

**IFRS 17 Valuation Architecture
and System Design**

18 September 2018

Agenda

Agenda Items

Speaker

Introduction

Ciara Regan

Overview of actuarial system architecture

Brendan Guckian

System architecture impacts due to IFRS17

Joanne Lonergan

IFRS17 architecture challenges and pitfalls

Brendan Guckian

System implementation programs

Simon McCann

Actuarial Modelling Centre of Excellence

Marc Fakkell

Valuation
Systems
Architecture
Overview

Brendan Guckian

Current end-to-end architecture

Multiple runs

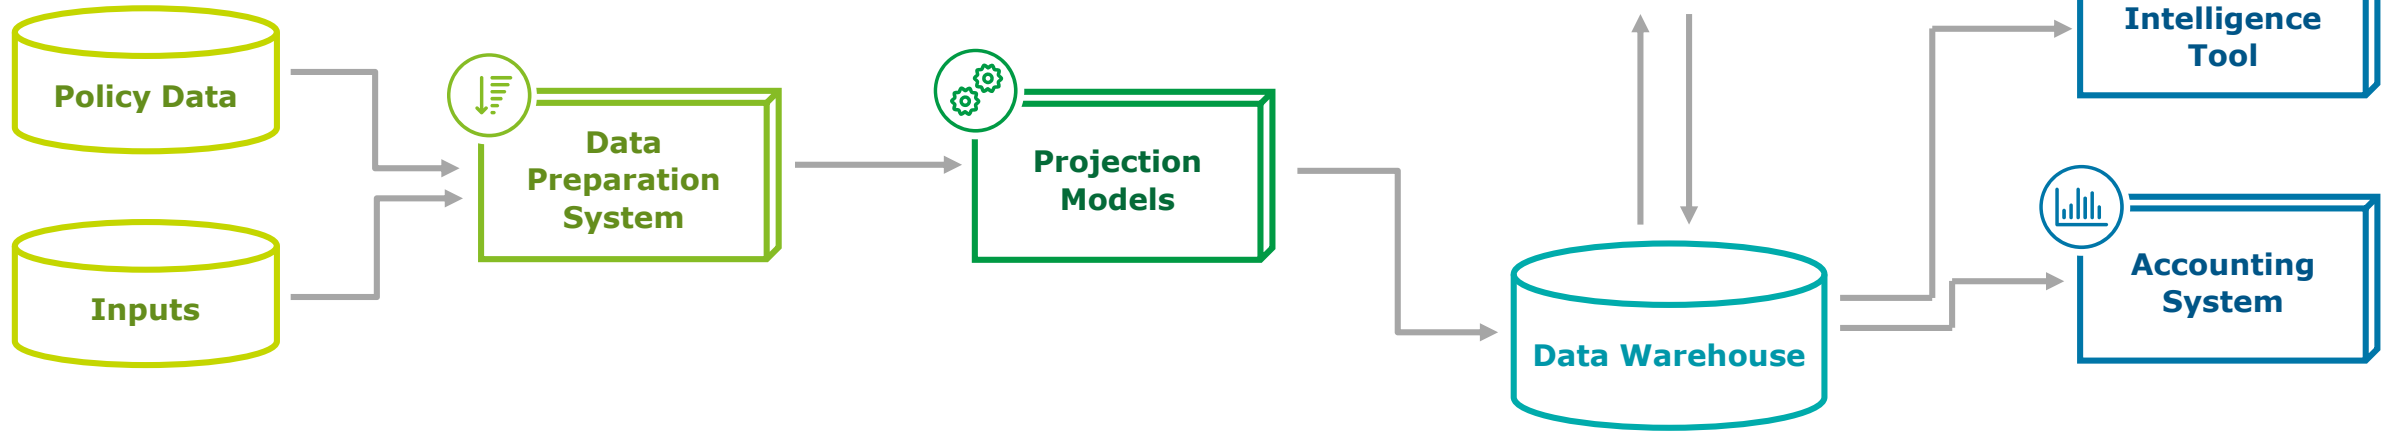

- × Multiple model runs required to generate necessary information for reporting

Multiple models & end reporting systems

- × May use different models for different basis
- × May use multiple software

Manual processes

- × Process can be manually intensive, particularly the data process

Tighter reporting deadlines

- × Solvency II reporting deadlines coming back 2 weeks this year

More reporting requirements

- × Requirement to report more information as a result of Solvency II

Multiple reporting basis

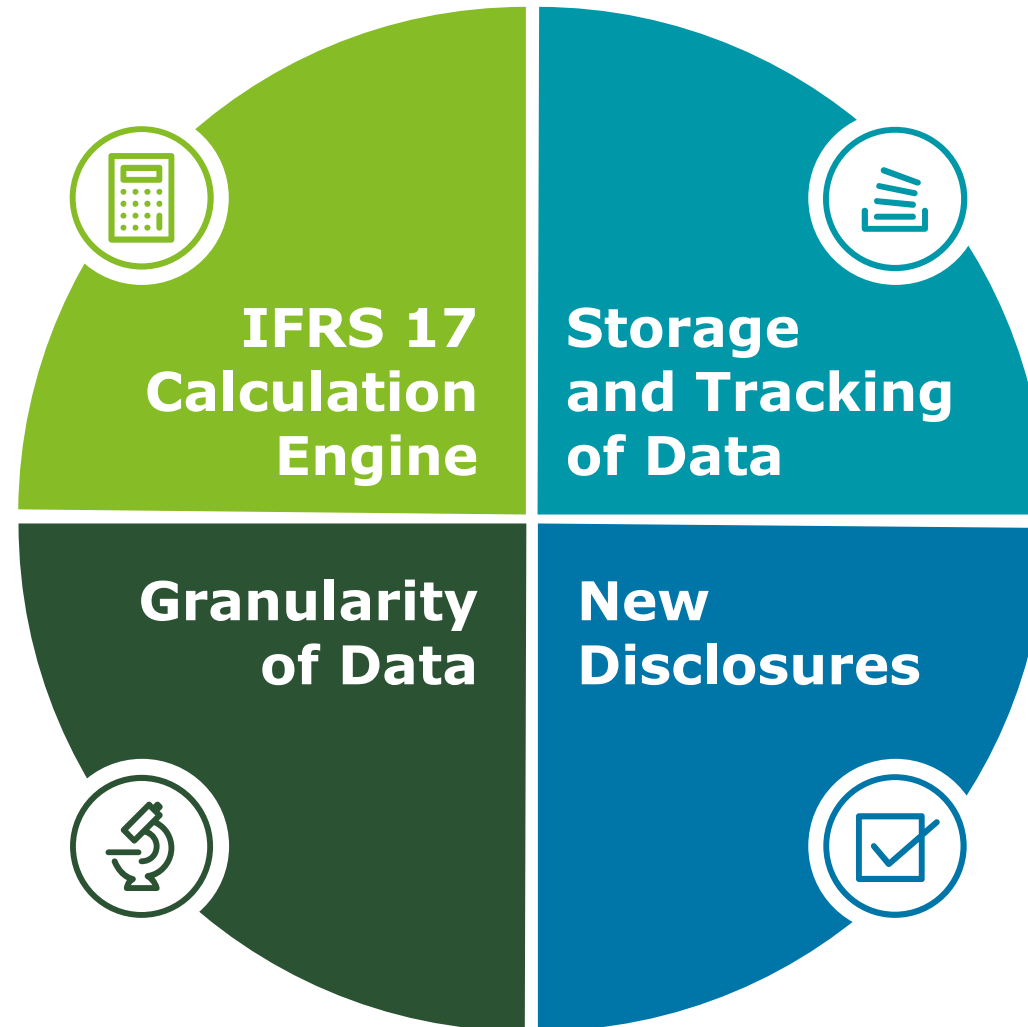

- × A requirement to calculate a number of different reporting basis – Solvency II, Statutory reporting, Group reporting, etc.
- × Different tools and processes may be used for each basis.

