

Deloitte has been independently recognised as a market leader in managed security services by IDC MarketScape.

“

Deloitte offers a range of managed cyber services, from basic MSS to some advanced detection capabilities, and tailors its offerings from a risk perspective. The company continues to strengthen its offerings with investments in research and development and growth.

”

An ever changing threat

The cyber landscape is always changing. Advancements like robotics, IoT, and artificial intelligence, although positive, can mean greater cyber threats for organisations. Cyber threats can't always be detected by conventional cyber protection methods, and whilst these conventional methods do offer some protection, organisations must proactively develop their cyber capability to stay ahead of the threat landscape.

What risks are you taking?

If your organisation works online, you are at risk. Cyber threats can strike at any time and can impact organisations of any size, based anywhere in the world. Although the upfront costs of advanced cyber security can seem overwhelming, the impacts of a cyber attack are far more serious. Not only are you at risk of **financial** damage through loss of service or remediation action, you also risk **reputational** damage from your clients, especially since the introduction of GDPR. These types of damage can in some cases be irreparable.

What can you do to protect your organisation?

Deloitte, like many other organisations, believe that preparation and continuous monitoring are the best ways to maintain network security. We know that developing and maintaining an in-house internal monitoring capability (SOC) to undertake this task can be too time and resource heavy. That's where Deloitte can help. Our skilled Threat Monitoring team work with you to define your most at risk areas, develop tools, techniques, and strategies to monitor your estate, and work within your network on a constant basis to keep you always protected.

What's different about Deloitte?

At Deloitte, we don't believe in 'waiting for the worst to happen'. Deloitte's Threat Monitoring specialists deploy a lightweight collection infrastructure inside your estate, which proactively analyses all activity. We work with you to ensure our teams make use of your existing tools and provide you with the most comprehensive and up-to-date logs, unique to you. These logs are then analysed by our specialist teams using both market-leading tools and bespoke Deloitte systems. Once we have performed our analysis and filtered out irrelevant information, we provide you with remediation advice, and can act on your behalf to immediately contain high or critical severity incidents.

What's the next step for you?

Contacting our Threat Monitoring team is just the first step in your cyber journey. You can combine this service with any of our other managed services to further protect your most valuable assets. Our Threat Monitoring and Cyber Threat Intelligence services detect threats to your business whether they're on your network or off it, whilst our Vulnerability Management, Identity Access Management, and Managed Information Protection services serve to assist you in increasing your security posture by taking over the management of core platforms. If an incident does occur, our Cyber Incident Response teams are here to get you back to business as quickly as possible.

Our highly-skilled teams combine market-leading technology with Deloitte's experience and knowledge of cyber security and broader risk to provide context-rich analysis to our customers.
