Security Design Assessor Overview

Security design assessor | Overview

Security Design Assessor enables organisations to assess and visualise vulnerabilities in their IT security framework and design. It benchmarks the performance of an organisation's security framework against industry standards, across 80+ pre-defined KPIs with 'one click'.

Business need

- Timely identification of gaps in security design to manage risks and audit compliances
- Need to decide the approach for HANA migration – technical migration vs greenfield security design for S4 HANA
- Lack of business bandwidth to perform periodic review controls, leading to unmitigated risks and undetected issues

Tool highlights

- Flexibility to add/remove KPIs as per client's requirement
- Use of analytics and automations for faster reporting and reduced manual errors
- Interactive dashboard to support root cause analysis of issues
- Transaction usage analytics drives faster conclusion on remediation actions
- Role and user assignment KPIs to identify system usage and security design anomalies

Benefits

- Security design gap identification with greater accuracy
- ~75% reduction in the assessment effort with automated analysis
- Periodic identification of gaps and initiation of remediation actions for effective risk management
- Enables fact-based decision making to create a lean security design
- Helps in reducing license cost by identifying dormant users

Input (T0)

Extract

Download user authorisation and security compliance data from SAP system

Upload

Consume user authorisation and security compliance data within security design assessor

Report

Publish interactive dashboards and the detailed gap analysis report

Execute

Run SDA's query engine to analyse data against the KPIs

Security design assessor | Dashboards

78

Executive dashboard

Summary view to publish the overall system health across compliances, role design, user and logon management, and access assignment related KPIs

Role design diagnostics

Detailed KPI-based reporting on the health status of roles in the system, enabling clients to take informed decisions and achieve lean security models

Key highlights

- Compliance statistics Gaps observed with overall design and framework for application security needs immediate attention
- User and logon management There are 22 inactive SAP user accounts who haven't logged into the application for more than 90 days
- Access management 460 active users observed with access to sensitive tcodes; access review must be performed to validate and remove excessive access

Key highlights

- There are 18% redundant roles which must be reviewed and deleted
- Review and revoke sensitive IT access from 52 business roles and sensitive business access from 317 IT roles
- All edit access must be revoked from 32 display only roles
- Review and reduce the wide access granted to 9 Roles with transaction ranges
- Review transaction usage of users to limit access as per job responsibilities