System
Requirements
of IFRS 17

Joanne Lonergan

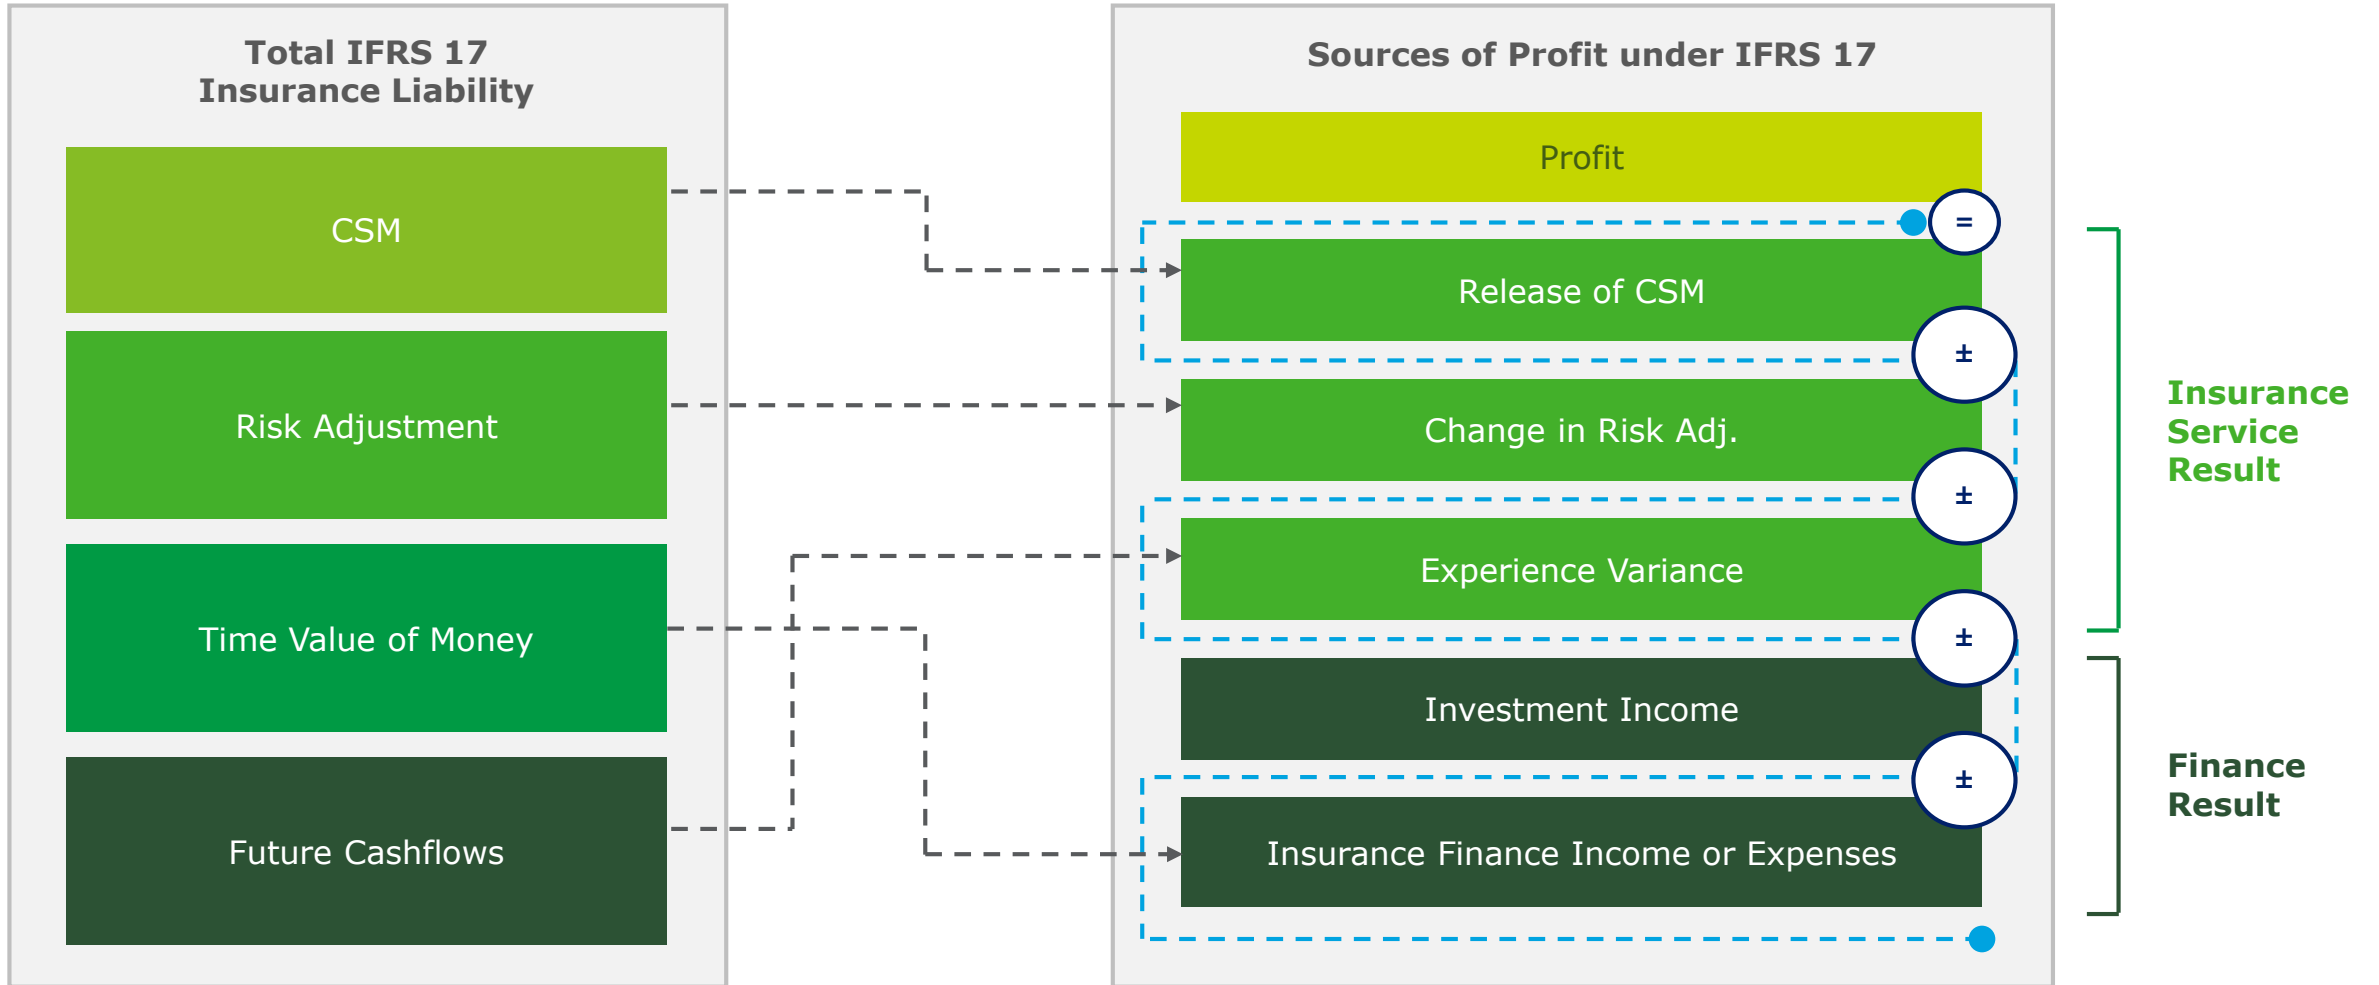

IFRS 17 Challenges for models and systems

Overview

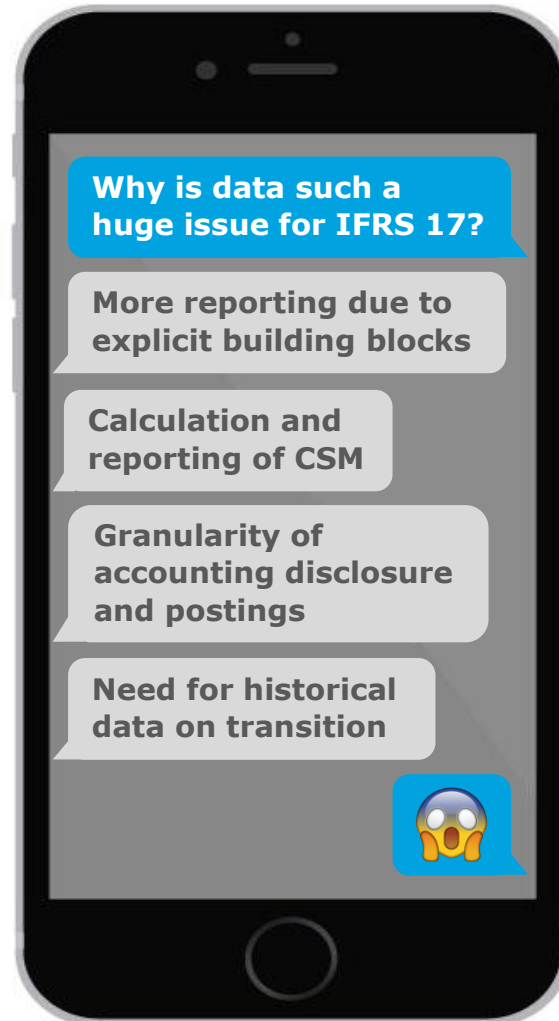

Additional IFRS17 modelling and system challenges

IFRS17 Calculation Engine

Additional IFRS17 modelling and system challenges

Storage, tracking and granularity of data

Additional IFRS17 modelling and system challenges

New disclosures

Ledgers

- Update to allow for RA & CSM on Balance sheet and amortization on P&L

Group Systems

- Consolidation now needs to allow for CSM & RA

Planning & Forecasting

- Needs to project the CSM & RA
 - New KPIs

Management Information

- New Reports/KPIs
- Allowance for CSM

IFRS 17 Challenges for models and systems
What then?

