

Deloitte. Vulnerability Management

Deloitte has been independently recognised as a market leader in managed security services by IDC MarketScape.

“

Deloitte offers a range of managed cyber services, from basic MSS to some advanced detection capabilities, and tailors its offerings from a risk perspective. The company continues to strengthen its offerings with investments in research and development and growth.

”

An ever changing threat

The cyber landscape is always changing. Advancements in robotics, IoT, and artificial intelligence, although positive, can mean greater cyber threats for organisations. Cyber threats can't always be detected by conventional cyber protection methods, and whilst these conventional methods do offer some protection, organisations must proactively develop their cyber capability to stay ahead of the threat landscape.

What risks are you taking?

If your organisation works online, you are at risk. Cyber threats can strike at any time and can impact organisations of any size, based anywhere in the world. Although the upfront costs of advanced cyber security can seem overwhelming, the impacts of a cyber attack are far more serious. Not only are you at risk of **financial** damage through loss of service or remediation action, you also risk **reputational** damage from the perspective of your clients. The impact of these risks increases significantly when considered alongside the potential fines that can be levied under GDPR as a result of a data breach.

What can you do to protect your organisation?

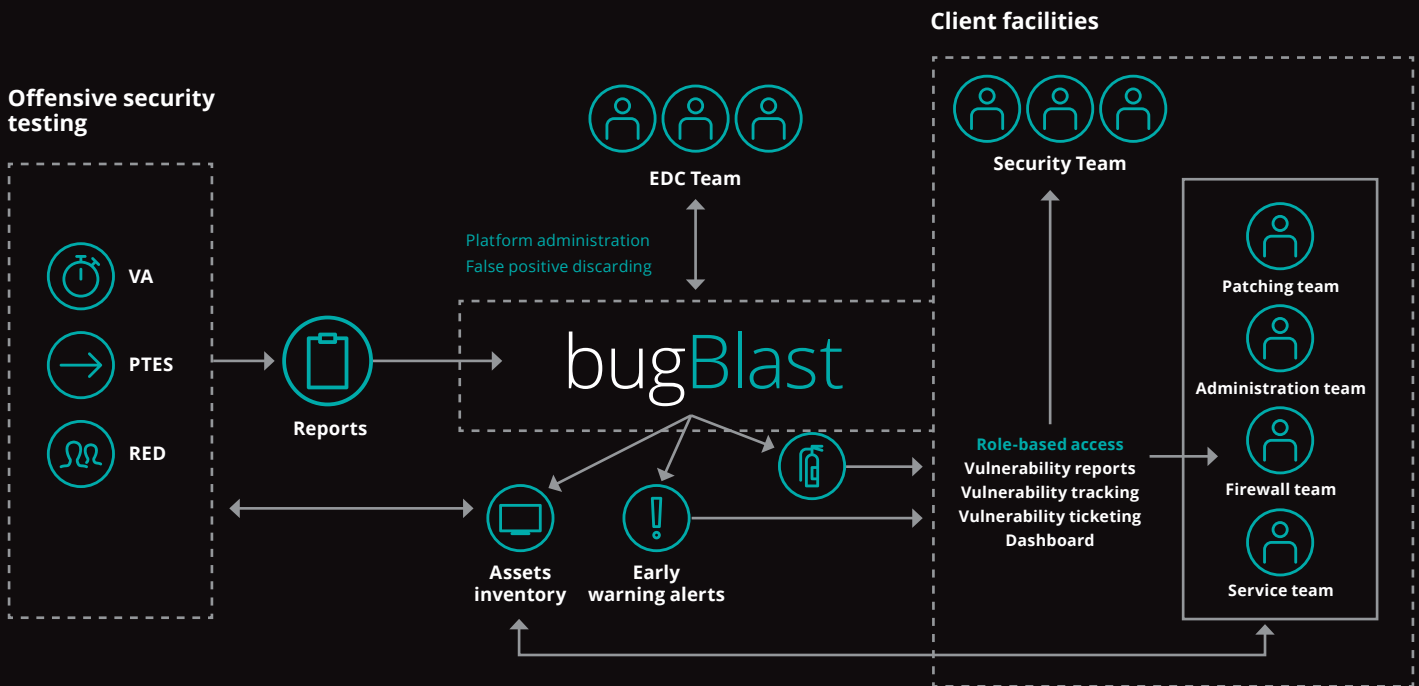

Deloitte believe that preparation and continuous monitoring are the best ways to maintain network security. We know that developing and maintaining an in-house internal monitoring capability (SOC) to undertake this task can be time and resource intensive. That is where Deloitte can help. Our skilled Vulnerability Management team work with you to define your most at risk areas, develop tools, techniques, and strategies to monitor your estate, and work within your network to keep you protected.

What's different about Deloitte?

Deloitte's Vulnerability Management service is a unique solution, designed to provide you with the tools and expertise you need to implement protection measures.

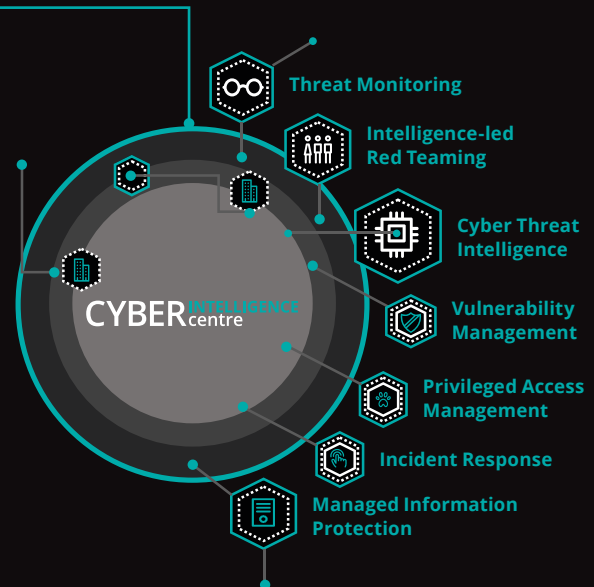

Our specialist teams work with your staff to draw a clear picture of how your estate is built. Once we have identified your assets and highlighted the most vital business critical assets, we analyse where you are most at risk from the perspective of an attacker seeking to penetrate your network. Leveraging our knowledge of the current threat landscape and latest exploits seen in the wild, we are able to provide you with actionable intelligence on which assets and vulnerabilities need to be patched as a priority. Remediation tracking can also be provided to help you meet your patching SLAs and ensure you are on track to securing your systems.

What's the next step for you?

Contacting our Vulnerability Management team is just the first step in your cyber journey. You can combine this service with any of our other managed services to further protect your most valuable assets. Our Threat Monitoring and Cyber Intelligence services detect threats to your business whether they're on or off of your network, whilst our Privileged Access Management, and Managed Information Protection services assist you in increasing your security posture by taking over the management of core platforms. If an incident does occur, our Cyber Incident Response teams are here to get you back to business as quickly as possible.

Our highly-skilled teams combine market-leading technology with Deloitte's experience and knowledge of cyber security and broader risk to provide context-rich analysis to our customers.
