

# AgeTech Capabilities

AgeTech refers to digital, IT, and mechanical technologies aiming to prolong physical functionality and well-being of older adults and assist their caregivers. With over 170 active startups in Israel, there are various AgeTech and Digital Health solutions that can, and some already provide the ultimate response for COVID-19 among the older adult population

## Seniors' Health Engagement

Technologies that improve and enhance seniors involvement in their own health, including cognitive care, self-rehabilitation, nutrition, hygiene, etc.

## Remote Monitoring & Telehealth

Edge medtech & digital health solutions helping medical & nursing home staff to remote monitor the older adults patients and treat them virtually

## Care Coordination

Technologies aiming to increase management workflow, medication management, EMR's tracking and e-care planning

## Social, Communication & Well-Being

Technologies that focus on virtual interaction between seniors and caregivers / community

## Prevention & Separation

Technologies that remotely and physically monitor and test older adults health & hygiene
