Dear Our Valued Clients,

We are very pleased to release Quarterly Economic Report Q1|2016 to you. It is a part of our constant endeavors to provide valuable insights to our clients. This high level update and summary of the market conditions will hopefully be beneficial in helping you to understand the business environment so as to support you in your decision making process and further development of your business strategies.

Global economy continues to be sluggish from the economic turbulence such as financial fluctuation, volatility in oil prices, weaker capital flows and subdued global trade. The projection for global economic growth is 3.2% in 2016. The recovery is forecasted in 2017 and beyond, triggered by emerging market and developing economies. Asia’s growth will expectedly remain steady as some economies such as India and ASEAN gradually grow. Stronger aggregate growth of ASEAN economy will accelerate from 4.6% in 2015 to 5.0% in 2016. Meanwhile, Thai economic growth will slightly improve and reach 3.0% in 2016 underpinned by government consumption and investment as well as the progress of large-scale infrastructure projects.

On behalf of Deloitte Thailand, we very much look forward to supporting you in the dynamic and changing business environment. If you have any questions or inputs, please do not hesitate to contact us at Deloitte.

Best regards

Subhasakdi Krishnamra
Country Managing Partner
Executive Summary
Executive Summary

Global economy continues to be sluggish from the economic turbulence. The projection for global economic growth is 3.2% in 2016 but the recession seems unlikely.

Global and major economies’ GDP growth in 2016

- United States: 2.0%
- Euro Area: 1.4%
- China: 6.5%
- India: 7.4%
- Japan: 1.0%
- Germany: 0.7%
- Myanmar: 7.9%
- Thailand: 3.0%
- Indonesia: 5.2%
- Philippines: 6.0%
- Singapore: 2.0%
- Malaysia: 4.5%
- Cambodia: 7.2%
- Brunei: 0.7%

ASEAN’s GDP Growth in 2016

- World: 3.2%
- Asia: 5.3%
- ASEAN: 5.0%

Sources: ADB, EIU, European Economic forecast, & IMF
Remark: 1/ Asia’s GDP growth excl. Japan
• Global economy is still facing many uncertainties and risks that could weaken growth such as financial fluctuation, volatility in oil prices, weaker capital flows and subdued global trade. The sign of recovery has found to be low but recession seems unlikely. The global economy is projected to recover in 2017 and beyond, triggered by emerging market and developing economies as their economies gradually grow.

• Growth in developed economies will be steady and primarily rely on the central bank stimulus. A slight recovery is expected to continue in 2016. Meanwhile, growths in emerging countries and developing economies remain challenging owing to the ongoing slowdown in some large economies such as China, Brazil, Russia, and some countries in the Middle East.

• Despite the further slowdown in Chinese economy, the economic growth in Asia will expectedly remain steady as some economies such as India and ASEAN have continued to grow. Thus, Asia’s economic growth in 2016 is forecasted to moderate slightly at 5.3% compared to 5.4% in 2015.

• Stronger aggregate growth of ASEAN economy is forecasted to accelerate from 4.6% in 2015 to 5.0% in 2016 as AEC member states will continue their infrastructure development initiatives in the coming years.

• Thai economic growth in 2016 is projected at 3.0% underpinned by government consumption and investment as well as the progress of large-scale infrastructure projects.

---

**Sources:** Compiled from various research houses & agencies (e.g. IMF, ADB, EIU, NESDB) & DTTJ Analysis

**Remark:** Asia’s GDP growth excl Japan
Global & Asian Economic Review
The global economy is set for a sluggish year. The slowing recovery drags on with uncertain pace.

Growth in developed economies will remain steady. Meanwhile, the ongoing slowdown in some large emerging countries and developing economies poses challenges on the global growth.

**World Economy**
- Global economy is still facing many uncertainties and risks that could weaken growth such as financial fluctuation, volatility in oil prices, weaker capital flows and subdued global trade. The global economy is projected to recover in 2017 and beyond, triggering by emerging market and developing economies as their economies gradually grow.

**United States**
- The economic outlook for 2016 is projected to grow 2.0% supported mainly by the strong private spending as a result of healthy job growth, higher real wages and disposable income, an expansion in lending, and house price gains; however, the strong dollar will reduce demand for US exports.
- A mild recession in 2019 is forecasted as the business cycle comes to an end. Without the significant investing in productivity area and a broad improvement to the global economy, the average economic growth of 1.9 is expected in 2017-2020.

**Euro Area**
- An improvement of labor market, higher investment, low oil prices and ultra-loose monetary policy will continue to accelerate growth in the coming years; however, some challenges such as political uncertainty, weak prospects in emerging markets, and security concern are likely to drag on the region’s economic performance.

**Asia (excl Japan)**
- Asia’s growth in 2016 will grow at 5.3% compared to 5.4% in 2015 as the stronger economic growth in some economies such as India and ASEAN help offset the effect from economic slowdown in China.
- A projected slowdown in aggregate investment spending and weaker demand in developed economies are expected to limit the region’s growth prospects from the 2016 onwards.

---

Sources: ADB, EIU, European Economic Forecast, & IMF.
The region need to cope with both internal and external challenges to gain economic momentum

Chinese economy is still unlikely to see significant improvement in 2016. Meanwhile, the gradual growth of other economies such as Japan, India, and ASEAN will help boost the region’s performance.

### Japan
- Japanese economy is facing the difficulty to achieve the stable growth owing to subdued private spending and weak global demand. An economic slowdown will unexpectedly persist to 2017 since the consumption tax rate will be raised to 10%.

- The main challenge to the upcoming year is the demographic factor. The contraction of overall population and labor force will cause the decline in consumer and cooperate consumption. Thus, economic growth is projected to average 0.9 a year in 2017-2020.

### China
- The Chinese economy is struggling with a prolonged economic slowdown due to the structural reform. It is forecasted that economic growth in 2016 will reduce to 6.5%, compared to 6.9% in 2015.

- An average real GDP growth in China is set to 5.0% in 2017-2020 owing to the slow pace of reform, a failure to balance the debt level, weak private consumption, and the slowdown in investment, especially housing construction.

- With bold support from Chinese government via cheap credit, loose monetary policy, and real investment, it should help cushion the chance of the hard landing due to the domestic imbalance and weak external demand.

### India
- Economic growth in 2016 is projected at 7.4% led primarily by service sector. The strong fundamentals such as high saving rates, rising labor force growth and a rapidly expanding middle class will help sustain the performance in 2017-2020.

- The electricity and bankruptcy reforms will help support the manufacturing sector and improve capital allocation and financial sector. Nevertheless, the shortages of labor in key sectors and the difficulties involved in shifting resources to higher productivity manufacturing could constrain the future growth.
AEC Economic Review
Overall, AEC competitiveness is rising.

