

Risk sensing

The (evolving) state of the art

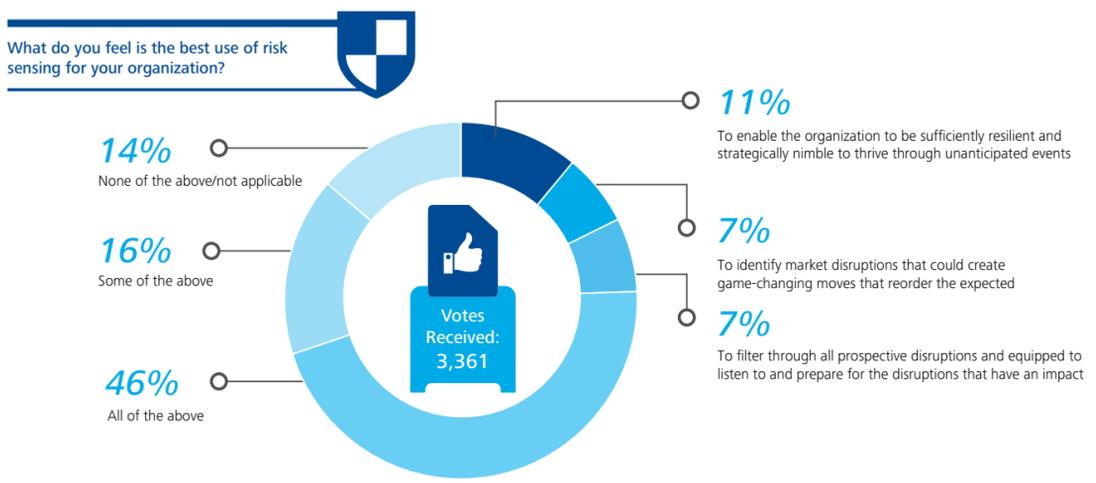

A snapshot of a recent poll

Every day, executives and boards are inundated with data—from multiple directions, all at once, and with staggering speed. Risk Sensing helps executives parse through the noise to detect emerging risks and potential sources of change. This synthesized information can empower leadership to better capitalize on and respond to shifts that have the potential to create value or mitigate threats before they become more significant.

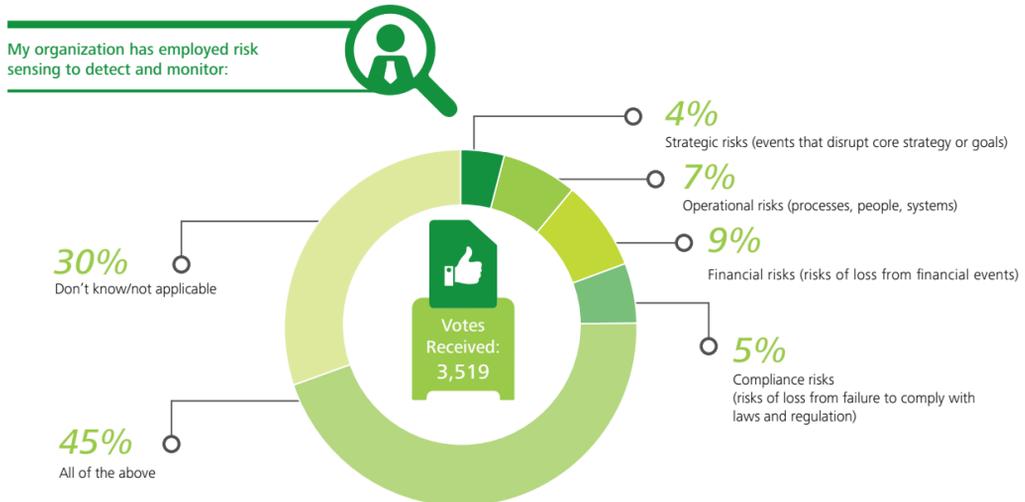

During a February 10, 2016, Deloitte Dbriefs webcast, we asked more than 3,000 C-suite executives, managers, analysts, and risk professionals from US and international companies about their risk sensing posture.¹ Here is snapshot of their responses.

