Beyond Fintech

Disruptive innovation in investment management

Background _____

A 2017 report from Deloitte and the World Economic Forum, "Beyond Fintech: A pragmatic assessment of disruptive potential in financial services," examines disruptive innovation in financial services.

The report identifies **8** key forces impacting all aspects of financial services:

Cost Commoditization: Financial institutions will accelerate the commoditization of their cost bases, removing them as points of competition and creating new grounds for differentiation

Experience Ownership: Power will transfer to the owner of the customer interface; pure manufacturers must therefore become hyper-scaled or hyper-focused

Data Monetization: Data will become increasingly important for differentiation, but static data sets will be enriched by flows of data from multiple sources combined and used in real time

Systemically Important Techs: Financial institutions increasingly resemble, and are dependent on, large tech firms to acquire critical infrastructure and differentiating technologies

Profit Redistribution: Technology and new partnerships will enable organizations to bypass traditional value chains, thereby redistributing profit pools

Platforms Rising: Platforms that of

Platforms Rising: Platforms that offer the ability to engage with different financial institutions from a single channel will become the dominant model for the delivery of financial services

Bionic Workforce: As the ability of machines to replicate the behaviors of humans continues to evolve, financial institutions will need to manage labor and capital as a single set of capabilities

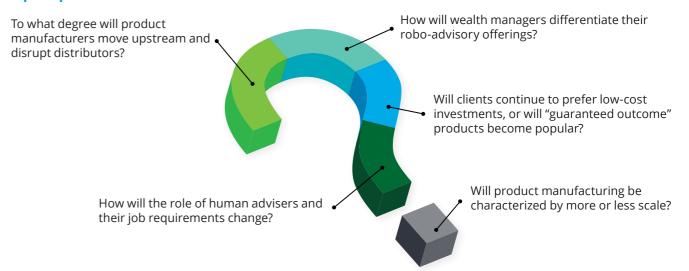

Financial Regionalization: Diverging regulatory priorities and customer needs will lead financial services in different regions of the world down distinct paths

Investment Management trends ______

Where disruption has occurred	As individuals assume more responsibility for their investments, robo-distribution has become the most compelling way to work with them.
	It takes fewer resources to deliver more investment advice, as middle and back office functions are increasingly automated or sourced out.
	The rise of low-cost products has made scale more important to product manufacturing, driving pressures for consolidation.
Where it hasn't	New entrants to investment management have struggled to gain market share as customers stick to existing providers and the cost of enticing them away remains high.

Open questions ______

Possible futures _

Certainty- based offerings	Growing profit pools in retail wealth lead to a renaissance of products that guarantee outcomes.	Customers will flock to products that offer more certainty. But it will take strong partnerships to manage the risks.
Advice as a differentiator	As robo-advice improves, investment advice becomes the main thing that determines a client's choice of institution.	Investment services will become more convenient but also less transparent for customers. Wealth managers will become more important.
Quality externalization	Rising costs force firms to either rely on external service providers or gain the scale to invest in differentiated technology.	Increasing standardization and industry bifurcation will create new opportunities as well as new threats.

Key takeways ____

Differentiation of offerings: Middle and back-office automation, combined with the growing ubiquity of robo-advisors, are turning investment advice into a commodity. As a result, leading firms will look for other ways to stand out from the competition—especially through more personalized customer offerings.

Advice-driven customer guidance: As robo-advisors become more available and sophisticated, investment management companies will draw on new sources of data to deliver advice on all aspects of their customers' financial lives. This will mark the start of their transition from robo-investors to true robo-advisors.

Role of human advisers: Human advisers will still be crucial to differentiate products, especially for customers with high net wealth. But the role of such advisers will shift from product selection to customer engagement, emotional intelligence, and decision support.