### Global Competitiveness

- ASEAN-5 including Singapore, Malaysia, Thailand, Indonesia, and Philippines, overall, can maintain their competitiveness in the global level despite threats from slow global growth and lower commodity prices.
- Cambodia, Lao PDR, Myanmar, and Vietnam or the so-called “CLMV” could perform better in the coming years with the use of its abundant resources and uplifted labour skills.
- The implementation of the AEC Blueprint 2025 will help transform the region to become the middle-income economy and, thus, improve the regional standard of living.

- Singapore, Malaysia, and Thailand are the top 3 countries with high score on ease of doing business in SEA region.
- The inauguration of AEC in December 2015 and serious implementation of AEC Blueprint 2025 are expected to induce a significant change momentum for the region.
- However, domestic regulations and the lack of public infrastructures remain the obstacles to expedite the AEC to reach its growth potentials.

Sources: Key Indicators for Asia and The Pacific 2015 by ADB, IMF, & DTTJ Estimates

* Note: Myanmar combines private and government consumption.
AEC is expected to have a better growth momentum in 2016 and years after amid weakness in the world economy.

Stronger aggregate growth of AEC economy is forecasted to accelerate from 4.6% in 2015 to 5.0% in 2016 and average 5.4% during 2017-2020 as AEC member states will continue their infrastructure development initiatives in the coming years.

**Real GDP growth rate of ASEAN economies from 2014 – 2020F**

Sources: ADB, EIU, IMF, NESDB, & Research Houses.
Brunei

The sultanate’s economy is projected to return to growth with assumptions that oil and gas production continues to recover gradually and that the government keeps significant investment in infrastructure.

- GDP growth in 2016 is forecasted at 0.7% closely linked to the performance of the oil and gas sector, which accounts for two-thirds of the economy.
- In addition, government budget deficit is expected to be significant around 13.5% of GDP in 2016.
- Infrastructure development projects such as a bridge to Pulau Muara Besar Island, Chinese-invested petrochemicals refinery will continue over the next 3-4 years. These will support production in the future and help diversify the economy through export-oriented manufacturing and services instead of a massive reliance on oil and gas.
- Lower global oil and gas prices further diminish Brunei’s export revenue and cause current account deficit in 2016. It is expected that some recovery in oil prices should rejuvenate exports and current account status in 2017.

Brunei economy forecasted to grow 0.7% in 2016

\(^1\) % of GDP.
Cambodia

Cambodian economic outlook is positive driven by private consumption, labour-intensive manufacturing, construction, and services, as well as moderate inflation.

- Economic growth is projected at 7.2% in 2016 driven largely by private consumption, which accounts for around three-quarters of GDP. Incomes will continue to rise rapidly as productivity rises and the development of higher-value sectors, such as low-end electronics manufacturing.
- Investment growth is still positive. Cambodia’s growing relations with China help access the capital that China is making available for overseas infrastructure projects under “One Belt, One Road” programme sponsored by the China-led Asian Infrastructure Investment Bank (AIIB).
- Rapid credit growth and a real estate boom have heightened risks in the financial sector. Other risks include sluggish growth in major export markets and a stronger US dollar that, under high dollarization, is likely to further erode Cambodian competitiveness.

Cambodian economy forecasted to grow 7.2% in 2016

Indonesia

Public infrastructure investment is considered as the major driver of economic growth from 2016 onwards. Further reforms will help boost productivity, domestic and foreign investment, and encourage new sources of growth.

- Indonesian economy is forecasted to grow 5.2% in 2016. Public investment is expected to accelerate in 2016 as key infrastructure projects initiated in the previous period gather momentum and new public mega projects get under way.

- Private consumption is projected to have a better growth affected by stabilized inflation. In addition, higher government spending will encourage private investment, which, together with the implementation of structural reforms, will enhance the investment climate.

- Structural reforms will encourage several industries with potential for strong growth include tourism, marine fisheries, aquaculture, e-commerce to serve the growing middle class, and agricultural commodities with higher value added.

Lao PDR

GDP growth is forecasted at 7.5% in 2016 driven by hydropower and infrastructure projects. Rising tourist arrivals and inflows of remittances from Thailand will help sustain private consumption.

- Hydropower construction projects in the pipeline and work on a railway to China continue to reinforce GDP growth from 2016 onwards.
- Investment spending will accelerate, private consumption will pick up thanks to low inflation and mineral and power export will continue to expand.
- Growth in construction will stem from new hydropower plants (e.g. the 1,300 mega watt Xayaburi project) as well as by new commercial, industrial, and residential developments.
- Service sectors will gain a robust expansion as a result of tourism boom, development in finance and telecommunications.
- Agriculture is projected to pick up in 2016, assuming better weather. However, mining is likely to be subdued in light of soft global demand and prices for minerals.

Malaysia

Malaysian economic slowdown is forecasted to continue in 2016, and in turn, growth momentum is likely to pick up in 2017 due to gradual recovery of global commodity prices.

- Real GDP growth in 2016 is projected at 4.5% as a result of export slowdown, before it starts to recover in 2017.
- Malaysian exports remain subdued as the People’s Republic of China, Malaysia’s second biggest export market, and economic activities in major industrial economies are sluggish during 2016.
- Domestic demand is expected to be the key driver of growth, but dampened by softer labor and property markets, lower earnings from oil and gas export and other commodities, high household debt, slower growth in credit, and fiscal tightening.
- Public investment projects under the Eleventh Malaysia Plan investment such as mass rapid transit, light railway systems, and so on, will boost growth in fixed investment.

Myanmar

Myanmar’s economic growth is likely to accelerate during 2016 as a result of better political conditions, recovery in agriculture, and increases in foreign direct investment.

- The new civilian government starting its office in April 2016 have committed to continuing reform, which is necessary for Myanmar to reach its growth potential, estimated at 8.0% annually.

- Rapid real GDP growth in the coming years will be buttressed by large FDI projects in various industries, particularly oil and gas and public infrastructure. FDI will continue to rise as regulatory and legal reforms are introduced.

- Recent bills passed have paved the way for the development of a burgeoning financial sector and for foreigners to own real estate to thrive.

- Among key challenges facing the incoming civilian government are high inflation, fiscal and external trade deficit. Also, upgrading the transport and logistics system is the major longer-term challenge.

Philippines

Real GDP growth in 2016 is projected to gain better momentum with higher investment and consumption despite facing El Niño impacts on agricultural outputs and utility prices. Inadequate public infrastructure, however, remains the major obstacle to growth in the future.

