Foreword

As part of our broader commitment to supporting business leaders across the globe in their strategic decision-making, we are pleased to present the thirteenth edition of the Deloitte European CFO Survey.

Since 2015 the survey has given voice twice a year to about 1,500 Chief Financial Officers from across Europe. The report provides an overview of CFOs' hiring and investment intentions, their views on critical business risks and strategic priorities, and the factors they currently consider vital for success. Due to its wide geographical reach, the consistently high number of participants across a range of different industries, and the privileged viewpoint of CFOs, it provides insights into how European companies view the economic environment and how they are reacting to it.

Although the COVID-19 pandemic has yet to be overcome and European countries remain under lockdown, this edition of the survey uncovers a new sense of optimism. Many companies seem already to have turned the page on COVID and are now focusing on the post-pandemic reality. This is not true, however, for all companies. Much of the ability of businesses to emerge from the crisis in a stronger position depends on their capacity to invest wisely – in people as well as in technology. The willingness to invest is indeed on the rise. But perhaps most vital of all is the ability to look further down the line and formulate a bold longer-term strategic vision. In this regard CFOs have an important role to play, providing the information and tools that can enable companies to take sound decisions.

We hope you find the views set out in the report bring an interesting dynamic to your discussions and trigger further debate. To discuss any specific aspects of the report, please contact one of our Deloitte leaders.

Foreword (Portugal)

We are proud to present the latest edition of the European CFO Survey with Portugal insights, including the biggest Portuguese companies' CFOs' perspective about economic, financial and strategic issues.

Although the pandemic crisis as not yet passed, we are now at a stage where we should start planning for the future and the return to normality. In line with the general European sentiment, results show that the CFOs in Portugal are significantly more optimistic about their companies' financial prospects than they were on the last CFO survey edition (October 2020). There is a clear turnaround on perspectives about revenue, margins, investment and employment, all with net positive sentiments now after two consecutive negative perspectives on the last two pandemic period surveys.

Portuguese CFOs identify economic outlook and reduction in demand as the two major factors that still pose significant risk to their businesses and, in spite of the global optimistic financial outlook, they still believe that this is not a good time to be taking greater risk to their balance sheet.

Digitalization and cost reduction are considered the most likely strategies to implement in their businesses over the next 12 months, as 25 per cent of the respondents believe that are already at or above pre-crisis level and 24 per cent expects return to a pre-crisis level generation revenue on the 1st half of 2022.

This is a time to shape the future, rethink strategies and market approaches. A time to invest, seizing the opportunities that European funds for recovery and thrive present. A time to transform your business and grow. The results of this CFO survey attest to this: More than a half of the Portuguese CFO's are preparing for and shaping the post pandemic future.

We hope that this edition presents relevant and insightful information for you and for your business. We take this opportunity to thank all Portuguese CFOs that took a moment of their time to participate and share their insights with us.

52%

of inquired CFOs feel more optimistic about their company's financial prospects than three months ago

In Portugal, as in Europe, sentiment has largely improved. With only 13% of CFOs less optimistic than three months ago, Portugal now stands at 2017/18 optimism levels and above Europe's average.

The positive sentiment is also present at employment and capital expenditure expectations, that were at an all-time low last autumn.

33%

of CFOs in Portugal now expect to increase the number of employees in their companies for the next 12 months while 50 per cent expect the number to remain the same. Capital expenditure is expected to increase for 38 per cent of respondents, while 44 per cent believe there will be no changes.

70%

of Portuguese CFOs feel that the overall level of external financial and economic uncertainty facing their business remains high (55%) or very high (15%)

Conclusion

CFO survey 2021 Spring edition shows an

improvement in business sentiment across Europe, with more than a half of the CFOs in Portugal preparing for and shaping the post-pandemic future.

Looking ahead uncertainty remains high, and although business sentiment compared to 3 months ago has also improved, the majority expects an increase in revenues, no changes in employment and CAPEX.

To thrive companies will focus on digitalization, but CFOs in Portugal also highlight the importance of cost reduction. Increase in capital expenditure (CAPEX) and expanding business by acquisition has been postponed.

Only **25%** consider their companies to be already at or above pre-COVID level

(compared to 40% average in Europe), while 50% expect to return to pre-crisis level after the second half of 2021 (compared to 35% average in Europe).

