

Analytics for  
high-tech companies  
The three-minute guide

# Why it matters now

## New outlook, new questions

“Why do we need analytics to compete? We’ve been doing just fine without it.” That’s a fair question for many technology companies to ask about analytics. But as leaders in other industries know, any sustained period of frenzied growth typically brings a new set of challenges.

*Where will the next wave of growth come from?*

*How will we enhance the value of our current business?*

*What do current customers want, and how will we give it to them?*

*What risks are we facing that we haven’t even considered?*

*How will we sustain our success?*

*How should we allocate limited resources?*

As they move their companies from a growth orientation to a value footing, tech companies are finding that the growing mountain of data they’ve been building holds the clues to sustained innovation and sound management.

And analytics is the tool they’re using to make sense of it all.

# Why analytics for high-tech companies?

## The analytics roadmap

Say you have a growing pile of data, most of which is going unused.

Maybe you also have the internal momentum to do something with all that information—driven by a desire from the executive team to make smarter, more informed decisions. Plus, you have access to powerful new technologies that can help you make quick work of massive amounts of data.

Sounds great. But you still need a clear business goal and a plan for achieving it—for transforming data into actionable insights. Analytics offers a path—not just the technology, but a business-first approach that draws from the worlds of process, technology, and talent to generate results beyond what today's business intelligence tools can deliver.

# The benefits

## **Real dollars**

Advanced analytics isn't some academic exercise to make a smarter organization. It can be a way to generate bottom-line revenue. New revenue, cost savings, more working capital—that's what is at stake here.

## **Business innovation**

We've seen many tech companies enter new markets and compete for different customers based on the hidden insights uncovered from their data. This isn't just about making your existing business better. It could result in new businesses.

## **Better allocation of scarce resources**

From talent to investment dollars, analytics has the potential to deliver the facts executives need to make smarter decisions about resources.

# What to do now

## **Identify the desired outcome**

There should be real dollar benefits from your analytics initiative. Otherwise, why take on this challenge? Know what level of benefits you need from the start.

## **Start at the top**

Without the support of someone in the organization who has the authority to implement change, new analytics initiatives are usually dead on arrival. The effort must be owned by an executive with some clout.

## **Be ready to act differently**

Adopting an analytics approach? Get ready to uncover new information—and to do things your organization has never done before as a result. You will learn new things—and you'll be responsible for acting on them.

## **Prepare for the talent war**

These days, it seems like nearly every industry is on the hunt for talent. And there's not enough to go around.

# Time's up

## Gear up

If you're ready to get beyond the theory of analytics and start putting it to practice in your organization today, we can help. Your bottom line could show the benefits sooner than you think.

Here's where to get started.
