Deloitte has been independently recognised as a market leader in managed security services by IDC MarketScape.

Deloitte offers a range of managed cyber services, from basic MSS to some advanced detection capabilities, and tailors its offerings from a risk perspective. The company continues to strengthen its offerings with investments in research and development and growth.

An ever changing threat

The cyber landscape is always changing. Advancements like robotics, IoT, and artificial intelligence, although positive, can mean greater cyber threats for organisations. Cyber threats can't always be detected by conventional cyber protection methods, and whilst these conventional methods do offer some protection, organisations must proactively develop their cyber capability to stay ahead of the threat landscape.

What risks are you taking?

If your organisation works online, you are at risk. Cyber threats can strike at any time and can impact organisations of any size, based anywhere in the world. Although the upfront costs of advanced cyber security can seem overwhelming, the impacts of a cyber attack are far more serious. Not only are you at risk of financial damage through loss of service or remediation action, you also risk reputational damage from your clients, especially since the introduction of GDPR. This types of damage can in some cases be irreparable.

What can you do to protect your organisation?

Deloitte believe that preparation and continuous monitoring are the best ways to maintain network security. We know that developing and maintaining an in-house internal monitoring capability to undertake this task can be time and resource intensive. That's where Deloitte can help. Our skilled Cyber Threat Intelligence team work with you to define your most at risk areas, develop tools, techniques, and work to understand your sector's landscape to identify trends and threats which pose a risk to your organisation.
Deloitte’s Cyber Threat Intelligence (CTI) is an essential weapon for detecting and preventing targeted attacks. CTI provides actionable intelligence that identifies attackers and translates cyber threats into business risks, using terms that are meaningful to non-technical executives. You can then use this intelligence to manage your risk profile and build strategies alongside these executives.

Deloitte CTI widens your threat gathering capability. Our specialist analysts look at online forums, and open source, indicator, human, and global intelligence sharing platforms. They then extract the information that is relevant to you, and present the information in a way that can be used to combat threats and manage risks.

Our CTI teams, operating from Cyber Intelligence Centres all over the world, will work with you from a tactical through to a strategic level to ensure all of your cyber risk goals are met.

Contacting our Cyber Threat Intelligence team is just the first step in your cyber journey. Deloitte Cyber Threat Intelligence can be combined with any of our other managed services to further protect your most valuable assets. CTI combined with our Threat Monitoring service detects threats to your business whether they’re on or off of your network, whilst our intelligence-led Vulnerability Management, Privileged Access Management, and Managed Information Protection services serve to assist you in increasing your security posture by taking over the management of core platforms. If an incident does occur, our Cyber Incident Response teams are here to get you back to business as quickly as possible.

Our highly-skilled teams combine market-leading technology with Deloitte’s experience and knowledge of cyber security and broader risk to provide context-rich analysis to our customers.