86%

of Portuguese CFOs set digitalization as the top priority, hitting an all-time high, followed by cost reduction

Growth strategies, growth in existing markets and introducing new products and services have a higher priority than entering new markets or expanding by acquisition.

With strict lockdown measures still in place across Europe, vaccines being distributed slowly in many countries, and still high levels of new COVID-19 infections, it would be easy to be gloomy about European economic prospects. But financial executives across the continent take a quite different view, as the results of the latest Deloitte European CFO survey reveal.

Optimism – though much COVID harm remains

Europe in March 2021 might not seem to have advanced much a year since COVID-19 was declared a global pandemic. Stringent policy measures to restrict people’s behaviour are largely still in place across the region.

The Oxford stringency index, a composite measure that records the strictness of lockdown policies adopted, was only slightly below its level in April 2020 when Europe faced the first wave of the pandemic (Figure 1, left axis). The stringency index shows that Portugal is above the European average, nonetheless below the level that it was in April 2020. According to Google’s mobility data, visits to retail and recreational locations (such as restaurants, shopping centres or cinemas) and movements in transport hubs (such as underground, bus or train stations) were more than 40 per cent and 35 per cent below the pre-COVID level in Europe, respectively. Portugal is even less active than its European peers in comparison to pre-COVID level, with less than 60 per cent regarding visits to retail and recreation and less than 50 per cent regarding movements in transport hubs. To some extent, Portuguese and Europeans are much less active than they were in March 2020 (Figure 1, right axis). Although mass vaccination campaigns have begun everywhere, the pace of vaccine rollouts varies considerably, with most European countries far behind the United Kingdom in terms of coverage.

Figure 1. One year after the COVID-19 pandemic struck, Europe is yet to unlock.

Source: Deloitte’s calculations. Stringency Index: <https://ourworldindata.org/grapher/covid-stringency-index> , data downloaded on April 7th, 2021. Mobility data: <https://www.google.com/covid19/mobility/?hl=en> , data downloaded on April 8th 2021. Average values of mobility data for visits to “retail/recreational activities” and “movements in transit stations” across all countries part of the European Economic Area (EEA) plus Russia, Switzerland and the UK.

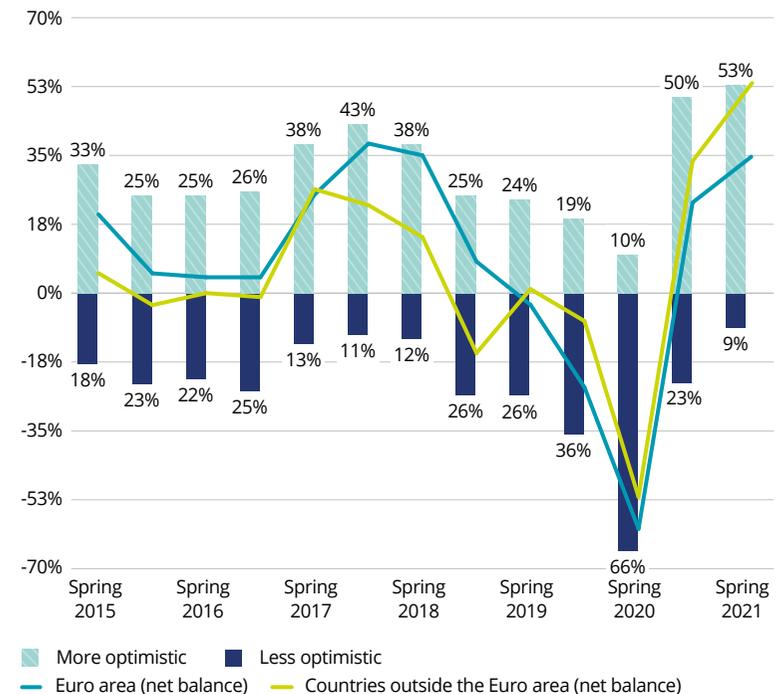

Fresh hopes

And yet the latest Deloitte European CFO survey reveals great levels of optimism across the region. In all the countries surveyed CFOs who feel more optimistic about their company's financial prospects outnumber those who are less optimistic, so that the net balance of sentiment is positive everywhere.