**Can your system be
easily adapted for these
changes?**

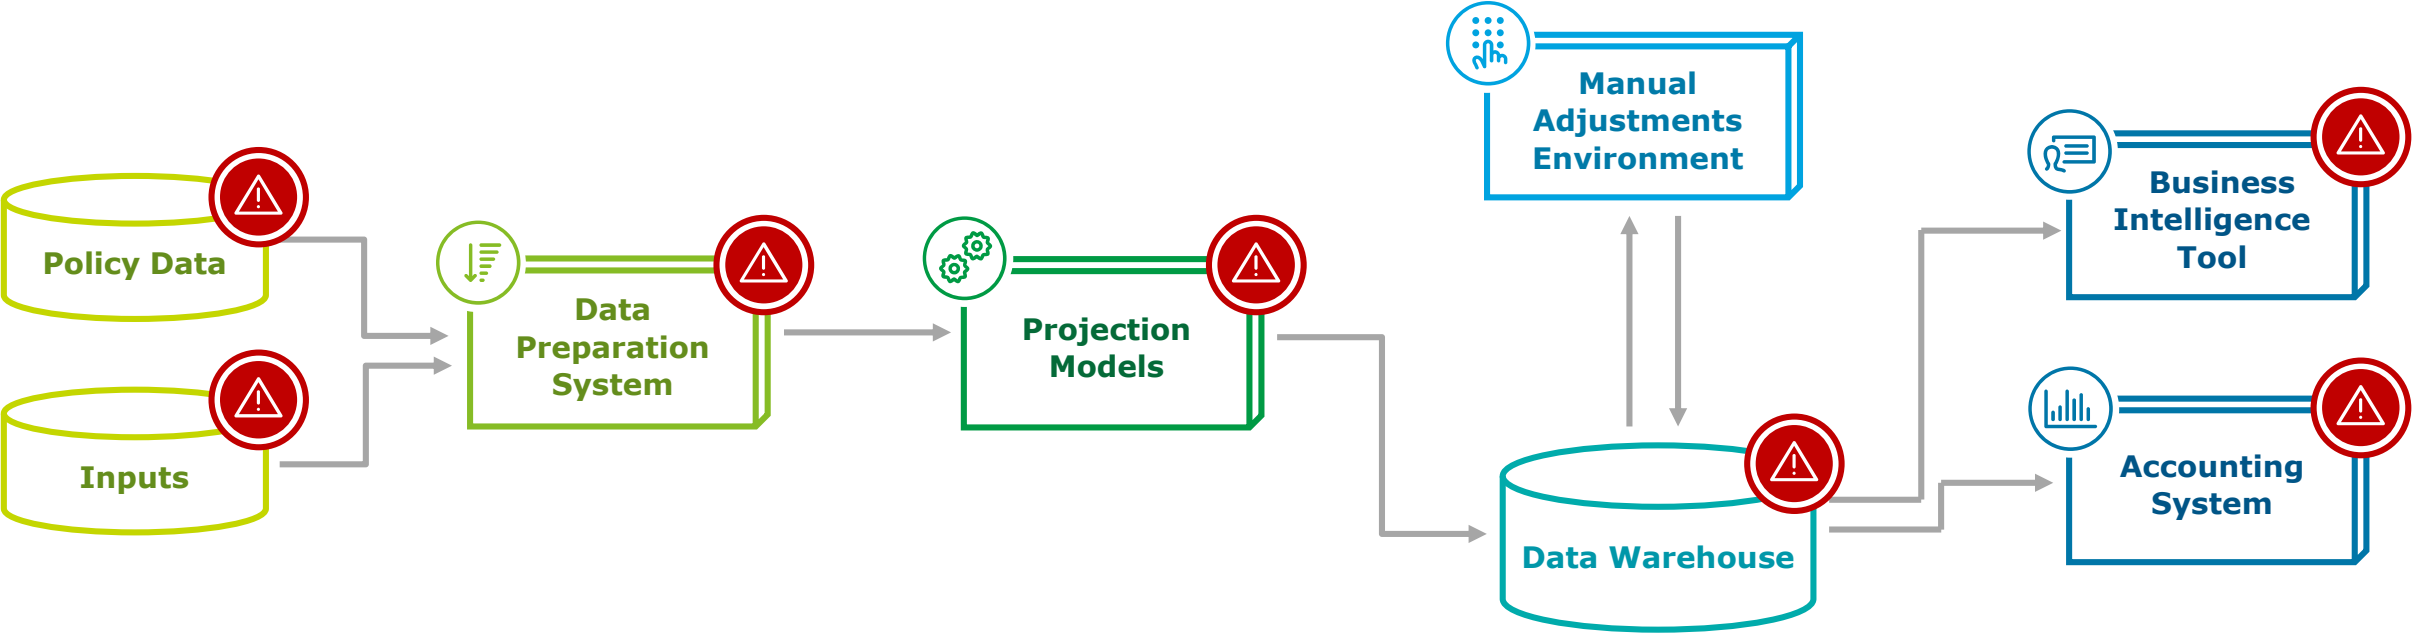

**What about the changes
needed for IFRS18 and
Solvency III?**

Reporting Systems

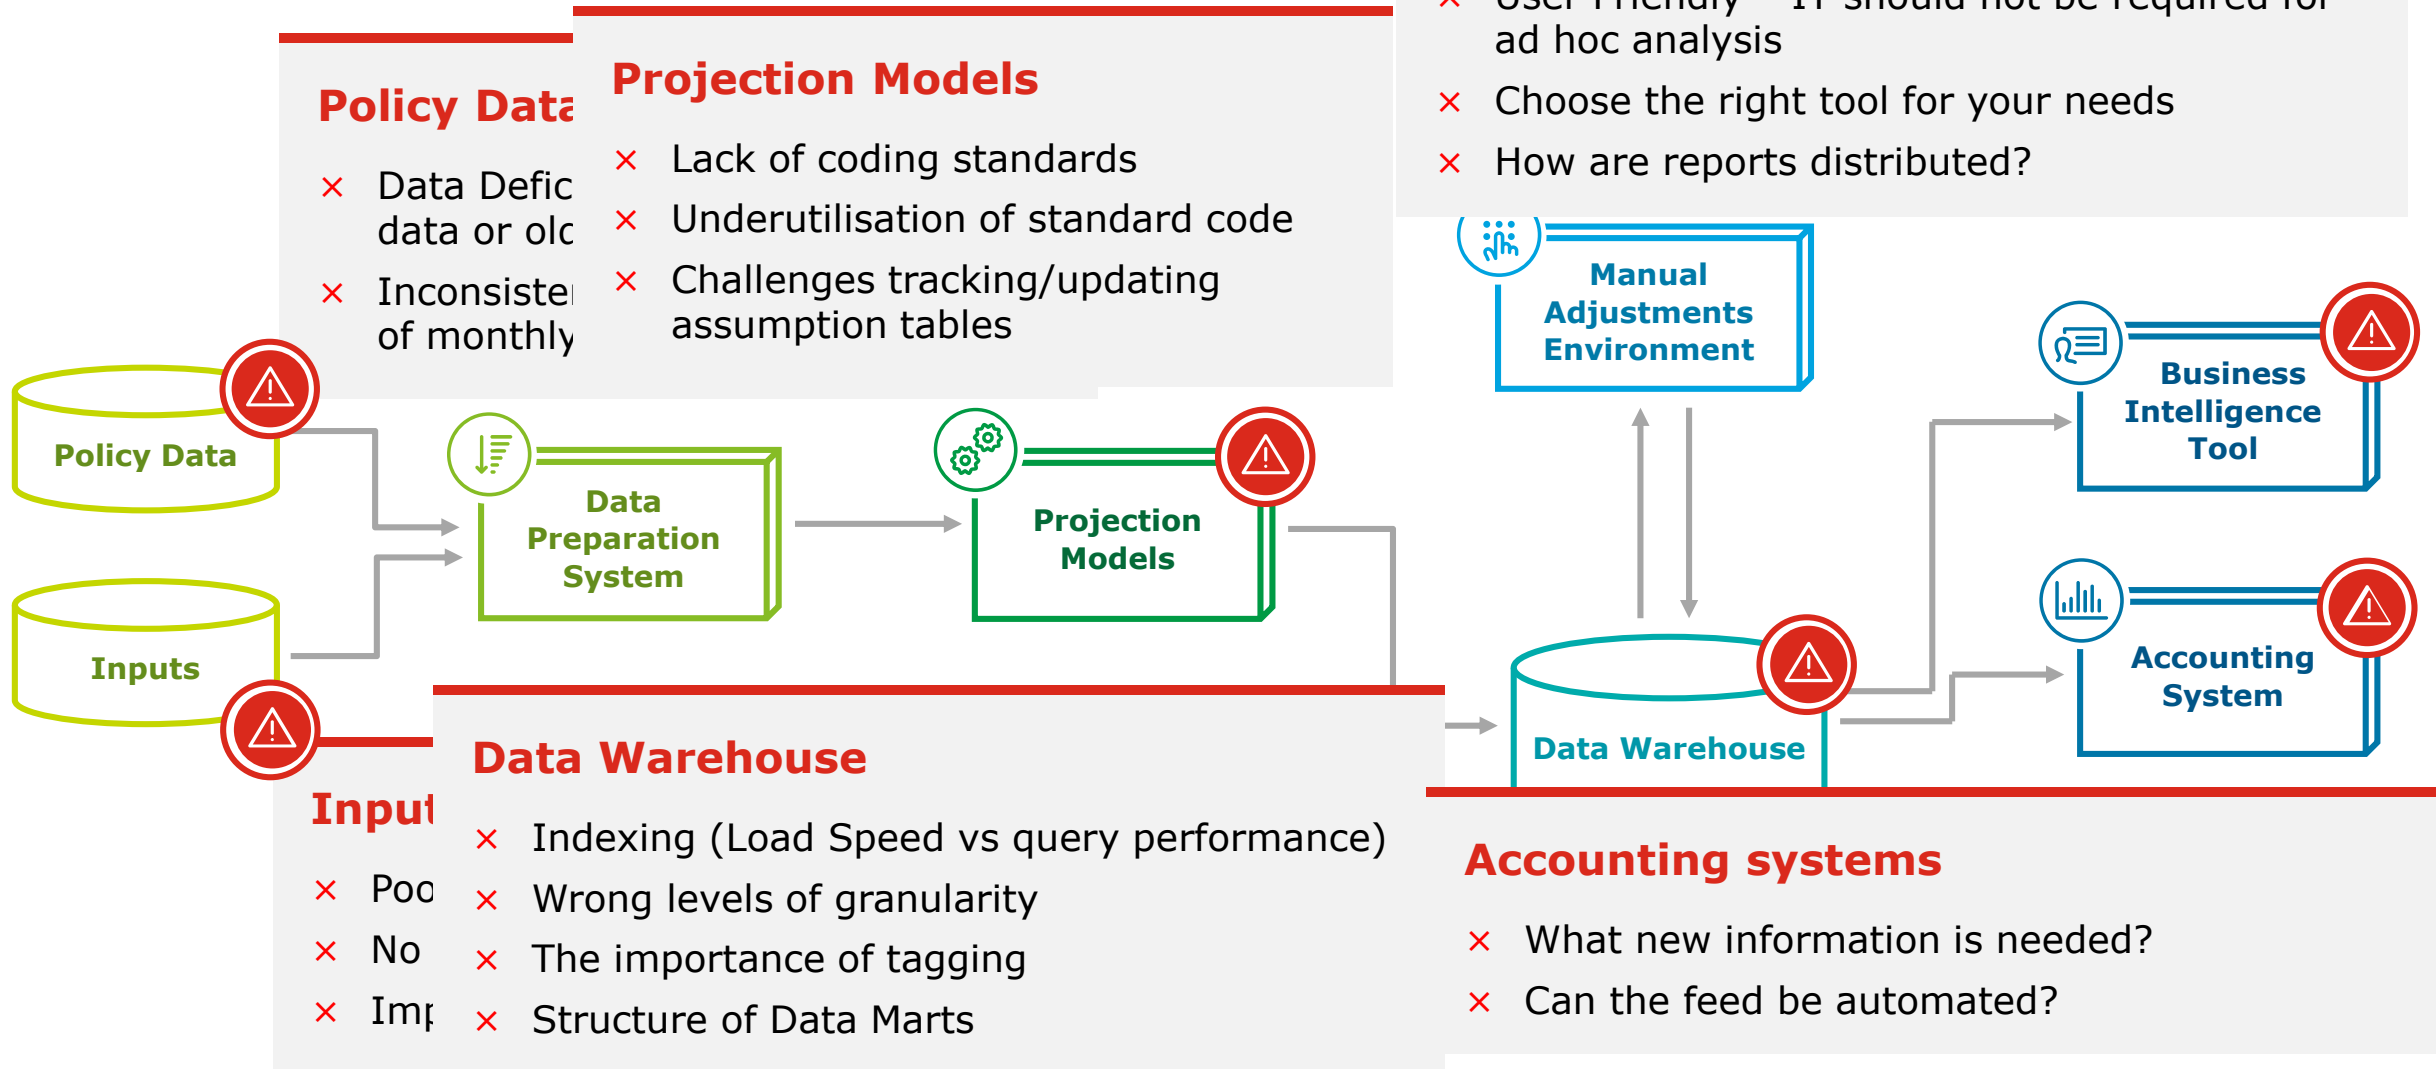

Brendan Guckian

What changes are expected due to IFRS 17?

Where will you feel the heat?

What changes are expected due to IFRS 17? Where will you feel the heat?

Key System Design Points

Things to consider

When Building a System

- ✓ Be clear on your requirements
- ✓ Ensure you have the correct level of granularity
- ✓ Ensure you have the correct data tags
- ✓ Build a framework as well as a system

When Maintaining a System

- ✓ Looks at how changes are implemented not just the financial impact
- ✓ Too many sticky plasters results in a mummy

Impacts of Poor Design

- × Unnecessary volume of:
 - Input Tables
 - Model Instances
 - Master Products
 - Lack of consistency across reporting bases
 - Model Point Files
 - Code Duplication
- × Increased volumes of outputs
- × Longer reporting cycles
- × Higher maintenance costs
- × More maintenance
- × Complexity
- × Really talking about poor requirements and design

The Ideal Solution

What should you aim for?