- Philippines’s economy is expected to grow 6.0% in 2016. Private consumption remains the major growth driver.
- Rising employment, higher government salaries, modest inflation, and healthy remittance inflows taken together underpin robust consumer spending.
- In 2016, the government has kept expansionary fiscal policy or budget deficit ceiling at 2.0% of GDP and public investment accounts for 5.0% of GDP. Major infrastructure projects include investments in roads, agricultural infrastructure, and schools.
- To sustain strong growth momentum, Philippines’s government requires policy continuity to foster the development of infrastructure and human capital, investment climate improvements, and better governance.

Singapore

Singapore will continue a moderate growth in 2016 as a result of weak global and domestic demands. Accommodative fiscal and monetary policies have been implemented to foster economic growth momentum in the coming years.

- Real GDP growth is forecasted at 2.0% dropped from 2015’s although expansion in services outweighs weakness in manufacturing and construction, which be affected by low external demand and higher borrowing costs.

- Consumption will continue to grow in 2016 as the government boosts spending on social welfare, health infrastructure, public transport, and the development of the Changi Airport and a planned high-speed rail link with Malaysia.

- Singapore’s downside risks include the tepid global economic outlook, uncertain domestic property prices and tightening of the labour market.

- Lower commodity prices and a slowdown of the People’s Republic of China economy could result in moderate export growth in 2016.

Viet Nam

Continuous expansion of manufacturing and construction will boost real GDP growth in 2016. Foreign direct investment in conjunction with low inflation also accommodate investment and consumption.

- The Vietnamese economy is projected to grow 6.8% in 2016 and maintain average 6.6% during 2017-2020 due to strong export-orientated manufacturing and FDI inflows.
- Investment growth will be largely driven by trade agreements with the European Union and Republic of Korea, and commitments to participate in both the Trans-Pacific Partnership and the Eurasian Economic Union.
- Vietnam remains a major beneficiary of both the migration of low-cost export manufacturing from China and a firming of demand in developed markets.
- Slow progress on bank and state-owned enterprise reforms imposes downside risks to the growth outlook. Undercapitalized banks with deficient financial transparency remain exposed to shocks.

Vietnamese economy forecasted to grow 6.8% in 2016

ASEAN Physical Connectivity
What is Physical Connectivity?

Physical Connectivity in ASEAN is a part of Master Plan on ASEAN Connectivity aiming to link ASEAN to key global market.

It is meant to build a well-constructed ASEAN where brings people, goods, services, and capital closer.

Why is it important?

The enhancement of Physical connectivity among the member states of ASEAN will help narrow the development gap in ASEAN region.

The development of physical infrastructure within the regional grouping promises tremendous business opportunities.

It is estimated that a one percent increase in infrastructure spending in Asia can increase private consumption by one to two percent of gross domestic product (Pushpanathan (2011)).

Sources: Master plan on ASEAN Connectivity, ASEAN Secretariat
Connectivity Key to sustainable ASEAN Community, S. Pushpanathan (2011)
Connectivity in ASEAN refers to the physical, institutional and people-to-people linkages

Physical Connectivity encompasses transport, information communications technology (ICT) and energy infrastructure as well as the regulatory framework and the software necessary to deliver associated services and utilities (Master Plan on ASEAN Connectivity)

Sources: Master plan on ASEAN Connectivity, ASEAN Secretariat
Transportation

Land Transportation

It aims to link all ASEAN member states and neighboring countries with an efficient, safe and integrated regional land transpiration network. There are two flagship projects which have been developed to pursue land transportation connectivity in ASEAN.

Road Infrastructure: ASEAN Highway Network (AHN)

ASEAN Highway Network (AHN) is an extension of the Trans-Asian Highway network within the ASEAN region. It is a key flagship in ASEAN road transport connectivity.

- With a length of 38,400 kilometers through all ten ASEAN countries, and 23 designated routes, the AHN plays a crucial role in facilitating the movement of goods among ASEAN member states.
- A significant progress in term of expanding the length and improving the quality of the AHN has been made by each ASEAN member states.
- Missing links remain and road quality has not been as good as expected. So far the missing links are mostly in Myanmar and the quality of roads is still below Class III standard in some ASEAN member states.

### Designated Transit Transportation Routes (TTRs) in ASEAN

Note: 1/ Designated TTRs for Singapore to be submitted at the time of deposit of Instrument of Ratification for Protocol 1 of the ASEAN Framework Agreement on the Facilitation of Goods in Transit.

Sources: Master plan on ASEAN Connectivity, ASEAN Secretariat
**Rail Infrastructure: The Singapore-Kunming Rail Link (SKRL)**

SKRL is a flagship project consisting of main Singapore–Malaysia–Thailand–Cambodia–Viet Nam–China (Kunming) route, and spur (or branch) lines between Thailand and Myanmar and between Thailand and Lao PDR.

- A length of 6,617 kilometers rail development project to link ASEAN with China.
- Approximately 862 kilometers of missing link in Cambodia, Myanmar, Thailand, and Viet Nam.
- Feasibility study was already completed for a spur line from Vientiane (Lao PDR) to Thakhek (Lao PDR) to Vung Ang (Viet Nam) but the construction is pending now.
- The future interest is the extension to Surabaya, Indonesia where the possible nodes are in Malaysia and Singapore.

**Inland Waterways**

The ASEAN region has approximately 51,000 kilometers of navigable inland waterways which have been identified as a large potential in reducing freight transportation costs.

<table>

Distance that 1 tonne of freight can be moved with 1 litre of fuel:

- Energy efficiency
  - 21 km.
  - 71 km.
  - 182 km.

River freight also involves much lower external costs associated with noise and air pollution, infrastructure investment, congestion and accidents.

Ad-Hoc Expert Group Meeting for Cooperation on Facilitation of International Railway Transport,
Maritime Transportation

The maritime transportation plays a crucial role in trading. It is the fundamental mode of transportation for liquid cargo (petroleum and oil products) and bulk cargo (minerals) in ASEAN.

- 47 ports in ASEAN are designated to improve shipping across the region. Nevertheless, the varying levels of port infrastructure and maritime services pose a challenge on creating the efficient shipping network in ASEAN.
- It is expected that improvement of maritime network will reduce costs and encourage both Intra- and Extra-ASEAN trade.
- With the exception of Singapore and Malaysia, other ASEAN member states are ranked poorly (Source: UNCTAD Liner Shipping Connectivity Index).

Source: JICA Study on Guidelines for Assessing Port Development Priorities 2009

Air Transportation

A rapid move of people, money, and information in global scale, the development of the liberalization of air transportation, an increasing Low Cost Carriers (LCCs) have stimulated the role of air transportation in ASEAN.

- A number of international airports has increased / improved owing to rising air traffic volume in the region.
- Overall, the capital airports of ASEAN member states are ready to cope with air travel and air cargo. However, some problems regarding airport facilities and lack of warehouses could limit the growth in air traffic in some ASEAN countries.
- Currently, ASEAN member states focus on the implementation of ASEAN Single Aviation Market (ASAM).