The overall share of respondents saying they feel less optimistic has more than halved compared to the autumn edition, to an all-time low. In Portugal the scenario is similar with 52 per cent of respondents feeling more optimistic about their company's financial prospects and only 13 per cent feeling less optimistic (half of the latest CFO survey edition). At the same time, the share of respondents who feel optimistic further increased so that the net balance of sentiment is at its highest since the beginning of the series. The increase in optimism is more pronounced in countries outside the euro area and is led above all by the upbeat mood of CFOs in the UK, where a net 77 per cent of respondents feel more optimistic than three months ago – the highest level across all countries.

The improvement in business confidence is evident too when looking at the results across different industries. Even in sectors hit hard by the pandemic, such as tourism and travel, and still much affected by the restrictions in place, a vast majority of CFOs feel more optimistic than three months ago and view the future confidently.

Figure 2. Business confidence is at its highest since the beginning of the series. Compared to three months ago, how do you feel about the financial prospects for your company?*

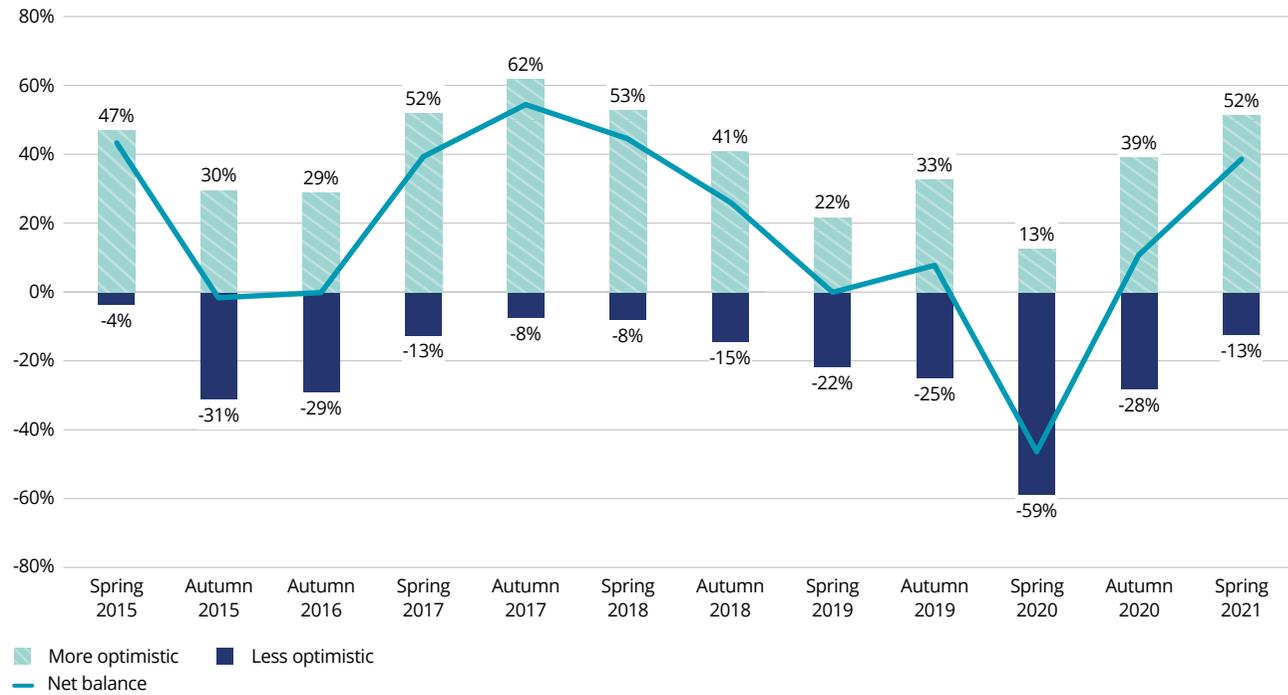

Source: Deloitte European CFO Survey, Spring 2015 – Spring 2021.
 Note: In Denmark, Norway, Italy and Poland the question specified a six-month period.
 *To explore the results country by country, please view the interactive graphs at www.deloitte.com/europeancfosurvey

Europe's CFOs also have high hopes when looking at the next 12 months. 77 per cent of CFOs expect the revenues of their companies to increase – 25 percentage points more than in September. Only 11 per cent expect them to fall. While in Portugal 67 per cent expect revenues to increase – more 27 percentage points than in September - and 15 per cent expect them to fall – less 32 percentage points than in September. Again, the improvement in sentiment is common to all countries and all sectors surveyed. Similarly, expectations on the evolution of operating margins have improved, reaching their highest since 2015.