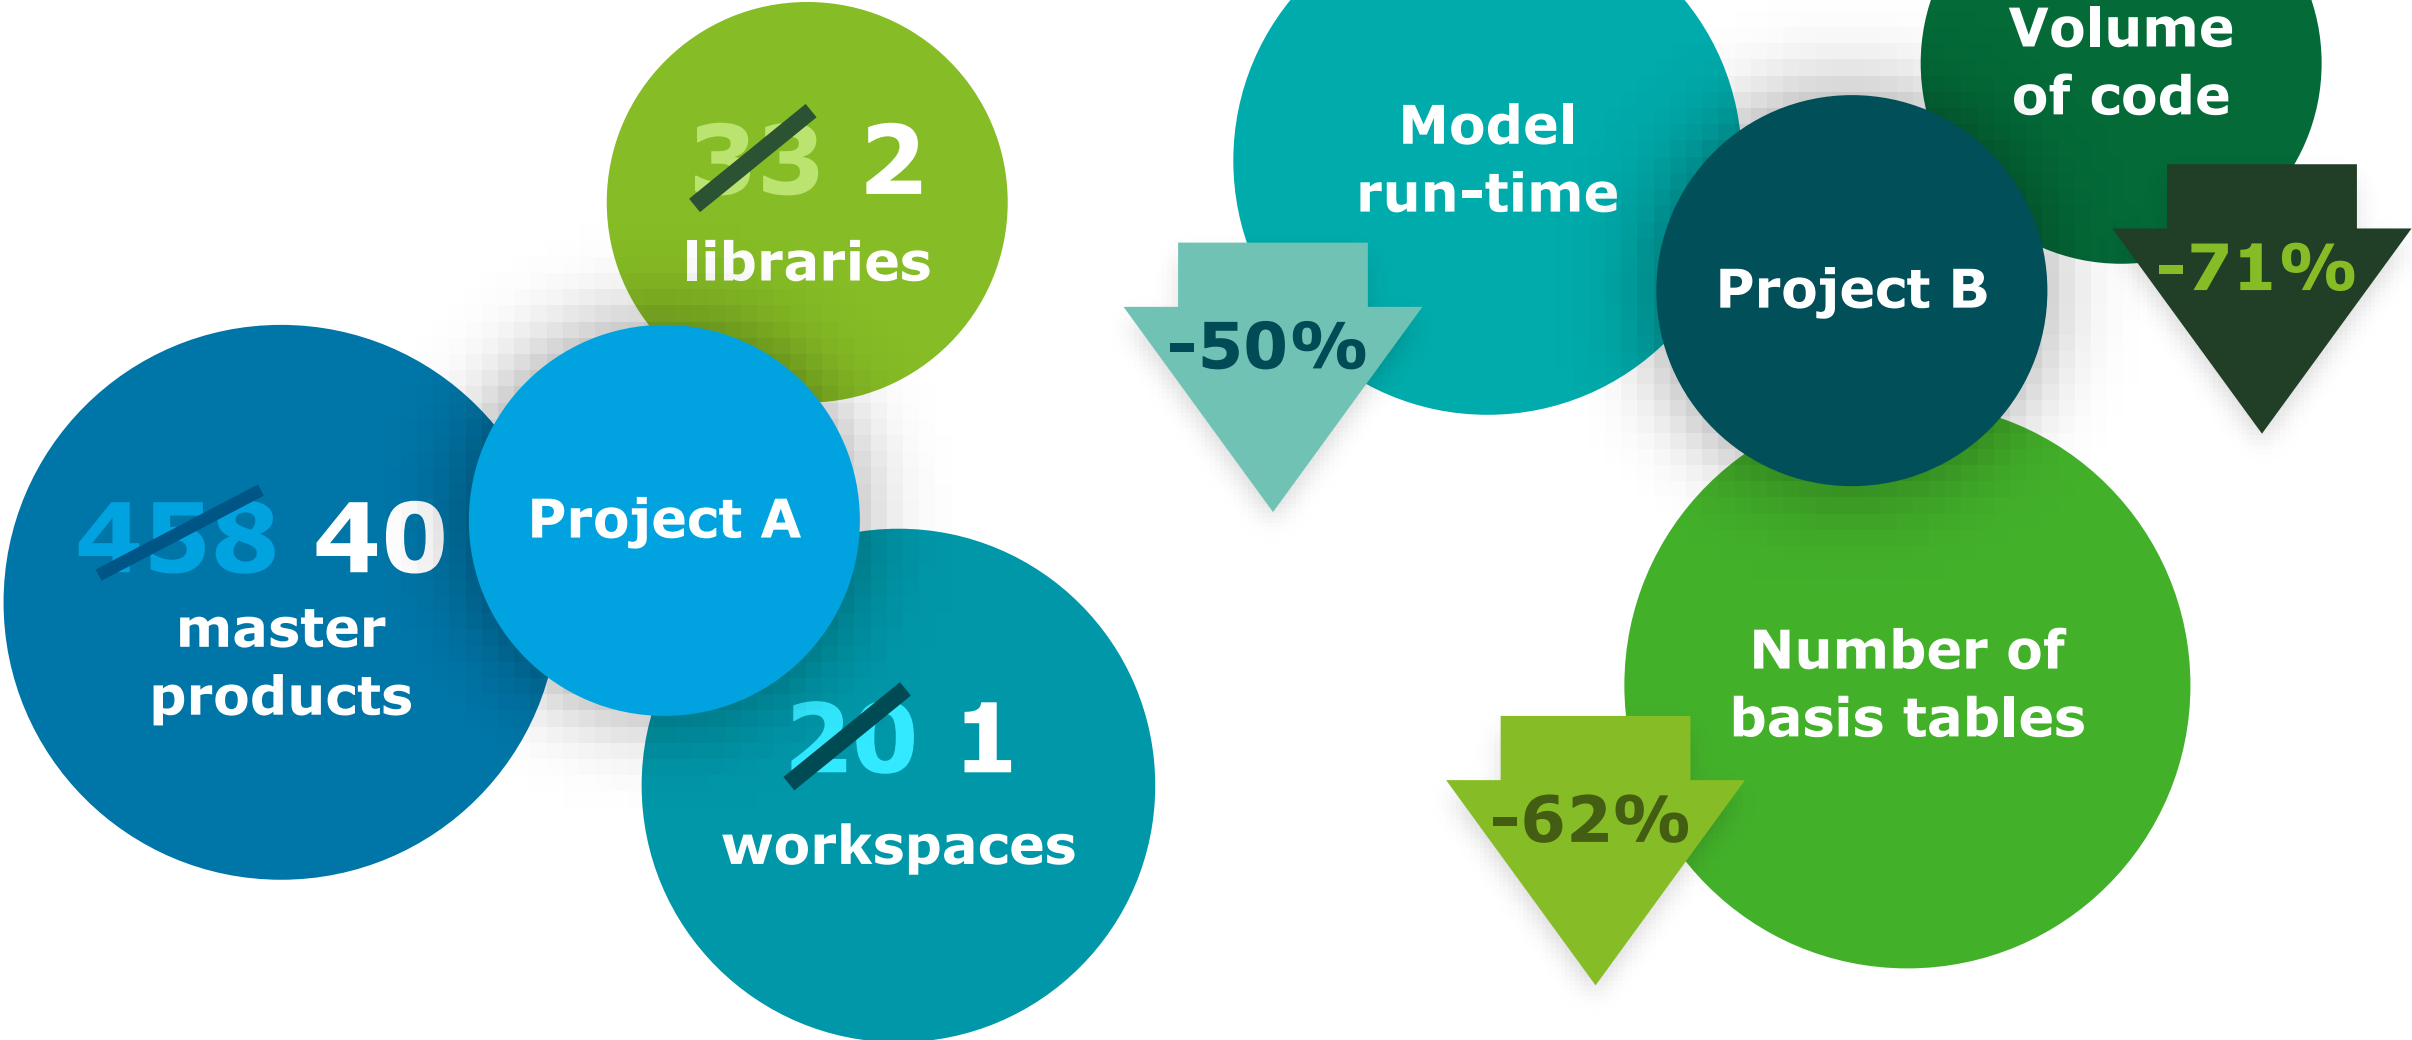

Key Principles

-  Clearly defined framework
-  Standardised data formats
-  Easy to use, ideally fully automated
-  Harnesses synergies e.g. uses Solvency II functionality/models
-  Flexible enough to allow for future changes
-  Full data lineage and audit trail
-  Meets your reporting requirements

Benefits of Good Practice

What can be achieved?

What changes are expected due to IFRS 17?