Key Challenge
- Harmonization of air navigation systems and procedures
- Identification of new routes
Information Communications Technology

An improvement of Information Communications Technology (ICT) infrastructure is inevitable for ASEAN member states to stimulate trade, investment, and market size by facilitating information exchange, reducing costs of business and transaction, and connecting people.

<table>

Note: 1/ Ranked according to ICT use, 1-7 (best)

- ICT infrastructure includes fixed, mobile, and satellite communication networks and the internet as well as the software supporting the development and operation of these communication networks (Master Plan on ASEAN Connectivity).
- Digital divide across ASEAN member states, lack of technological readiness, and insufficient innovation in some countries in ASEAN pose a formidable challenge to improve the competitiveness of their ICT sectors.
- With the exception of Singapore, the rest of ASEAN member states still need to nurture technological innovation, improve the accessibility, and encourage investment in ICT infrastructure and service to reduce the digital divide.

Source: ASEAN Logistics Network Map Study, JETRO 2008
Energy

Energy is one of the key factors contributing to the economic development. There are two flagship projects which have been developed to bring about the cooperation in energy between ASEAN member states in order to boost and sustain the economic growth in ASEAN region.

The Trans-ASEAN Gas Pipeline (TAGP)

TAGP is a part of the development of a regional gas grid by 2020 which will provide the greater energy security and transport gas across ASEAN borders.

- The establishment of infrastructure for the transportation of liquefied natural gas (LNG) is also planned, as countries such as Malaysia, Singapore and Thailand undertake construction of LNG terminals.

Source: ASCOPE Report to 28th Senior Officials Meeting on Energy, 2010

ASEAN Power Grid (APG)

APG is one of the flagship projects aiming to support ASEAN member states to cope with the increasing demand for electricity, to encourage electricity trade across borders, and to optimize the electricity generation and usage in ASEAN region.

- Challenges for the APG achievement rely on the future interconnection projects since marine/undersea and inland cable interconnections still be required across the whole region.

Source: HAPUA Report to 28th Senior Officials Meeting on Energy, 2010

- However, the economic viability of the planned grid interconnection projects are not accepted by some countries even if the projects have been assessed by HAPUA to be technically feasible.

AEC Business Survey 2016: In Search of Growth Opportunities
Introduction

The emergence of Asian Economic Community (AEC) is seen as a window of opportunity and at the same time as a potential threat to our clients.

To understand the impact of the AEC on Client’s business decision-making and practices, and to improve our services accordingly.

Methodology

An Online Survey
Conducting an online survey on DT(TH)’s clients

General Information
- Job Position
- Type of Business
- Sector & Industry
- Company Headquarter

Opportunity
- Competitiveness
- Market Accessibility
- New Market
- Business Gain

Awareness
- Preparation
- Expected Benefit
- AEC Achievement

Challenge
- Business Challenge
- AEC growth Challenge

Desired Outcomes of the survey
A brief analysis of client’s situation on AEC
Identification of business opportunity and challenge
Development of key business implications
General Information

59 Participants

Job position

- 40% Top Management
- 30% Senior Executive
- 30% Senior Manager

Type of business

- 23% Local Company
- 5% Conglomerate Company
- 72% Multinational Corporation (MNC)

Sector & Industry

- 62% Service
- 34% Manufacturing
- 4% Agriculture

Company Headquarters

- 55% CIP
- 17% E&R
- 14% FSI
- 9% TMT
- 3% LSHC
- 2% PS

Awareness of the AEC

80% Ready Go Live!

Expected benefit from AEC

Singapore, Vietnam, and Thailand are anticipated to gain benefit from AEC

47% believe Thai government policies will enable the company to compete in AEC

AEC Achievement

68% say AEC member states will be able to achieve full economic integration

**Business Opportunities in the AEC**

76% say that AEC is an **Opportunity** to expand business.

Top 3 market accessibility:
- Singapore
- Vietnam
- Indonesia

Business gain:
- Access to a larger market
- Lower cost
- Technology innovation and know-how
- Product differentiation

Expected revenue increase after launching AEC **Less than 20%**

**Business Challenges in the AEC**

AEC growth challenge:
- Labor skills: 4.5
- Global economic slowdown: 4.4
- Political conditions: 4.4
- AEC governance structure: 4.3
- Technology and innovation: 4.1
- Social and cultural issues: 4.0
- Environmental issues: 3.9
- Lower commodity prices: 3.7

New Market

Joint venture with local firm

Subsidiary

Trade

Singapore

Vietnam

Indonesia

Market Accessibility

Business gain
Summary

Challenges

- Labor skills, Global economic slowdown, and Political condition are ranked as the top three challenges for the future of the AEC economic growth.
- Top three most challenging factor for doing business in AEC are host’s country laws and regulations, market size, and tax and investment incentive.

Opportunities

- AEC is seen as a window of opportunity for expanding business; however, its impacts might not be strongly significant.
- The top three locations for business expansion are Singapore, Vietnam, and Indonesia.
- Joint venture with local firm, Subsidiary, and trade are considered as the investment channels.

Awareness of the AEC

- 80% of respondents have already prepared for doing business in the AEC.
- Singapore, Vietnam, and Thailand are considered as the top 3 countries gaining benefits from AEC.
- Almost 50% of respondents believe that government policies will enable them to compete in the AEC.
- 68% of respondents are optimistic about the full achievement of AEC.

General Information

- Most of respondents are MNC in service sector.
- 86% of respondents are grouped in CIP, E&R, and FSI.
- Almost half of respondents have HQ in Japan and Thailand.
Thailand Economic Review
Thailand

Thai economic growth in 2016 will be underpinned by government consumption and investment as well as the progress of large-scale infrastructure projects. Tourism, another key driver, will help secure positive current account status.

- Real GDP growth is forecasted at 3.0% in 2016 and accelerate years after subject to the progress of public infrastructure investments and calm the political climate after the general elections proposed during the second half of 2017.

- Private consumption will continue to rise at a moderate pace in 2016 partly because of the government’s stimulus measures. But private consumption remains limited by severe drought, low prices for agricultural products, and high household debt.

- Investment is expected to increase in 2016 under the government’s Transport Infrastructure Master Plan from 2015-2022. Implementation of 20 projects will be under way in 2016 onwards. These projects include motorways, railways, mass transit rail lines, sea ports, and airports.

- Good progress on the major investment projects will foster business confidence, and in turn, private investment. The Thai government allows private sector to participate in infrastructure projects through fast-tracked public–private partnerships (PPP) including mass rapid transit lines, motorways, a renewable energy power plant and so on.

- Tourism sector, which is expected to attract more than 32 million foreign tourists and generate around 2.3 trillion Baht, will help secure positive current account status during 2016.