This steep rebound in sentiment might, however, be considered almost a natural reaction. The dive suffered as the global pandemic hit was extremely deep. And despite proceeding at a slower pace than in other advanced economies, the vaccination campaign is advancing and indeed accelerating in all European countries, bringing closer the prospect that restrictions will be lifted in coming months. Particularly in those industries operating at rock-bottom levels even cautious reopening represents an improvement. It is also the case that companies have adapted to the new environment and found new ways to do business, thus becoming less hampered by restrictive measures.

Figure 3. Business confidence is at its highest since the beginning of the series in Portugal.

Turning the COVID page

There are broader signs that many European companies have turned the page on the pandemic and are fully focusing on the emerging business environment.

Asked to assess which phase of the COVID crisis their organisation has entered, two in three European and Portuguese CFOs report that they are already preparing for and shaping the post-pandemic future – what is defined as the “Thrive” phase. Only 14 per cent of European CFOs and 19 per cent of Portuguese CFOs feel they are still in survival mode (Figure 4).

Although the positive mood is widespread the data reveals substantial differences across industries. For example, in Europe more than 80 per cent of CFOs in life sciences and health care (LS&HC) consider their organisation to be already in the Thrive phase but only 38 per cent in tourism and travel, where more than half the CFOs say they are still battling to ensure their company’s survival. Interestingly, CFOs in retail are particularly bullish, with 66 per cent reporting that they are in the Thrive phase. By pushing consumers towards online shopping the pandemic has forced retailers to invest in and expand their omnichannel capabilities, propelling them towards new ways to serve their clients. Overall, there is a higher percentage of Portuguese CFOs believing their companies are in the Thrive phase than their European peers, except for transport & logistic, industrial products and services, construction and technology, media, telecommunications (TMT).

Figure 4. A majority of European companies are already in the Thrive phase, focusing on the post-pandemic future. What phase of the COVID-19 crisis is your organisation in?*

Portuguese CFOs in life sciences and business & professional services industries are 100 per cent confident to be in the Thrive phase, while less than 50 per cent of the Portuguese CFOs in tourism and travel and in transport and logistic consider to be in that phase (Figure 4).

Company size also affects the responses. In general, smaller companies (defined as those with annual revenues of up to €100 million) appear to be at an earlier stage of the recovery, with close to 25 per cent of European and Portuguese respondents reporting that they are still in the “Respond” phase. By contrast, only 6 per cent of European CFOs and 0 per cent of Portuguese CFOs in large companies (defined as those with annual revenues of €1 billion or more) are in the same position.

Figure 5. The share of companies in the “Thrive” phase varies substantially across industries

Different recovery patterns

CFOs' views on when their revenues will return to pre-pandemic levels also point to overall improvement. More than 40 per cent of CFOs report that they are already at or above pre-crisis levels – almost twice as many as last autumn, when this figure was only 23 per cent.

There are, however, large differences between countries, with, not surprisingly, a smaller share of CFOs reporting that they are already at or above their pre-pandemic level in economies that took a harder hit (Figure 6). For example, while almost two-thirds of CFOs in Denmark and Russia say that their revenues are already at pre-crisis levels, less than 30 per cent do in Portugal, Spain, Greece and the UK.

In Portugal, at a slower pace, only 25 per cent of CFOs report that they are already at or above pre-crisis levels, even so improving when compared to the previous CFO survey edition (17 per cent).

Figure 6. The larger the GDP drop in 2020, the lower the share of companies that are at or above the pre-pandemic level.

Source: Deloitte European CFO Survey, Spring 2021. GDP data: IMF, World Economic Outlook, April 2021. Annex Table 1.1.1 accessed on April 9th, 2021.

