

Meta-data

The meta-data set provides data and definitions of the columns used in other tables and data sets.

Column	Dataset	Definition	...
Last name	Client data	Last name of client	...
Street	Client data	Name of street of client	...
Code	Reference data	2 digit country code	...
...

Master data

The master data set contains detailed information about for instance the clients of the financial institution. Definitions of the data attributes are stored in the meta-data set (e.g. last name and street).

ID	Last name	First name	Street	Country	...
A0001	Jonathan	Dylan	5th Avenue	UK	...
HLZ23	McAllister	John	Regent Street 6	US	...
YHS78	Janssen	Henk	Lenteplantsoen 7	NL	...
XTR99	Dunning	Jan	Vondelstraat 118	NL	...
...

Reference data

The reference data set consist of reference data used to populate columns in the master data set and to transform data to other values (e.g. country).

Code	Full name	3 digit code	...
UK	United Kingdom	UKD	...
NL	Netherlands	NLD	...
US	United States of America	USA	...
...