- A major challenge facing Thai government is how to boost competitiveness of SMEs accounting for 99% of Thai businesses. Strong SME support policy and measures as well as better co-operations between public and private sectors could provide better opportunities for SMEs to thrive in the AEC context, but also be part of global value chains.

Thailand Reform Review
Thailand’s Current Politics and Administration system

The National Council for Peace and Order (NCPO)
To maintain peace and security in the country and to ensure a smooth reform process.

Government
The Interim Government
To perform public administration duties in both economic and social aspect.

The National Legislative Assembly
To perform functions of National Parliament, including passing legislations, approving emergency decrees, and approving treaties.

The National Reform Steering Assembly
To implement and to initiate ideas for national reforms following the dissolution of the National Reform Council (NRC).

Note: The National Reform Council (NRC) is for undertaking a comprehensive reform of the country and drawing up recommendations for the Constitution Drafting Committee.

The Constitution Drafting Committee (CDC), which consists of legal experts, academics, former senators, judges, civil servants, representatives from NGOs and the media, is nominated to ensure a truly democratic constitutional monarchy.
NCPO’s roadmap to reform Thailand in Stage 2

The National Council for Peace and Order (NCPO) proposed three stages of national administration during the transition period.

Coup on 22 May 2014

Stage One
Bring back normal operations of civil service
May 2014
- Executed national security and law enforcement.
- Cleared illegal weapons.
- Appointed and transferred critical officers.

June 2014
- Developed economic master plans.
- Set up Reconciliation & Reform Center.
- Enforced narcotic suppression.
- Reviewed 56 SOEs’ governance structure.

July 2014
- Launched the 19th interim constitution of Thailand.
- Drafted the 2015 Annual Budget Bill of THB 2.6 trillion.

Stage Two
Create an environment contributes to national reforms with NLA and NRC in action.
Aug - Oct 2014
- Established the National Legislative Assembly (NLA) to perform the parliament roles.
- Approved the 2015 Annual Budget Bill.
- Appointed the Interim Prime Minister and form an Interim Government.
- Operated government new fiscal year.
- Appointed and transferred key civil & military officers.
- Established the National Reform Council (NRC) to study and provide recommendations for Thailand reforms.

Sources: compiled from NCPO, the Royal Thai Government, & Thai Local Newspapers
Stage Two - Continued

Create an environment contributes to national reforms with NLA and NRC in action.

Oct 2014 - Sep 2015

- NLA successfully impeached the former Prime Minister Yingluck Shinawatra over the rice-pledging scheme.
- NRC proposed reform frameworks and appoints Constitution Drafting Committee (CDC) to drafts the 20th Constitution of Thailand.
- NRC rejected the draft of the 20th Constitution of Thailand by 135 votes against 105 in favour with 7 abstentions, and in turn, was dissolved on September 6, 2015.
- NPCO proposed the 20-month period of the new political roadmap known as the 6-4-6-4 formula, which leads to a new civil government in July 2017.

Create an environment contributes to national reforms with NLA and NRSA in action.

Oct 2015 – Feb 2017 (Approximately)

- Appointed a new 21-person Constitutional Drafting Committee to propose the new draft of 20th Constitution of Thailand within 180 days.
- Established the National Reform Steering Assembly (NRSA) consisting of 200 members to implement the national reform blueprint proposed by the dissolved NRC.
- Conduct a nationwide referendum of the drafted 20th Constitution of Thailand (expected date August 7, 2016)
- Launch the 20th Constitution of Thailand.
- Draft and deliberate the organic laws of the 20th Constitution of Thailand.

Stage Three

An election will be held to restore full democracy.

Mar 2017 onwards (Approximately)

- Execute general elections – the Senate and the House of Representatives.
- Parliament in action.
- Form a new government.
- Continue Thailand’s reform initiatives.

Sources: compiled from NCPO, the Royal Thai Government, ThaiPBS, & Thai Local Newspapers (The Nation, Bangkok Post)
The Interim Government to perform public administration

The Interim Government established under Thailand’s Interim Constitution 2014

The Interim Government consists of the Prime Minister (General Prayuth Chan-Ocha) and 34 other ministers appointed by the King to perform public administration.

Government Priorities
- Accelerating Thai economic growth
- Agricultural reform
- Anti-human trafficking
- Energy and environment sustainability
- Social affairs
- Thailand and the world

Highlights
- The Royal Decree B.E. 2558 (2015) on the Amendment of the Air Navigation Act B.E. 2497 (1954) and the Royal Decree B.E. 2558 (2015) on Thailand’s Civil Aviation have been enacted to comply with the Standards of the International Civil Aviation Organization (ICAO). The Civil Aviation Authority of Thailand (CAAT) has been established with a particular purpose of regulating civil aviation.
- Several transportation infrastructure projects are on the ways to promote connectivity to make Thailand as a regional hub and in line with the ASEAN connectivity platform: for examples:
  - Three motorway projects – Pattaya – Map Ta Phut, Bang Pa-In – Nakhon Ratchasima, and Bang Yai – Kanchanaburi;
  - Air and sea transport – the rail freight centre at Laem Chabang seaport, U-Tapao Airport as the third commercial airport, the 2nd phase of Suvarnabhumi International Airport and;
- Establishing the Administrative Committee for ASEAN Community Preparation and the 5-year strategies and action plans to drive 3 pillars of the AEC.

Sources: The Royal Thai Government, Thailand Interim Constitution 2014, National New Bureau of Thailand & Thai local newspapers (The Nation & Bangkok Post)
The National Legislative Assembly (NLA) to take the Parliament duties

NLA established under Thailand’s Interim Constitution 2014

NLA consists of 220 members appointed by the King in accordance with NCPO’s recommendation.

**NLA’s Key Duties**

- Priority role is to act as the House of Representatives, the Senate, and the National Assembly during the transition period.

- NLA has the power to:
  - Issue the rule on election and perform duties of the NLA President, the NLA Vice-Presidents, and its Committees and meetings.
  - Introduction and deliberation of Bills and Organic Law Bills (i.e. Constitution Related Bills).
  - Monitor and control the Interim Government by making the submission of motions, discussion, making resolutions, and interpellation.
  - Peace keeping and other related matters for the performance of its duties.

**Highlights**

- Accepted in principle the legislation on public referendum and formed a 21-member committee to review the legislation and to make adjustments if necessary within the next 20 days. The second and third sittings of the legislature was held on April 7, 2016. The referendum on the draft charter is expected to take place on August 7, 2016.

- Passed the new Mining Bill by 148 votes against one opposition. The Bill, in essence, empowers the state to manage mining operations for utmost benefits to the country and its people by taking into consideration economic and social development and environmental and health impacts.

- Reconsidered legislation on trying human trafficking cases to ensure that all of its language is accurate and complete.

