Brains at the edge: machine learning goes mobile

Deloitte Global predicts that in 2017 over 300 million smartphones (more than a fifth of units sold) will have on-board neural network machine-learning capabilities.

This will allow smartphones to perform machine-learning tasks even when not connected to a network.

This functionality will enhance applications including:

- indoor navigation
- augmented reality
- language translation
- image classification
- speech recognition
- and many more currently unknown applications