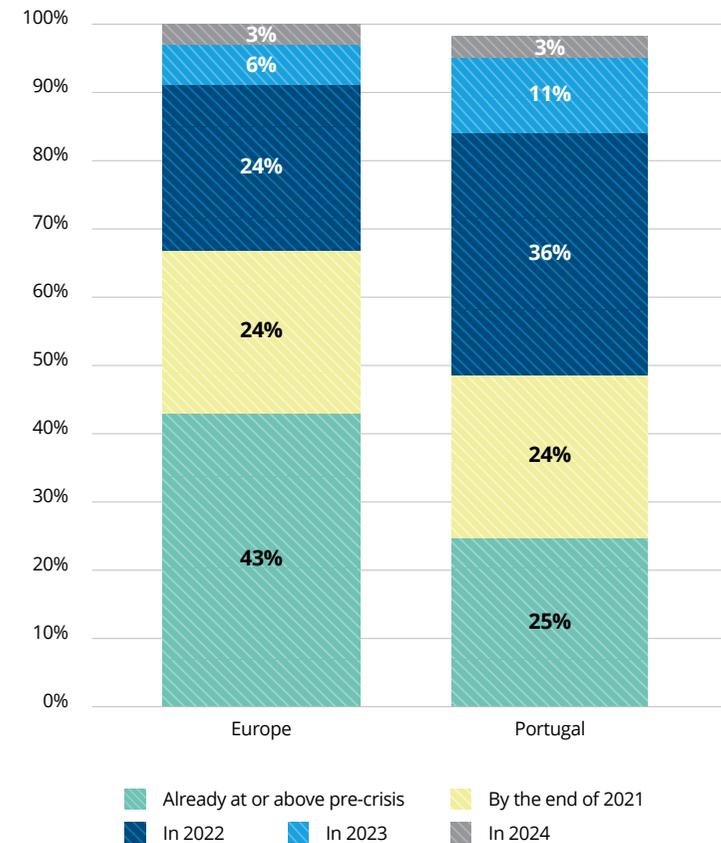

Despite the general rise in optimism, some CFOs see a long road to recovery. While, on average, about a quarter of European and Portuguese respondents expect to return to the pre-crisis activity level by the end of 2021, another quarter of European CFOs and one third of Portuguese respondents expect full recovery will have to wait until 2022, and about 10 per cent of European respondents and 14 per cent of Portuguese expect a full recovery even later than that (Figure 7).

In Europe, expectations are particularly low in the tourism sector where no company has already returned to pre-pandemic levels and only 15 per cent expect to do so by the end of this year. A relative majority (40 per cent) expect full recovery by 2023. CFOs in the automotive sector are also more likely to see a slow road to recovery, with only 19 per cent reporting that they are already at pre-crisis levels and another 36 per cent expecting to bounce back by the end of 2021. At the other end of the spectrum, three-quarters of CFOs in the financial sector say they are already at pre-crisis levels or expect to be by the end of the year.

In Portugal, similar of what is happening in Europe, expectations are particularly low in the tourism sector where no company has already returned to pre-pandemic levels and only 30 per cent expect to do so by the end of the next year. A relative majority expects full recovery by 2023. CFOs in the automotive sector are also more likely to see a slow road to recovery, with only 7 per cent reporting that they are already at pre-crisis levels and another 40 per cent expecting to bounce back by the end of 2021. In a more positive scenario are the CFOs from industrial products & services and financial services with more than 40% saying they are already at pre-crisis levels or expect to be by the end of the year.

Figure 7. One-third of respondents don't expect to get back to pre-pandemic levels until 2022 or later. Based on the information you have so far, when do you expect your company to return to a pre-crisis level of revenue generation?

Wary and yet bold – investments and hiring intentions

As in the previous edition of the survey, CFOs remain concerned about a possible weakening in demand and about the overall state of the economy. CFOs see a little less uncertainty than in the autumn but a net balance of 65 per cent still consider the current levels of economic and financial uncertainty as high or very high.

In Portugal, there is also a slight decrease in uncertainty levels comparing to the autumn survey. Nonetheless, 70% of CFOs still consider the level of uncertainty facing their business to be high and very high.