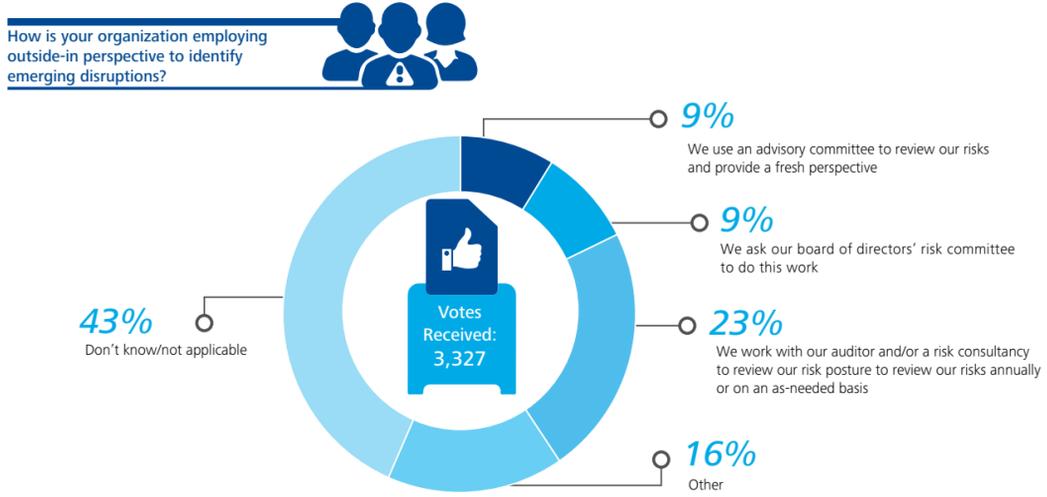

About 65 percent of respondents reported their organization was “not very” to “maturing” on their use of risk sensing. (3,351 responses)

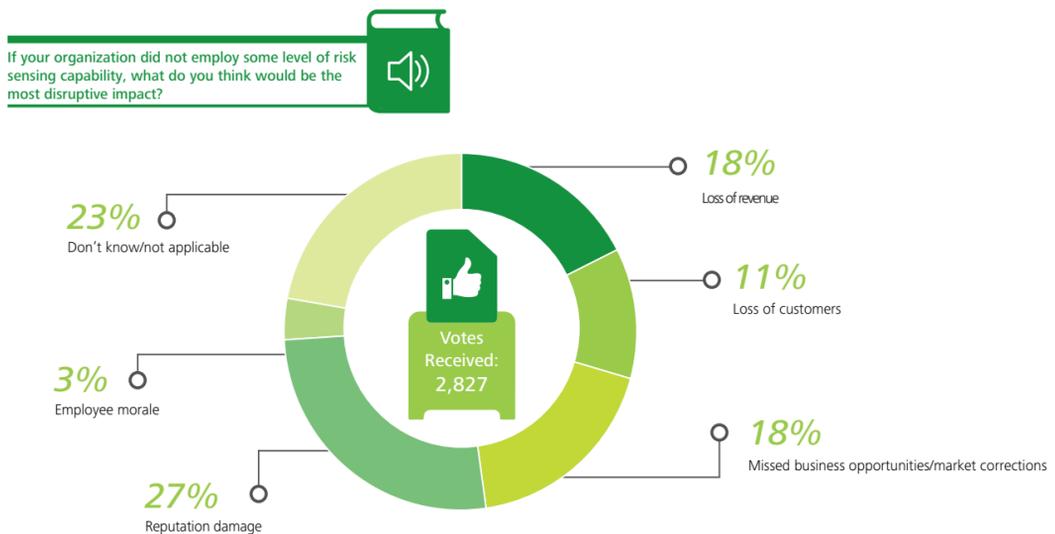

A little less than half agreed the full use of risk sensing is the best use of this capability in their organization. (3,361 responses)

A majority of respondents reported their organization is using risk sensing for detecting and monitoring risks across strategic, operational, financial, and compliance risks. (3,519 responses)

Over half of respondents are using an outside-in perspective, however that perspective comes from a variety of sources (3,327 responses)

The leading disruptive impact perceived by respondents was reputation damage, followed closely by missed business opportunities/market corrections and loss of revenue. (2,827 responses)