- The NLA President expressed his support for the proposal, which suggests that Thailand’s senators should be selected during the political transition. He added that, according to the theory, senators should be in office to work with the House of Representatives in such a way that keeps everything in balance while solving all related problems.

Sources: Compiled from The Royal Thai Government, Thailand Interim Constitution 2014, National New Bureau of Thailand & Thai local newspapers (The Nation, Bangkok Post)
The National Reform Steering Assembly (NRSA) to implement the national reform blueprints

NRSA established under Thailand’s Interim Constitution 2014

NRSA consists of 200 members appointed by the King in accordance with NCPO’s recommendation.

NRSA’s Key Duties

- Implement the national reform blueprints proposed by the dissolved National Reform Council (NRC).
- Give advices and recommendations to the Constitution Drafting Committee (CDC) for the purpose of Constitution drafting.

Highlights

- Approved 12 reform agendas to be written into the new constitution and pursued within a one year time frame. All agendas received unanimous approval from 143 votes, and will be further submitted to the Cabinet for further action, as the reform process may require legal enactment which must be proposed to the NLA within one year.
- Approved a report from the economic committee, which recommend three major reforms including (1) reform of the structure of the third sector, (2) elevating the efficiency of a mechanism that will tackle all social problems and (3) developing the investment market to benefit society.
- CDC President addressed that the new constitution aims to solve country’s problems and conflicts caused by four factors (i.e. injustice in society, sustained corruption, indiscipline and lack of law enforcement), but also stimulate the public participation in politics by creating a new election mechanism which clearly defines qualifications and prohibitions.

Sources: Compiled from The Royal Thai Government, Thailand Interim Constitution 2014, National New Bureau of Thailand & Thai local newspapers (The Nation, Bangkok Post)
Industry Sector Updates
Thailand key industries are expected to continue their moderate growth path in 2016.

Sources: Compiled from various research houses & agencies (e.g. IMF, ADB, EIU, NESDB, K-Research, SCB EIC, FTI) & DTTJ Analysis.
Thai automotive industry in 2016 is expected to grow 5% buttressed by export growth, while domestic market remains in a negative growth mode due to domestic unfavourable factors. Over the long-term, Thailand automotive industry is forecasted to have an upward moderate growth path.

**Situation in 2015**

Thai automotive industry in 2015 benefited from export growth, while domestic market contracted since 2013. Total car production was 1.91 million units or grew by 2% compared to 2014's. Car export reached 1.2 million units or increased 7% YoY. However, domestic sales during 2015 was 0.8 million units or 9% lower than 0.9 million units sold in 2014 due to the impact of economic slowdown, lower commodity prices, and high level of household debt.

**Outlook 2016**

Car production is projected at 2.0 million units, growing 5% from 2015. Of which, 65% of production is for export and 35% for domestic sales. Domestic car sales is forecasted at 0.72 million units or contracts 10% YoY due to the slowdown of domestic demand, whilst car export is likely to maintain the growth rate at 7% YoY thanks to growing demands in major export markets.

**Long-term trend**

As Thailand represents a regional strategic location for production along with the BOI’s eco-car incentive scheme and mega-project investment to enhance Thailand’s competitiveness, major car producers will continue to deploy their production and supply chain capacity to great effects. As analysts expect that overall global economy will gradually capture an upward growth trend in the coming years, Thailand’s car industry is projected to grow 4% in years after.

Sources: BOI, EIU, OIE, Somboon Advance Technology (SAT), & Thailand Automotive Institute.
Overall, global car production in 2015 was 90.7 million units or grew 1% YoY. The slow growth of car production was largely affected by global economic slowdown.

Top five countries including China, Japan, USA, Germany, and South Korea produced 62% of global car output in 2015.

From 2016-2019, analysts have forecasted that global car production is likely to gain CAGR at 6%.

Sources: EIU & OICA.
Overall, a diminishing growth of global car industry is expected in 2016 due to the slowdown of both advanced and developing economies as well as prolonged geo-political tensions.

**World car production growth 2010-2015**

- Global car production in 2015 was 90.7 million units growing 1.0% YoY. Africa gained the highest growth at 16%, while the growth of Asia-Oceania, Europe, and America were moderate at 1%, 3%, and -1% respectively.
- Global car sales in 2015 was 89.7 million units raising 2% YoY. Asia-Oceania gained the highest growth at 3% YoY, while the growth of Africa, America, and Europe were recorded at -9%, 0.4%, and 2% respectively.

**World car sales growth 2010-2015**
Thailand is expected to maintain ASEAN’s automotive industry leader in the coming years buttressed by an established solid supply chain and a large pool of skilled labours.

For Thailand, the volume of car production in 2015 was revised to 1.9 million units or 49.1% of total ASEAN car production.

Overall, ASEAN car industry in 2015 was contracted 2% compared to 2014s’ partly due to the reduction of car demand in both the global and regional market.

During 2016, Thailand is expected to produce 2.0 million cars growing 5% from 2015. Domestic sales was forecasted at 0.7 million units accounting for 35%, while export was projected at 65% or 1.3 million units.

Despite the slowdown of both global and domestic car demands, automotive players in Thailand can outperform other regions as a result of an established solid supply chains and a large pool of skilled labours in Thailand.

Domestic car sales in 2015 contracted 9% compared to 2014s’ due to several adverse domestic factors.

**Update Thailand Car Market 2015**

- The total number of domestic cars sales during 2015 was 0.8 million units, decreasing 9% from 2014.
- Japanese car manufacturers have faced three consecutive difficult years in the Thailand car market. However, Honda, Mazda, and Suzuki achieved positive growth at 5%, 15%, and 5% respectively. Several car manufacturers attempted to capture emerging and untapped demands in ASEAN countries.
- Adverse domestic and external factors including high household debt level, low agricultural commodity prices, drought, slow public and private investment disbursement, and international trade contraction, affected Thai economy and consumers’ purchasing power and, thus, caused a contraction of domestic car sales during 2015.

Sources: FTI & Toyota (Thailand) Co. Ltd.
Finance & Banking

Finance & banking sector is forecasted to grow 6% in 2016 mainly driven by accommodative monetary policy and expansionary fiscal policy.

Situation in 2015
As a result of domestic and global economic slowdown affected by various adverse factors (e.g. lower commodity prices, high level of household debt, geo-political conflicts), loan outstanding in the banking system finished at 13.2 trillion Baht, growing 3% from 2014.

Outlook 2016
Overall, Thailand loan outstanding is forecasted at 14.0 trillion Baht or grow 6%YoY. NPL proportion is expected to reduce from 2.6% in 2015 to 2.5% in 2016 or increase 3%YoY due to strict credit granting criteria. The high level of household debt and lower commodity prices as well as severe drought caused by El Nino will affect consumer loan demands. Overall during 2016, loan demands are expected to stem from an accommodative monetary and public infrastructure investment.