And yet their investment intentions have surged, with almost half the CFOs planning to increase their capital expenditures (CAPEX) over the next 12 months, and only 14 per cent planning a reduction. In Portugal, 44 per cent of CFOs consider maintaining the capital expenditures (CAPEX) over the next 12 months, 38 per cent intend to increase, and only 19 per cent are planning a reduction. The last time that CFOs showed a similar willingness to invest was in March 2018, not only well before the pandemic, but also before trade wars and rising geopolitical tensions on the world stage began to heighten uncertainty (Figure 7).

Two trends may spur investment

As the pandemic is far from over and there are plenty of risks to the economic recovery, companies' plans to increase their CAPEX are a positive sign. This seems more than a rebound from last year's depressed levels, when many cut their spending plans. COVID-19 brought with it new demands related to workers' and customers' safety as well as a need to increase digital interaction. All of this requires investment in new equipment, automation and digital technologies.

Perhaps surprisingly the pandemic has also increased the attention paid to environmental issues, adding a sense of urgency to efforts to shift away from fossil fuels. Major economies have announced plans to achieve carbon neutrality by 2050, providing a long-term signal on the direction of travel. The number of investors who have signed up to the UN Principles for Responsible Investments (PRI) has further increased to over 3,000, representing over US\$ 103 trillion in assets under management. The increasing pressure on companies to achieve sustainability goals means in turn more investment in analytics, efficient equipment and environmentally friendly buildings, to name just a few. The combination of the two trends, digital and environmental, means future investment levels are likely to be higher than in the recent past.

Wary and yet bold – investments and hiring intentions

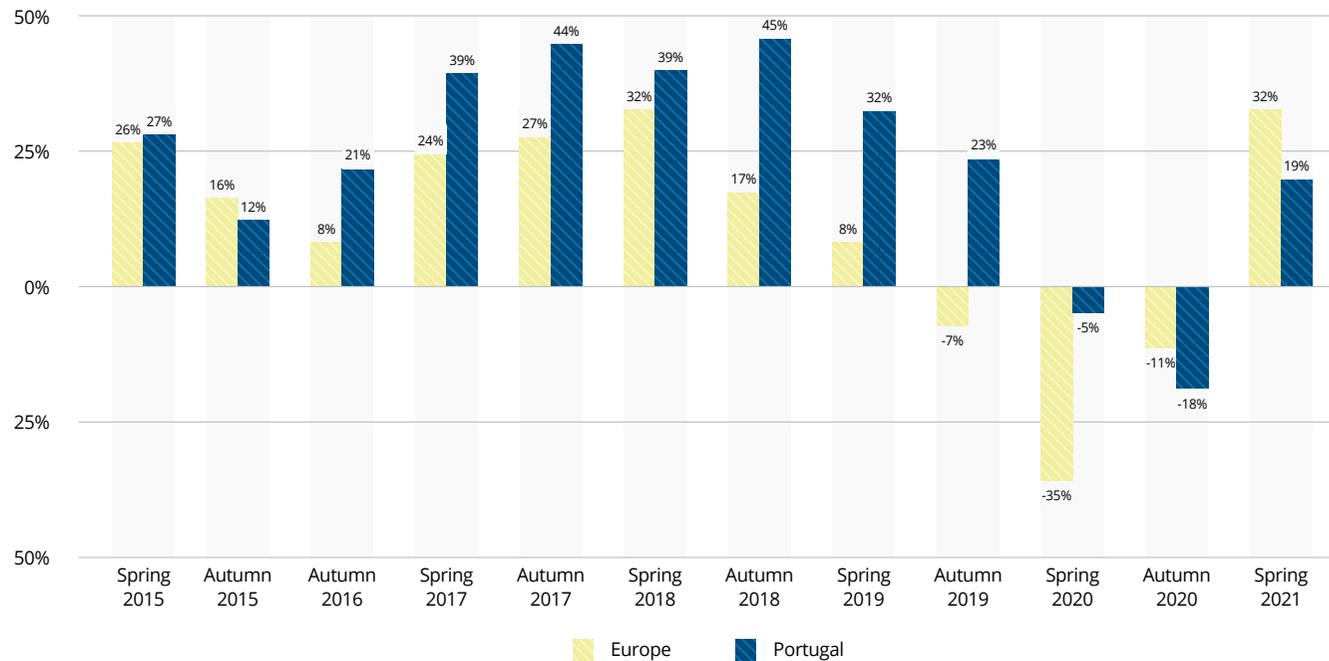

A brighter outlook for employment

The outlook for employment shows clear signs of improvement. A net balance of 24 per cent of European CFOs expect to increase their workforce over the next 12 months, with 43 per cent expecting an increase against 19 per cent expecting a decrease. This represents not only the first positive balance for employment in two years but also the second highest level since the beginning of the series in 2015. In Portugal, half of the CFOs believe there will be no changes in their workforce numbers but there are more CFOs expecting an increase (33 per cent) than those expecting a decrease in workforce (16 per cent).

