform and innovate continuously with Oracle Cloud products.

Deloitte has been working with Oracle for more than 25 years and is a consistent winner of multiple awards. With global capabilities, we can help you realize the possibilities of Oracle Cloud anywhere in the world. As illustrated in the accompanying use cases, we draw upon our industry know-how and multi-disciplinary capabilities to develop solutions both broad and targeted, often using analytics, robotic process automation (RPA), and other advanced digital technologies to drive value.

USE CASE:

Suite solution

A global industrial distributor is using the suite of Oracle ERP Cloud applications to connect its business across finance, human capital, and supply chain. Charting the company's path to cloud involved business transformation, architecture simplification, and a multi-phased deployment based on an Agile approach. More than redesigning business processes and migrating to cloud, the company also sought to optimize its Oracle investment by building the capability to readily adopt the new technologies that would be made available in future releases. The solution has made the following impact:

- Established a single source of truth for financials, supply chain management, and human capital management by consolidating transaction data
- Improved responsiveness to shifting customer and market needs
- Enabled easier execution of an M&A-oriented growth strategy
- Modernized the technology platform as a foundation for further digitization and ongoing innovation, including regular uptake of new features and functionalities, and greater use of RPA and Platform as a Service (PaaS) offerings
- Simplified the application infrastructure resulting in millions of dollars in savings

The company engaged Deloitte to assist with its cloud journey because of its long-term strategic relationship with Oracle and knowledge of product development; its ability to assemble a global team comprising local resources; and its capacity to articulate the business value of the technology investment.

USE CASE:

Finance focus

A leading private investment management firm improved and streamlined financial reporting across three lines of business by migrating to cloud. The solution entailed improving the chart of accounts, redesigning reporting processes, cleansing and streamlining supplier data, and deploying Oracle Financials Cloud and Oracle Project Management Cloud as the main enabling technologies. The solution has made the following impact:

- Empowered end users to address many of their own reporting needs
- Accelerated monthly reconciliation and close processes
- Automated project cost and revenue reporting using Oracle Business Intelligence Publisher
- Streamlined employee expense management processes, which allowed several complex interfaces to be eliminated
- Reduced IT operating costs

The company engaged Deloitte to assist with the transformation, largely due to its knowledge of the finance function, financial services industry experience, and demonstrated project management tools, which were instrumental in driving value. For instance, the Deloitte team used its IndustryPrint™ leading-process maps, and its pre-configured Cloud Financial Services Industry (FSI) SolutionPrint™ accelerator to compress the project timeline, allowing the solution to be delivered in only seven months.

Rise above with proprietary cloud enablers

Wherever your organization is on the digital maturity curve, Deloitte has proprietary tools and frameworks that can help you accelerate innovation and significantly improve business performance. Deloitte Ascend™ for Oracle, for example, features a digital transformation framework, an underlying analytics engine, and a library of Oracle Cloud assets and digital enablers.

Operating outdated platforms and seeking to shed technical debt? Deloitte Ascend helps simplify and standardize core business processes while also bridging performance gaps through industry insights and leading practices. **Already on the path to digital transformation?** Deloitte Ascend provides leading practices across nearly 35 industries, as well as benchmarking and frameworks to help you instill a digital mindset and deliver continuous innovation.

Beyond Deloitte Ascend, we also offer:

- ELEVATE, an Infrastructure as a Service (IaaS) migration and delivery approach offered by Oracle Consulting and Deloitte
- Deloitte SuperLedger™ powered by Oracle Cloud, an integrated cloud platform for transaction processing and sub-ledger reporting without full ERP consolidation
- The Deloitte Digital Foundry Offering for Oracle Cloud, a methodology, framework and set of services that enable companies to make innovation continuous by bringing a disciplined approach to the innovation process
- Oracle Digital Experience Labs, an immersive experience in which Oracle Cloud and digital technologies are used to execute key business processes using real-life configurations and data