Long-term trend
Financial institutions will be posting loan growth around 7-8%YoY over the next few years the despite facing both external and domestic downside risks. In addition, Thai Government will continue to pursue both short-term and long-term economic stimulus schemes (e.g. SME incentives, transportation infrastructure investments), which will stimulate both Bangkok and upcountry economic expansion, boost loan demands across Thailand, and also, provoke capital markets to raise investment funds.

Sources: EIU, K-Research, & SCB EIC
Thailand’s total loans in 2016 is forecasted to reach 13.0 trillion Baht, increasing 6% YoY.

The growth of Thailand’s total loan outstanding is expected to accelerate from 3% in 2015 to 6% in 2016. Business loan growth for both corporate and SME segment will be driven largely by public infrastructure investment, which also stimulates private investment. Likewise, overall consumer loan segment will continue to its growth momentum around 6-7% thanks to consumption demands and marketing campaigns. NPL proportion in 2016 is forecasted to reduce to 2.5% compared to 2.6% in 2015 as a result of cautious credit approval and improved investment conditions. In addition, analysts have viewed that financial technology (FinTech) in several formats will significantly affect competition, regulatory framework and governance of banks and financial institutions in Thailand in the coming years.

Thailand’s total loan in 2016 is expected to grow 6% from 2015.

Food & Beverage

Food and beverage production during 2015 were contracted by 1.2% and 0.6% respectively. In 2016, both production and consumption is expected to rebound driven partly by the removal of trade barriers and higher demands for Thai foods in overseas markets.

Situation in 2015
Food production volume was at 31.0 million tons dropped 1.2% from 2014, while export value grew 927.4 billion Baht or improved 1.5%YoY due to raising demand from key export markets. For key beverages, total production was contracted by 0.6%YoY mainly due to a slowdown of domestic demand.

Outlook 2016
Food and beverage production growth are forecasted at 3% and 2%YoY respectively. Major growth drivers include higher public and private consumption as well as favourable trade conditions for Thai food and beverage products. However, lower purchasing power of Thailand’s household sector as a result of lower commodity prices and severe drought to some extent affects the sales volume of food and beverage.

Long-term trend
A positive outlook for food production and export is anticipated in the coming years as a result of demand recovery and the removal of trade barriers in the key export markets, especially the AEC market. In beverage segment, long-term growth momentum is expected for both alcohol and non-alcohol segment the rebound of domestic demands over the coming years.

Food

The situation of Thailand’s food industry in 2016 is expected to moderately improve from 2015s‘ amid domestic and global unfavourable factors.

- In 2015, food production volume was contracted by 1.2% due to several adverse factors. Total production volume in 2016 is forecasted at 32.0 million tons growing 2.5%YoY.
- In 2015, domestic food sales reached 18.3 million tons raising 2.9%YoY. For 2016, total sales volume is forecasted at 18.7 million tons or grow by 2% compared to 2015s’.

Sources: BOT, OIE, & DTTJ Analysis (Data as of February 2016)

* Note: Production and consumption volume have been revised by Office of Industrial Economics startin from 2013.

Thailand’s food export in 2015 was affected by both tepid global economic recovery and non-tariff barriers. In 2016, several key drivers are likely to underpin Thailand’s food export position amid existing unfavourable factors.

- Thailand’s food export during 2015 was contracted by 1.2% compared to 2014s’ due to slow global economic recovery, low agricultural commodity prices, and non-tariff barriers (e.g. illegal fishery, GSP cutting, human trafficking) adopted by USA and EU.
- In 2016, a moderate rebound of Thailand’s food export around 1.5-2% is expected thanks to increasing demands from major export markets and SME financial support scheme by Thai government.
- Similarly, Thailand’s food import is forecasted to grow 3% from 2015 in line with Thailand GDP growth forecast.
- In addition, Thailand’s key players in food industry are proactive to expand their footprints in overseas markets. Recently, Thai Union Group, the world largest tuna producer, has acquired Rügen Fisch AG to strengthen its competitive position in Europe.

Sources: BOT, OIE & DTTJ Estimate (Data as of February 2016)
Beverage

Thailand’s beverage production was contracted at 0.6% in 2015 affected by sluggish domestic consumption, but expected to grow 2% in 2016 driven by both private and public consumption.

- In 2015, total key beverage output volume was 6.5 billion litres contracted 0.6% YoY thanks to sluggish domestic consumption.
- Growth of the beer market is likely to be modest in the coming years due to slowdown domestic consumption and market saturation.
- Competition among major beer producers continues to intensify. The local Boonrawd Brewery is expected to maintain its leadership in sales by volume. Likewise, ThaiBev, a leading producer of beer and spirit, continues to perform well and aggressively expands its business towards ASEAN market.

Key Beverage Production Volume

CAGR 2011 – 2016F = 3.3%

Sources: EIU, OIE, & DTTJ Estimates
Note: data as of February 2016
Energy: Electricity

An expansion of domestic economic activities sustains the growth momentum of the demand for electricity during 2016. Natural gas remains the major source of electricity generation in the coming years. Alternative sources such as renewable energy, coal, and nuclear power will help secure Thailand’s power supply from the rising demand in the future as planned in PDP2015.

**Situation in 2015**

Electricity consumption grew by 3.4% YoY despite the presence of domestic economic slowdown. The country’s gross energy generation and purchase was shifted from 172.0 billion kilowatt-hours (kWh) in 2014 to 177.8 billion kWh in 2015.

**Outlook 2016**

Demand for electric power is likely to maintain its growth momentum as a result of the expansion of both public and private investment as well as the burgeoning of tourism industry. The total net energy demands, then, are predicted to grow approximately 3.5% from 2015.

**Long-term trend**

Thailand’s electricity consumption is forecasted to rise by an average of 3.0% in the coming years in response to Thailand’s real GDP growth projection. Natural gas will remain the dominant fuel for power. Nevertheless, the approved Thailand’s new Power Development Plan 2015 (PDP2015) will ensure that various sources of power such as renewable energy, clean coal and nuclear power will be used to secure Thailand’s power supply from the rising demand in the future.

Sources: BOT, EGAT, & Ministry of Energy (EPPO & DEDE)
The electricity generating proportion of private power plans reaches 58.8% in January 2016 and combined cycle represents more than 60% of total electricity generating capacity.