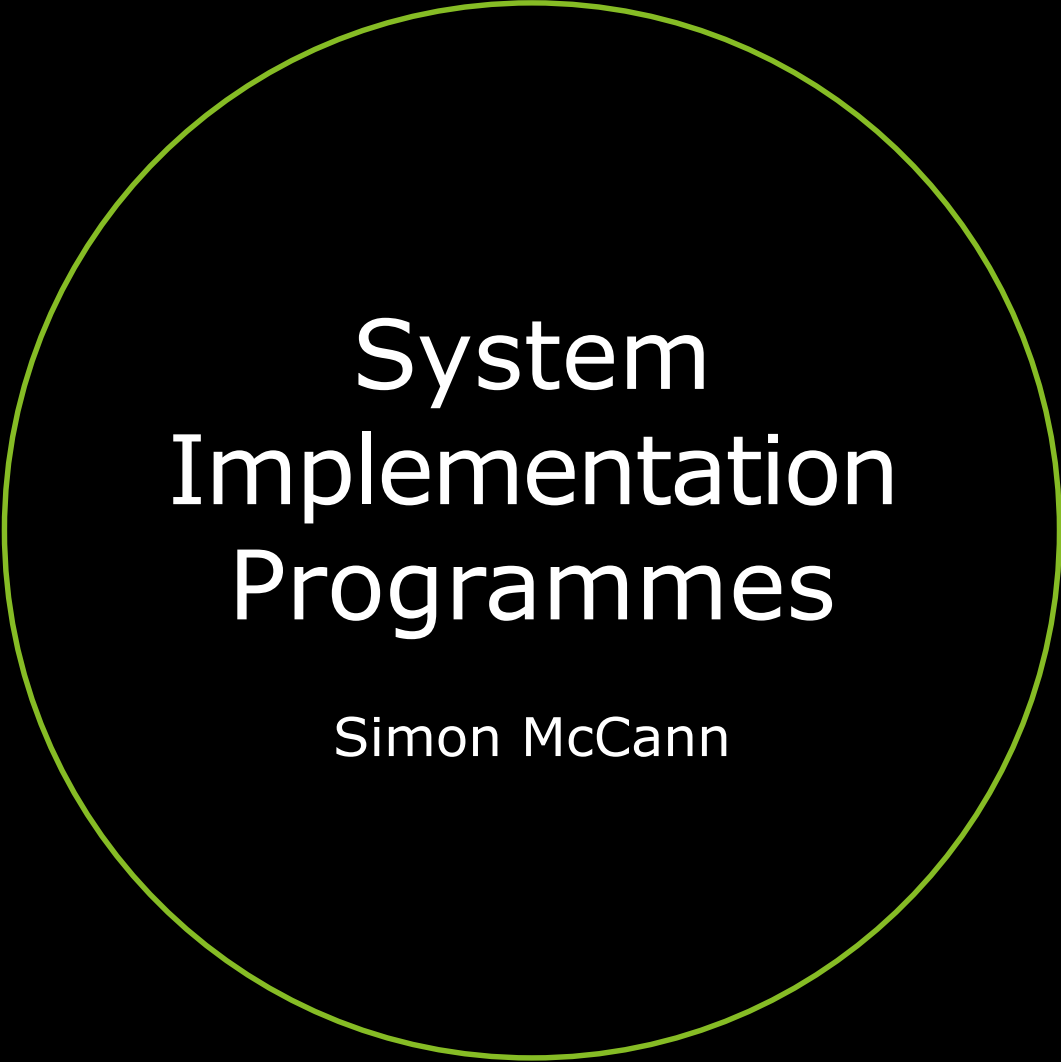

Summary

Common Issues & IFRS17 Tips

- ✓ Model Inputs
- ✓ Projection Models
- ✓ Data Warehouse
- ✓ Business Intelligence tools