The outlook is positive across all industries – even those worst hit by the pandemic. The hiring intentions of European CFOs in tourism and travel, for example, are among the most bullish, with a net balance of 36 per cent planning to add to their workforce. Companies in the “Thrive” phase are more likely to be bullish on employment, but the net balance of intentions is positive too among companies that are not yet out of the worst phase of the crisis. And in one-third of the countries surveyed CFOs mention shortages of skilled labour as one of their top three concerns, (in Portugal 27 per cent felt the same) whereas in last autumn that was the case for only one country. From an employment perspective, these positive signals on employment are welcome as the COVID-19 pandemic has taken its toll on workers – especially women and young workers.

In Portugal, while the majority of CFOs across different industries expect to maintain the current level of employees in their organization, half of the CFOs in tourism and travel, an industry that has been greatly affected by lockdown policies, expect to increase their workforce over the next 12 months, as well as CFOs in business and professional services and retail.

Figure 8. The outlook for capital expenditures turns positive. In your view how are capital expenditures for your company likely to change over the next 12 months? (% net balance)*

Will inflation pick up?

Talk of inflation has increased lately. The argument is that once vaccines are rolled out and economies reopen, cash-rich consumers will go on a spending spree.

At the same time production and transport bottlenecks will prevent businesses from satisfying the sudden surge in demand. Consequently prices will begin to rise. Furthermore, central banks' balance sheets have expanded substantially in many countries, largely through purchases of rising government debt. It is argued that this monetary expansion and rise in government debt could cause a loss of confidence in economic and financial stability, in turn causing prices to spiral.

The survey does reflect CFOs' expectation that inflation will rise. Inflation expectations have risen in a majority of countries compared to the autumn. But they remain below the levels in spring 2019. Among countries in the euro area, the expected inflation rate a year from now averages 1.37 per cent. In Portugal inflation expectations are even lower at 0.95 per cent, still well below the European Central Bank's inflation target of 2 per cent. Thus, across Europe, financial executives do not seem to be planning for a high-inflation environment.

Figure 9. CFOs' expectations on the average inflation rate – countries in the Euro area and selected countries outside the Euro area. What do you think the inflation rate (for the Consumer Price Index) will be in your country in 12 months' time?

Conclusion: a dynamic period ahead

The world has experienced 12 months like no other in living memory. The ingenuity, resourcefulness and resilience of individuals and businesses has been tested. Workers have adapted to new ways of living and conducting business despite terrible losses, restricted mobility and extraordinarily high levels of uncertainty.

Many risks remain but recovery from the pandemic now seems near at hand and CFOs across Europe are looking to the future with confidence.

The business environment as the world exits the pandemic, however, is quite different to how it was before it. COVID-19, while obstructing business, has accelerated change. New technologies and ways of working have come into play. Awareness of environmental dangers has risen, and so has the willingness to address these risks. The drive to leave behind fossil fuels has speeded up.

Nor will the pandemic and the efforts to overcome prove the only engine of change. Other issues, too, will shape coming years, from rising geopolitical tensions to growing awareness of social issues and the complexities of new working models and forms of interaction.

There is much for business executives to analyse and assess, and much that they will need to do. An exciting period of innovation and dynamism appears to lie ahead.

New technologies and ways of working have come into play. Awareness of environmental dangers has risen, and so has the willingness to address these risks. The drive to leave behind fossil fuels has speeded up.

The Deloitte European CFO Survey

Since 2015 Deloitte has conducted the European CFO survey, giving voice twice a year to senior financial executives from across Europe. The data for the Spring 2021 edition were collected in March 2021 and garnered responses from 1,559 CFOs in 19 countries and across a wide range of industries (Figure 9).
