

Integrated Material Cost Management

Drive OEM savings opportunities with actionable insights from purchasing, sales forecasting and actual spend data

Overview

Deloitte's Integrated Material Cost Management solution solves the disparate data issue, and drives savings insights. The app analyzes purchasing, sales forecasting and actual spend data in real-time, and present buyers with actionable price reduction opportunities. It removes all data gathering and follow up overhead, and guides enterprise functions through the process.

Features

Visibility to actual and future supplier spend by commodity, and pre-populates site price reduction initiation forms with part, price breakdown and volume data
Price reduction negotiation and approval workflow

One central platform for direct material actual and future spend, sliced by supplier site and commodity, giving stakeholders a single source of truth for spending facts and information that's quickly accessible in the cloud
Automotive revaluation of retroactively-approved price reductions

Single SAP Fiori® application to manage the end-to-end process from opportunity search and identification, to approval and KPI tracking
Track pre-negotiated year-over-year price reductions, and notify buyer to activate them

Reduces cost through design changes, and exposes hidden cost saving opportunities to buyers with robust analytics, while ensuring no supplier or commodity meeting reduction criteria is hidden

Better OEM collaboration with advanced workflow

Improves buyer productivity through automated workflows that remove information-gathering and reduce the time required to chase approvals

Drives cash flow through retroactive price reductions