Key Design Topics

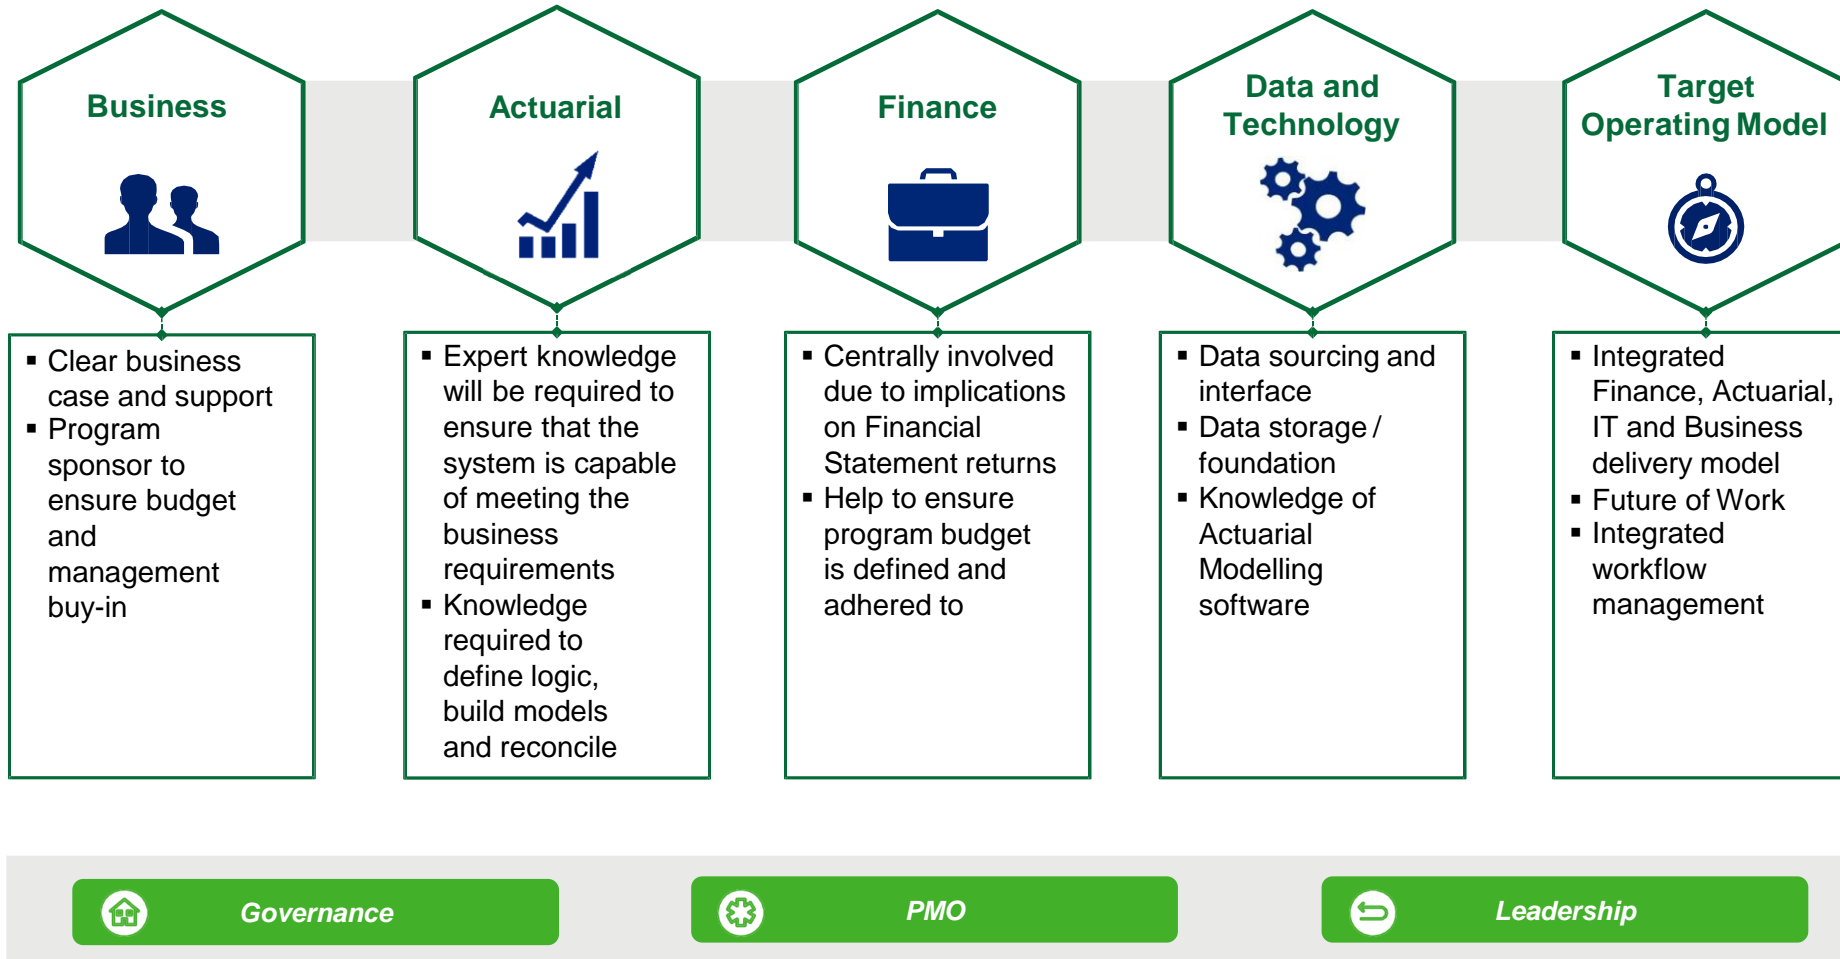

- 1) Requirements
- 2) Granularity
- 3) Tagging
- 4) Framework

System
Implementation
Programmes

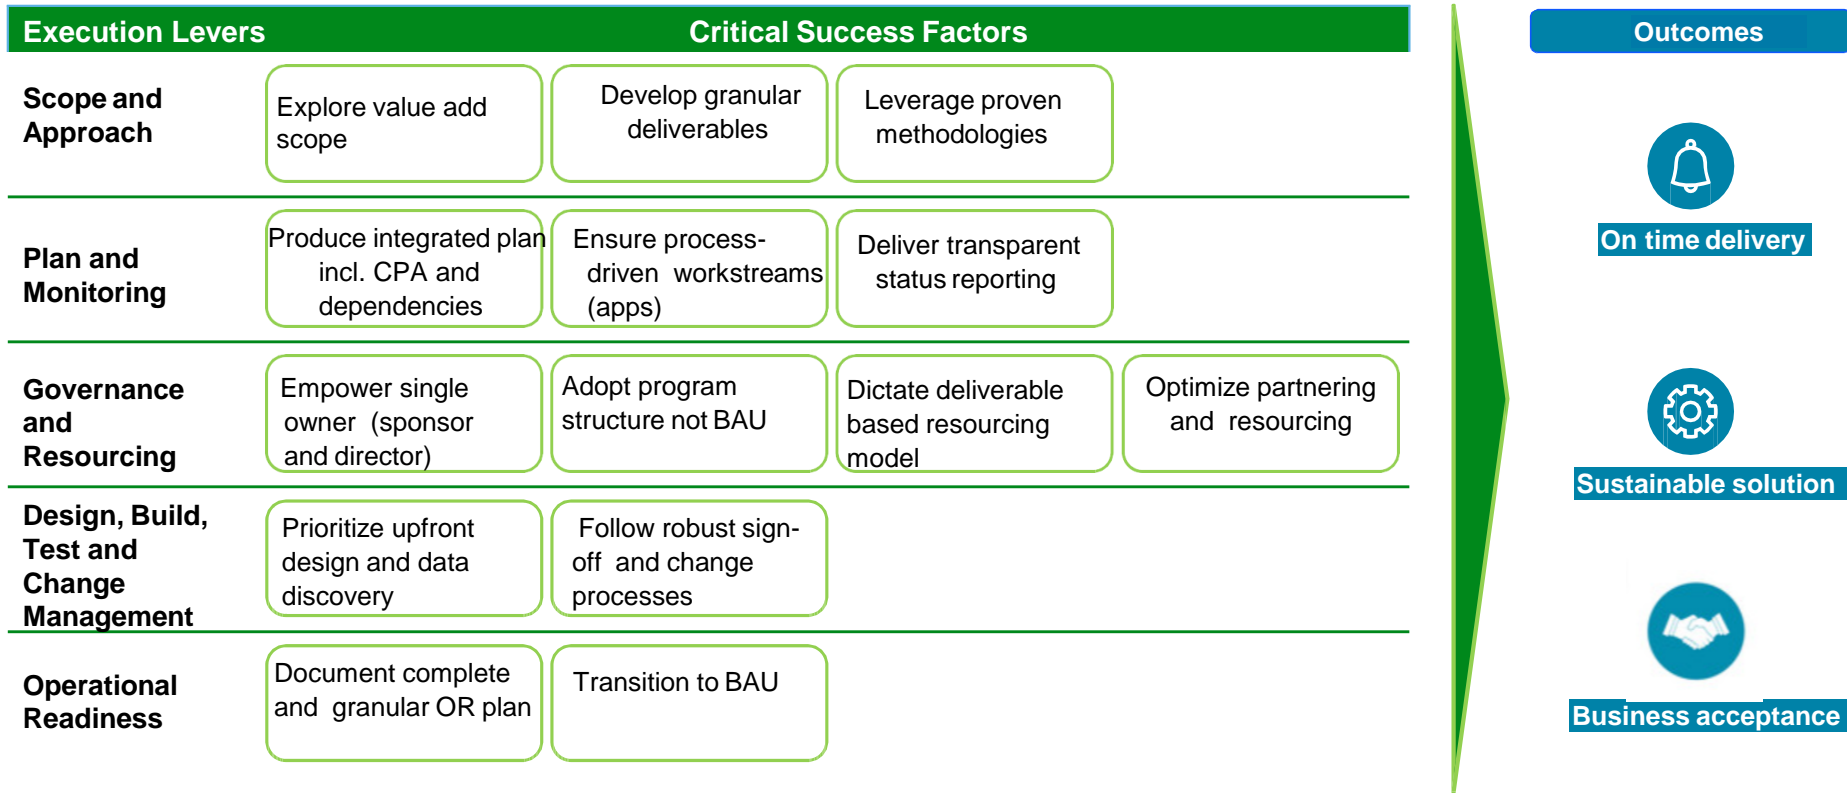

Simon McCann

Actuarial Systems Implementations

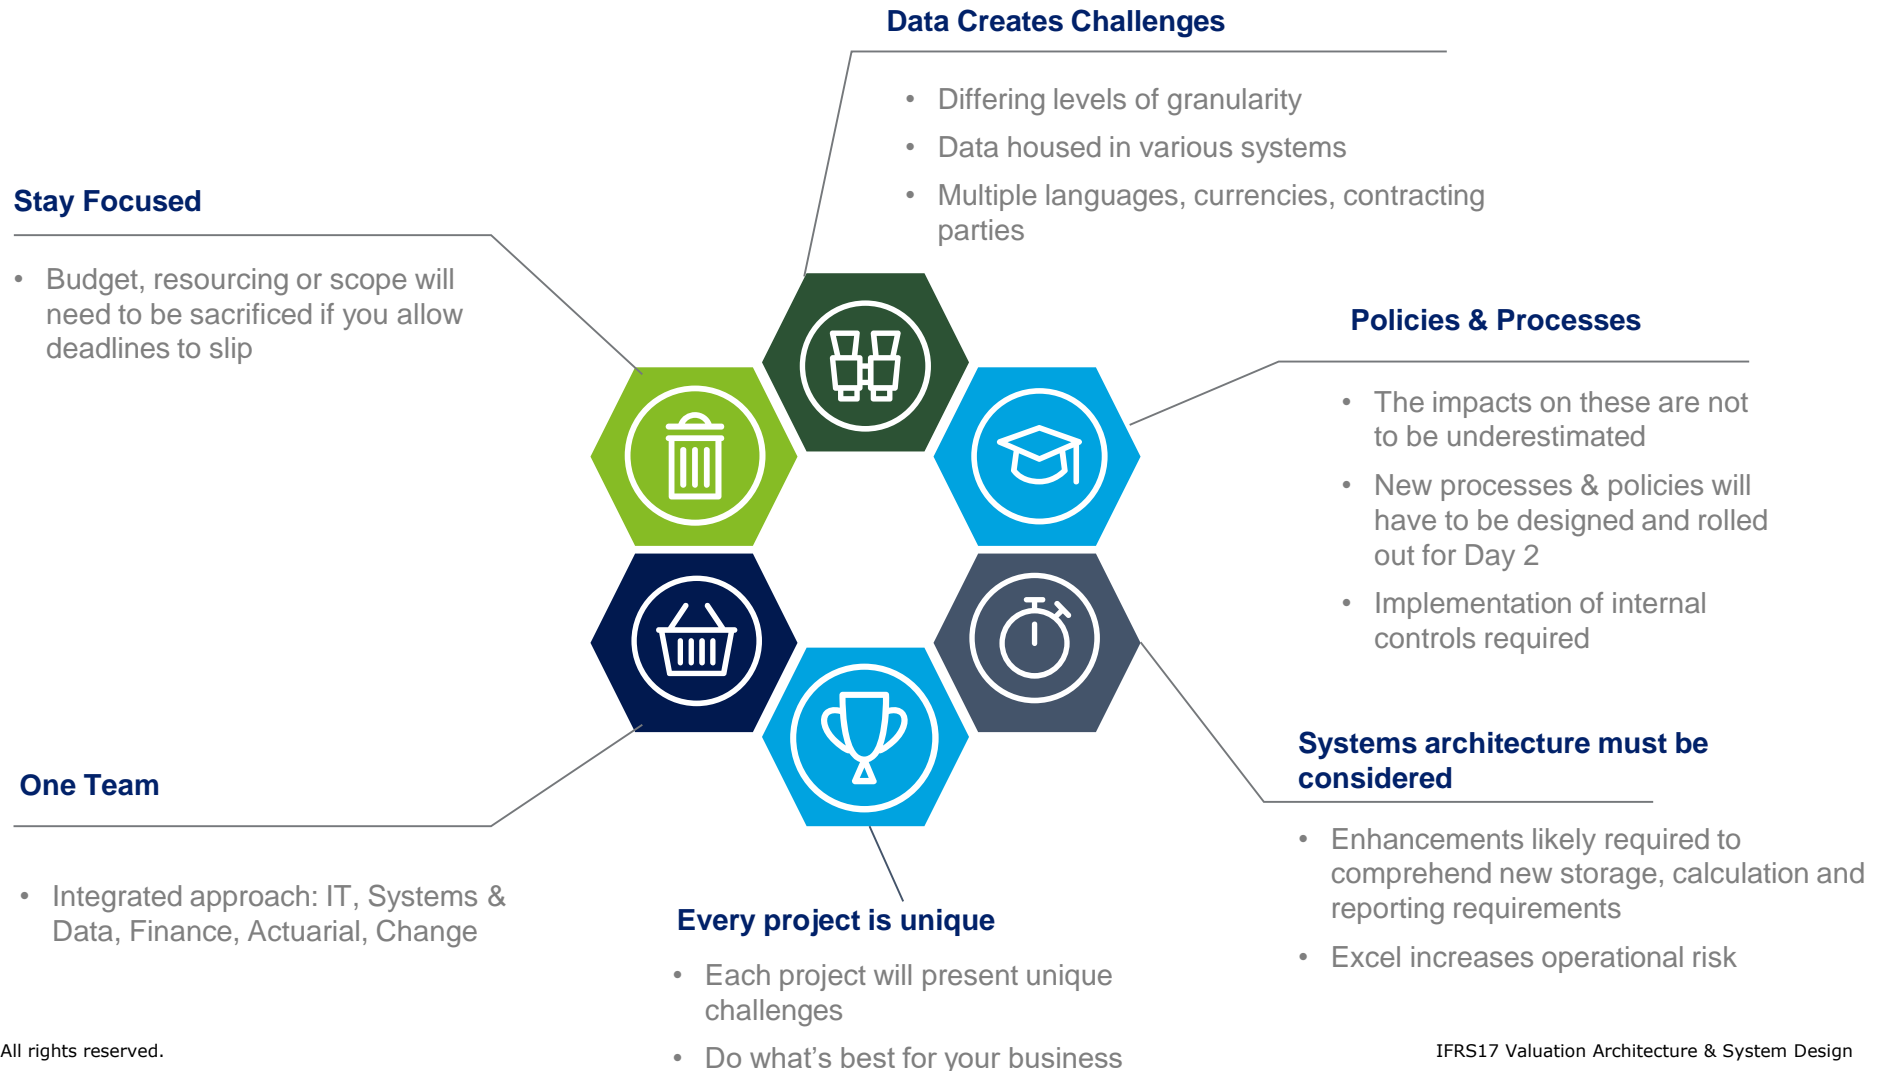

Critical Success Factors

Practical execution

Key Takeaways

Learnings from other projects, that will help the set up, planning and approach and will help to avoid common pitfalls.

**Actuarial
Modelling Centre
of Excellence**

Marc Fakkal

Introducing the Actuarial Modelling Centre AMC Ireland

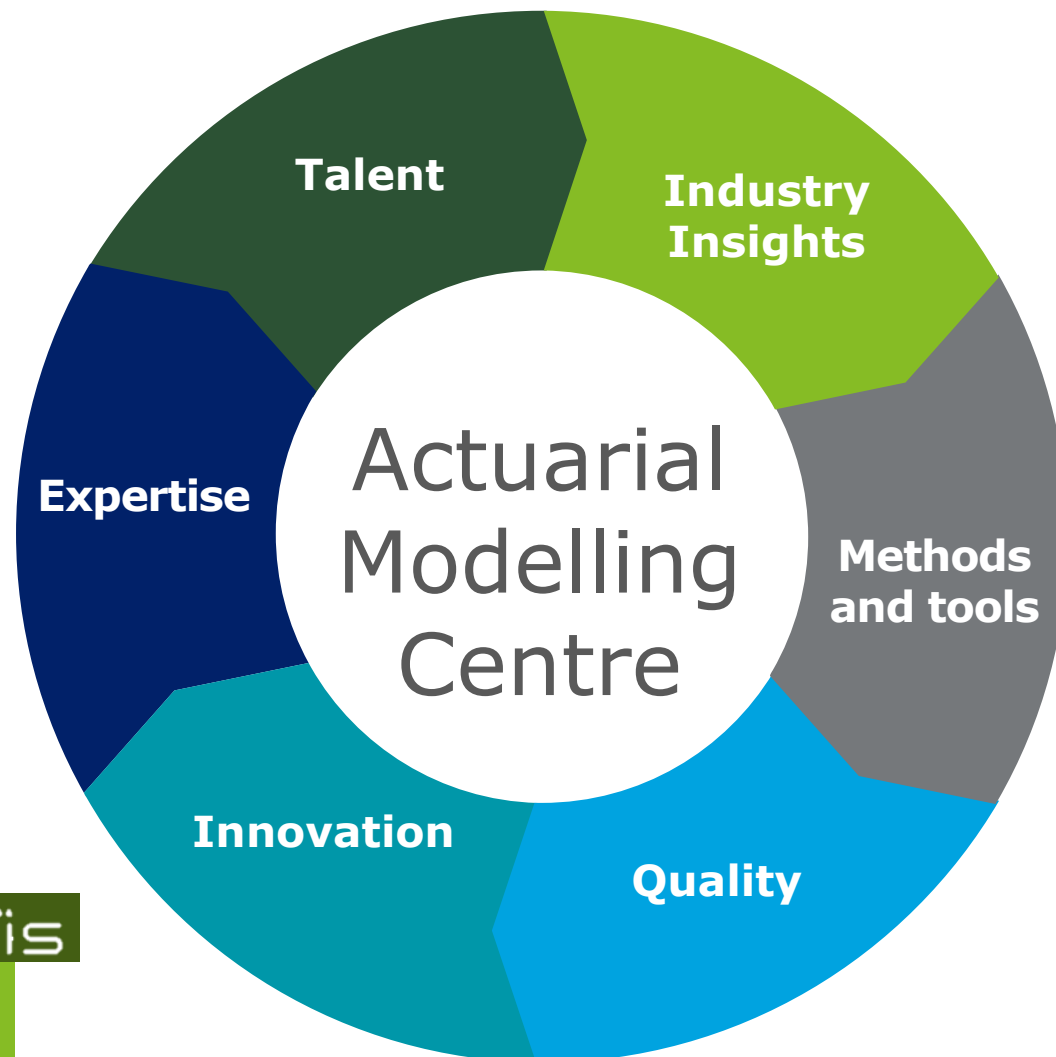

The Deloitte Actuarial Modelling Centre (AMC), part of the Actuarial, Reward and Analytics (ARA) practice, is our centre of excellence for actuarial modelling. The AMC formalises the Deloitte approach to actuarial modelling where we are recognised as a market leader.

The AMC uses our standard management and project frameworks to deliver modelling engagements. Our expertise in this area is underpinned by our market leading approaches, frameworks, tools and training to support the delivery of actuarial modelling to our clients.

Global Alliance with FIS

Deloitte have formed a global strategic alliance with FIS, the developers of Prophet, to help insurers through the operational challenges of implementing IFRS 17.

Deloitte.

Thank You
Any Questions?

Appendix

Prophet IFRS 17 Library

- It is a new Prophet library which performs group calculation
- It is model point driven where each model point represents a cohort of policies
- It is reading results from products in other Prophet libraries or external data source through tables
- The other Prophet libraries are also enhanced for the cashflow discounting and aggregation required for IFRS
