Deloitte has been independently recognised as a market leader and award winner in managed security services by IDC MarketScape.

Deloitte offers a range of managed cyber services, from basic MSS to some advanced detection capabilities, and tailors its offerings from a risk perspective. The company continues to strengthen its offerings with investments in research and development and growth.

An ever changing threat

The cyber landscape is always changing, yet 80% of internal threats are caused by employee negligence. Advancements like robotics, IoT, and artificial intelligence, although positive, can mean greater cyber threats for organisations. Whilst conventional cyber methods do offer some protection, organisations must proactively develop their cyber capability, access management systems, and staff awareness to stay ahead of the threat landscape.

What risks are you taking?

One of the biggest security risks in the cyber landscape is the potential misuse of privileged accounts. These privileged accounts are constantly targeted by malicious actors as they look to infiltrate valuable information or cause damage to an organisation. The protection and management of these accounts is therefore key to securing client information and protecting brand reputation. Deloitte’s Privileged Access Management (PAM) team helps organisations manage their privileged accounts in order to protect their critical assets, meet compliance regulations, and prevent data breaches.

What can you do to protect your organisation?

Deloitte believe that preparation and constant monitoring are the best ways to secure privileged accounts. We know that developing and maintaining an in-house Security Operations Centre (SOC) to undertake this task can be too time and resource intensive. That is where Deloitte can help. Our skilled Privileged Access Management team work with you to define your PAM strategy, solutions, and approach to help you protect and monitor your privileged accounts, as well as detecting, alerting, and responding to privileged account threats.
What's different about Deloitte?

Deloitte’s Privileged Access Management (PAM) service helps you stay in control of your most valuable assets. Our PAM team becomes an extension of your existing security team – as specialist resources. You sign an agreement with the PAM vendor and our PAM team liaise with that vendor (for any issues that need vendor support) via a client email address assigned to them. Combining your existing tools and Deloitte’s leading technology, our specialist PAM team works with you to:

**Privileged Account Discovery**
Identify privileged accounts across your network, which assets they can access, and which of these are most critical to your business. Once we know that, we can secure, isolate, control, manage, and monitor these privileged accounts and sessions.

**Solution Design and Configuration**
Provide the expertise to configure and customise the solution to support your business needs. We can install and configure your Privileged Access Management solution to enforce least privilege policies and secure privileged accounts.

**Solution Administration**
Administer the privileged accounts when new systems/users are implemented, manage the life cycle of privileged accounts, and develop password policies, safe management, and platform management.

**Patching and Release Management**
Manage the software and update the management life cycle of the solution including product releases and Windows patch management as recommended by the vendor.

**Auditing and Reporting**
Provide detailed auditing and reporting of account activity and user behavior integrating with your existing SIEM solution. Deloitte’s PAM service gives you an auditable trail of access around the clock meaning you’ll never be in the dark about activity taking place on your estate.

What’s the next step for you?

Contacting our Privileged Access Management team is just the first step in your cyber journey. You can combine this service with any of our other managed services to further protect your most valuable assets. Our Threat Monitoring and Cyber Threat Intelligence services detect threats to your business whether they’re on or off of your network, whilst our Vulnerability Management, and Managed Information Protection services serve to assist you in increasing your security posture by taking over the management of core platforms. If an incident does occur, our Cyber Incident Response teams are here to get you back to business as quickly as possible.

Our highly-skilled teams combine market-leading technology with Deloitte’s experience and knowledge of cyber security and broader risk to provide context-rich analysis to our customers.