**Total Electricity Generating Capacity: 39,756 MW**

- **EGAT’s Capacity**
  - Thermal: 9.2%
  - Combined Cycle: 23.2%
  - Hydropower: 8.8%
  - Diesel: 0.1%
  - Renewable Energy: 0.01%

- **Private Power Plants 41.2%**

- **EGAT’s Power Plants 58.8%**

**Types of Producers**
- IPP: 37.1%
- SPP: 13.1%
- Neighboring Countries: 8.5%

**Sources:** EGAT & Electricity Generating Company Websites

**Note:**
1. Thai government has privatized electricity generating industry
2. data as of January 2016
3. MW = megawatt. 1 MW = 1 million watts

**Comparisons of electricity generating capacity – January 2015 vs. January 2016**

**Thailand’s Electricity Generating Capacity (Jan 2015 vs 2016)**

- **EGAT vs Private Capacity (Jan 2015)**
  - Thermal: 12.2%
  - Combined Cycle: 37.5%
  - Hydropower: 5.3%
  - Renewable Energy: 3.1%
  - Thailand-Malaysia HVDC: 0.8%

**Sources:** BOT, EGAT, Ministry of Energy, & DTTJ Estimate.

**Note:** kw hour = kilo-watt hour.

The majority of electricity consumption in Thailand stems from both large-scale business and household sector with an average long-term growth rate of 3.0%.

- The rate of electricity consumption is expected to rise approximately 3.5% in line with real GDP growth prediction in 2016.
- Large-scale business is the largest electricity user, followed by household sector (accounted for 40% and 23% of total electricity consumption respectively).
- Fossil fuels remain the main source for power generation despite the promotion of renewable energy utilization in the coming years. Its share of the total is forecasted at around 70% from 2015 – 2020.

According to PDP2015, Thailand total electricity, the generating capacity in 2036 will be around 70,335 MW with the net capacity increase of 32,723 MW from 2014.

Alternative Energy Development Plan 2015-2036 (ADEP2015) targets on increasing the share of renewable energy uses by 30% within 2036 resulting in replacement of conventional fossil-fuel power plants by renewable ones.

Energy Efficiency Plan 2015-2036 (EEP2015) aims to achieve 30% reduction of energy intensity (i.e. energy consumption/GDP) as a part of energy saving and efficiency programs.

Note: MW = megawatt. 1 MW = 1 million watts
Telecommunications

From 2016 onwards Major mobile operators concentrate on 4G services and expand their network coverage to take advantages from their investments, but also to meet NBTC’s requirements. Non-voice services will continue to generate a larger proportion of industry revenue in the coming years.

Situation in 2015
After the NBTC has deactivated the unregistered-SIMs, the total number of registered mobile connections at the 2015 year end were 83.0 million or declined 13.3%YoY. Of these, 68.7 million users or 82.7% are on pre-paid plans. The number of post-paid plans, by contrast, reached 14.3 million users or grow 11.4% compared to 2014’s. Likewise, the penetration rate dropped to 123.5% at the end of 2015. TRUE and AIS have secured NBTC’s new licenses while DTAC has strategized to deploy its existing 850-1,800- and 2,100-MHz spectrum in the most efficient ways.

Outlook 2016
Competition among major mobile operators concentrates on 4G services. A considerable investment in infrastructure and network is expected with regard to NBTC’s license conditions. There will be marginal changes of market share (e.g. subscribers, revenue) among major players mainly affected by marketing campaigns and network coverage.

Long-term trend
Future government policy on ICT will be in favour of all mobile operators as the interim government has committed to promote the Digital Economy in its agenda. A variety of newly integrated services especially financial service applications and alliances between mobile operators and business counter parties including banks, non-banks, retailers, and so on will play essential roles in driving the growth of telecommunication industry.

Sources: EIU, NBTC, & Ministry of Information and Communication Technology (MICT)
Mobile business gradually recover from 2016 onwards after a bulk of pre-paid sim cards were deactivated. Internet and broadband services continue their long-term growth momentum.

- According to NBTC’s SIM Card registration scheme in response to the threat of terror attack, total mobile subscriptions and penetration rate in 2015 are contracted to 85.4 million and 126.6% respectively. From 2016 onwards, both subscriptions and penetration rate are forecasted to gradually rebound.

- Digital Economy Agenda by Thai Government will drive Internet and broadband service demands across various sectors in the coming years. Aggressive marketing campaigns for broadband services are under way and competition to extend the customer-base has intensified.

Sources: EIU, NBTC, & Ministry of Information and Communication Technology (MICT)
The majority of demand is dominated by pre-paid services, which expectedly continue through the medium term. As a bulk of unregistered SIMs (all on pre-paid plans) have been deactivated and led to a fall in subscriber numbers. According to the NBTC, the total number of registered mobile connections at the 2015 year end stood at 83.0 million or declined 13.3%YoY. Of these, 68.7 million users or 82.7% are on pre-paid plans. The number of post-paid plans, by contrast, reached 14.3 million users or grow 11.4% compared to 2014s’. This displays a low but growing appetite for longer term contracts.

Not only lower service prices but also new aggressive market promotions in non-voice services such as higher-speed service (i.e. 4G) and low-end as well as mid-range smartphones will be focused to gain more market share in the future.

Competition among three major operators concentrates on 4G services. An increasing use of the Internet on smartphones and other mobile devices forces these operators to provide more innovative technologies and advanced services.

**AIS**
- AWN a subsidiary of AIS Group officially launched 4G services with a service area starting from 42 provinces in every region nationwide. It offered full-speed packages and a wide range of 4G service centers (Jan 2016).
- On November 13th, the first auction, of 1,800-MHz spectrum, was completed, with the winning of AIS for a price of 40.99 billion Baht (Nov 2015).
- AIS upgraded “AIS mPAY” to “Digital Money for Everyone”. mPAY offers complete mobile payment convenience on mobile phones, upgrading into the most popular app in the field of finance (Sep 2015).

**DTAC**
- Invest 70 billion Baht in network expansion and marketing campaigns for its Super 4G Network and Super 4G offerings, which allows customers to enjoy 3 times faster Internet, together with DTAC’s customer confidence boosting campaign (Feb 2016).
- Aim to become the leading mobile internet provider, and to expand 4G service on 1800MHz to support the soaring growth of mobile internet demand. In addition, it has invested 500 million Baht on “DTAC Network Analytics Solution” as an innovative trend to analyze consumer behavior (Sep 2015).

**TRUE**
- TRUE and JAS were the winners of 900 MHz spectrum licence by quoting 76.3 and 75.7 billion Baht respectively. Hence, True has the highest total bandwidth under NBTC licences - 15MHz of 2.1-GHz spectrum, 15MHz of 1800-MHz spectrum and 10MHz of 900-MHz spectrum. (Dec 2015). However, JAS missed the deadline for paying for 900-MHz spectrum license it won. (Mar 2016).
- On November 13th, the first auction, of 1,800-MHz spectrum, was completed, with the winning of AIS for a price of 39.79 billion Baht (Nov 2015).
