

## TrackonTrade Delivering Customs Compliance

---

Companies operating in international markets are faced with a multitude of complex rules and regulations that must be complied with in order to trade successfully. Goods crossing the European Union border, including goods stored and processed under customs consent are subject to a broad range of controls imposed on them by numerous authorities.

Are you burdened with trying to optimize your customs processes to minimize cash flows whilst ensuring you meet the necessary trade compliance levels? Do you wish you had more time to focus on your core business?

### **Operating in an international trade environment**

Multinationals are operating in an environment of unprecedented complexity. Customs and trade legislations, by no exception, have a significant impact on the cross border movement of goods. Companies are compelled to balance the needs of remaining

compliance with international trade regulations and moving goods quickly and cost effectively.

Deloitte's customs compliance solution, TrackonTrade, helps you to operate in this complex customs and trade environment by automating various import, export, storage, processing and transportation procedures, documents and data. TrackonTrade integrates seamlessly with your existing operational processes and ERP environment, to cover key aspects of customs and trade compliance and communication requirements. TrackonTrade saves you time by processing ERP information and data required for preparing and submitting key trade documents and reporting to the customs authorities.

Deloitte Customs and Global Trade professionals proactively update the content and software following legislative changes in customs rules and regulations. Since TrackonTrade is a one face European customs compliance solution, you no longer need to have an in-depth knowledge of all European Union countries customs rules and legislation.

### Automation means customs process optimization

Effective implementation of automation solutions significantly improves operating efficiencies and cash flow whilst also ensuring that you remain compliant with international trade regulations. TrackonTrade translates logistic flows to appropriate customs flows, enabling you to focus on your core business.

TrackonTrade ensures that changes in standard customs reports, customs declaration formats and content including electronic communication requirements are up to date.

You can relax knowing that you are compliant with the latest customs rules and legislation as these have been captured in decision models within TrackonTrade.

### Automation means time savings

Companies spend valuable time searching for the latest commodity codes, duty rates, exchange rates, and other relevant customs data and information required for customs declarations. TrackonTrade contains the relevant customs content and updates the content automatically on a daily basis.

### What makes TrackonTrade unique?

TrackonTrade provides both software and customs knowledge, where other market solutions offer either data or 'empty' software packages. TrackonTrade is ideal for businesses looking for a customs compliance and international trade knowledge solution that can be incorporated into existing operational programs.

TrackonTrade allows you to select various modules such as declarations, storage authorizations management, production authorizations management, origin determination etc.

The TrackonTrade database contains all historic customs information and is suitable for several data analytics tools adaptable to TrackonTrade. The output of these tools will help you to further optimize your customs and business processes and provide customs audit trails.

### Our approach

Deloitte's Customs and Global Trade and IT experts work together with your business practitioners to analyse existing customs and trade processes and to design an optimal customs structure. Based on the approved business case, automated decision tools are then specified, data and transaction mapping is

outlined and the commercial to customs triggers are identified. The TrackonTrade solution is then customized for integration into the ERP-system and installed effortlessly. End user training takes place once the system has been tested and is ready to be used. Deloitte continues to support and maintain the software and content to ensure that you are compliant and continue to benefit from your optimized customs process.

### Specific industry solutions

TrackonTrade is a proven solution in specific industries:

- Apparel and footwear
- Fruit and vegetables
- Manufacturing
- Oil and gas

### Why Deloitte?

Deloitte provides not just a piece of software, but provides businesses with a complete service offering, from customs advice, software implementation to content maintenance.

TrackonTrade is delivered by Deloitte's European Customs and Global Trade group consisting of specialized customs tax lawyers and software application and database specialists.
