

# Why is a Cloud based smart factory transformation imperative to driving bottom-line growth?

Smart factory transformations allow you to address daily production execution inefficiencies and to drive increased value, both within and beyond the four walls of the factory.

## Characteristics of a smart factory

- Connected
- Optimised
- Transparent
- Proactive
- Agile

## A smart factory...

- Leverages intelligent data** to resolve the right business issue
- Combines new technologies such as AI/ML** to predict failures
- Streamlines your operations** by enhancing workforce collaboration
- Collects, connects, and analyses** production data to drive insight
- Augments human intelligence** with machine intelligence
- Drives better insights** and sustained step change improvements in performance, quality, and safety

**Why now?** Now more than ever, organisations need to do more with less; either scale up rapidly to match increasing demand or maintain capacity while reducing footprint. Data availability, compute, and store capabilities are more accessible than ever. We can now create visibility to proactively address inefficiencies in the “hidden factories” and day to day operations.

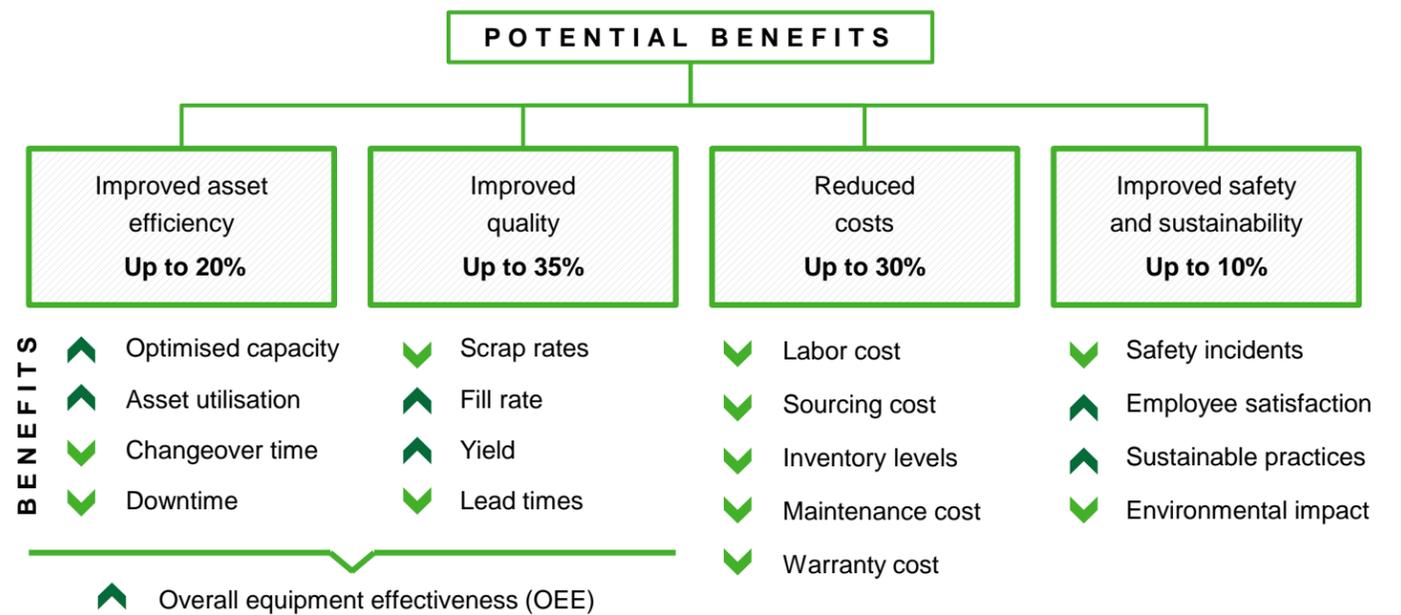

### Typical brown field manufacturing issues...

- ⚠ A workstation **unexpectedly failed** and is offline waiting for maintenance repair
- ⚠ A line has been continuously reporting 10% **quality rejection** in the last week of production
- ⚠ WIP inventory pile up at one workstation as another is **waiting for materials** to continue operation
- ⚠ A technician did not report for work, **causing a gap on the line** for a critical skillset

### ...can be addressed in new ways.

- 🔧 **Predict** machine downtime by analysing performance trends
- 🕒 **Sense** quality degradation and immediately enact correction efforts
- 📊 Track material movements in **real time** and **dynamically schedule** production cycles based on resource availability
- 👤 Actively manage the workforce and **track worker performance** data

**What are the expected outcomes?** Smart factory transformations, when done at the plant or enterprise level, can deliver significant cost savings, improved product quality, and increased employee and customer satisfaction.

