

# Vehicle Complexity Analysis

**Deloitte.**

**Pull deep insights with robust, real-time analytics capabilities to drive profitability**

## Overview

Deloitte's Vehicle Complexity Analysis solutions enables companies to view every available combination for configurable materials, and combines it with profitability metrics. With an advanced visualization-enabled dashboard that is intuitive, easy to use, and integrates SAP® S/4HANA® in real-time with on-prem solutions, users can perform product and sales analysis to ultimately reduce manufacturing costs.

## Features

REST APIs to search and read vehicle configuration, sales and financial data for external consumption

Ready-to-use with content pre-populated for vehicle permutation analysis, allowing user to identify all available combinations for sale

Search and analyze all sales, product and cost data by including material, batch and variant configuration attributes combined with financial reporting

Easily adapted to company specifics via customizable vehicle attributes and product data available

Advanced visualization for intelligent insights enabled by SAP® Analytics Cloud that can be integrated into SAP's Digital Boardroom

### Increase revenue with insightful configuration

Give stakeholders a single source of truth for vehicle sales and performance information, helping to define what configurations are accounting for the bulk of volume and profit

### Launch new products with collaboration and innovation

Enable collaboration and innovation across vehicle development and sales, allowing the business to make data-driven decisions with a focus on increasing profitability

### Eliminate negative profit drivers

Help product managers identify what combinations of features should be avoided in-market

### Improve profitability

Generate insights from vehicle and sales data to adapt existing product offerings to reduce costs and increase margins