# Accelerating your smart factory journey: Smart Factory Fabric on Amazon Web Services (AWS)

Smart Factory Fabric is a **pre-configured** suite of cloud-based Internet of Things (IoT) applications built on AWS designed to accelerate smart factory transformations across the enterprise, customisable to meet your unique needs, and resolve the right business issues.

## The Smart Factory Fabric platform includes:

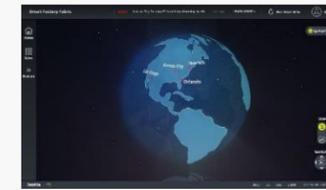

- 1 Proven technology with a scalable cloud-based and IoT-enabled architecture
- 2 Integrated use cases addressing the most common factory challenges
- 3 ROI-driven deployment approach
- 4 Focus on user adoption and enterprise transformation

## Use cases \*

	<b>COMMAND CENTER</b> Bird's eye view of all factory operations and plant performance, prioritising critical needs and allowing for enterprise analysis	 5-10% Improved ROI CapEx Decisions	 3-5% Increased Factory Utilisation	 15-20% Reduced Manual Overhead
	<b>MACHINE MONITORING</b> Connect to and view machine status, KPIs, and critical performance data	 7-10% Reduced Machine Downtime	 5-8% Reduced Material Span	 10-15% Reduced Changeover Time
	<b>MATERIAL TRACKING AND VISIBILITY</b> Track location material movements in real time to improve efficiency and visibility	 7-10% Reduced Machine Downtime	 5-8% Reduced Material Span	 10-15% Reduced Changeover Time
	<b>PREDICTIVE MAINTENANCE</b> Capturing real-time and historical machine health data over its lifecycle to diagnose specific issues before it causes downtime in production	 15-20% Reduced Scrap And Rework	 8-12% Increased Machine Uptime	 10-20% Reduced Maintenance Labor Costs

\* Estimated benefits for use cases are based on Deloitte's experience

## Solution preview

Manage at the plant level

View enterprise performance

Address the man, machine, and material constraints that hinder performance

### Built for the enterprise with a proven architecture:

modular, scalable and anchored on AWS; secure by design and ready to complement your existing IT landscape.

### Targeted Personas:

Addressing executive, plant manager, and shop floor technician needs.

### Highly Integrated:

Start with 1 or multiple use cases. The solution is built for easy expansion.

### How the AWS services are leveraged:

AWS IoT Greengrass extends AWS to edge devices so they can act locally on the data they generate, while still using the cloud for management, analytics, and durable storage.

AWS IoT Things Graph makes it easy to visually connect different assets and web services to build IoT applications through reusable models.

... and there are many others

	<b>ADVANCED WORKER SOLUTIONS</b> Advanced analytics for optimal manning and traceability of workers, dynamic crew planning and work allocation	 10-20% Labor Cost Reduction	 15-25% Operational span increase	
	<b>DYNAMIC PRODUCTION SCHEDULING</b> Dynamically schedule production cycles based on resource availability and requirement	 5-10% Increased Throughput	 15-20% Reduced Inventory (Material Utilisation)	 5-10% Reduced Resolution Span
	<b>QUALITY SENSING AND PREDICTION</b> Identify potential quality issues faster and earlier in the value chain	 5-8% Reduced Scrap and Rework	 20-30% Increased Early Identification	 10-15% Reduced Resolution Span
	<b>AND MORE...</b> Deloitte and AWS will continue to invest in building new pre-configured accelerators addressing the wider market			

The Smart Factory Fabric on AWS accelerator brings together leading providers in the industry, each with highly complementary services.

## The offering is:

**More than technology:** Preconfigured accelerators, process change centric, human-centric design user adoption obsessed

**ROI Driven:** Simple, highly effective user experiences constantly tuned to help drive ROI

**Native AWS stack:** Potential lower costs, greater scalability and security, and higher availability—at lower risk

**Secure by design:** Security is built into our solution and is a focus of everything we do from sensor to cloud

**Flexible and adaptable:** Open and extensible platform with the flexibility to use third-party offerings
