Other Deloitte Publications

Other Deloitte publications, such as our Roadmap series, are available on the Deloitte Accounting Research Tool (DART), a comprehensive online library of accounting and financial disclosure literature. The Roadmap series includes titles on the following topics:

Business Combinations
Business Combinations — SEC Reporting Considerations
Carve-Out Transactions
Comparison of IFRS Standards and U.S. GAAP
Consolidation — Identifying a Controlling Financial Interest
Contingencies and Loss Recoveries
Contracts on an Entity's Own Equity
Convertible Debt
Current Expected Credit Losses
Disposals of Long-Lived Assets and Discontinued Operations
Distinguishing Liabilities From Equity
Earnings per Share
Environmental Obligations and Asset Retirement Obligations
Equity Method Investments and Joint Ventures
Equity Method Investees — SEC Reporting Considerations
Fair Value Measurements and Disclosures
Foreign Currency Transactions and Translations
Income Taxes
Initial Public Offerings
Leases
Noncontrolling Interests
Non-GAAP Financial Measures
Revenue Recognition
SEC Comment Letter Considerations, Including Industry Insights
Segment Reporting
Share-Based Payment Awards
Statement of Cash Flows
Acknowledgments and Contact Information

About Deloitte’s Life Sciences and Health Care Practice

Deloitte and its subsidiaries have approximately 312,000 professionals with a single focus: serving our clients and helping them solve their toughest problems. Deloitte’s Life Sciences and Health Care practice is among the largest in the world, leveraging the extensive knowledge, skills, and experience of over 24,000 professionals in 90 countries. Our practice offers a distinctive menu of professional services delivered in an integrated approach that address all segments of the life sciences and health care industry. We work in four key business areas — audit, advisory, tax, and consulting — but our real strength comes from combining the talents of those groups to address clients’ needs. Bloomberg Businessweek and Fortune consistently rank our organization among the best places in which to work, which is good news for our talent and our clients alike. When the best people tackle the most compelling challenges, everyone wins.

If you have any questions about this publication or ways in which we can help your organization, please contact the following Deloitte industry specialists.

Preface

March 2020

To our clients, colleagues, and other friends:

The life sciences ecosystem encompasses a vast array of entities that discover, develop, and manufacture health care products. Such entities include pharmaceutical manufacturers; biotechnology companies; medical device, diagnostic, and medical equipment manufacturers; and service companies such as drug distributors, contract research organizations (CROs), contract manufacturing organizations (CMOs), and health technology companies.

Finance and accounting professionals in the industry face complex issues and must exercise significant judgment in applying existing rules to matters such as research and development (R&D) costs, acquisitions and divestitures, consolidation, contingencies, revenue recognition, income taxes, financial instruments, and financial statement presentation and disclosure. The 2020 edition of Deloitte’s Life Sciences Industry Accounting Guide (the “Guide”) addresses these and other relevant topics affecting the industry this year. It includes interpretive guidance, illustrative examples, recent standard-setting developments (through February 28, 2020), and key differences between U.S. GAAP and IFRS® Standards. In addition, this Guide discusses the outlook for the life sciences industry in 2020. Further, while many of the key accounting and financial reporting considerations stemming from the coronavirus disease 2019 (COVID-19) outbreak are related to topics addressed in this Guide, we encourage you to review Deloitte’s March 25, 2020, Financial Reporting Alert, which discusses accounting and financial reporting considerations associated with COVID-19 that are broadly applicable as well as those that apply specifically to the life sciences industry.

Appendix B lists the titles of standards and other literature we cited, and Appendix C defines the abbreviations we used.

This Guide is available on the Deloitte Accounting Research Tool (DART).

We hope this Guide helps you navigate the various accounting and reporting challenges you face. We encourage you to contact your Deloitte team for additional information and assistance.

Sincerely,

Jeff Ellis

Chapter 7 — Statement of Cash Flows

7.1 Introduction

While the accounting principles underlying the statement of cash flows have been in place for many years, challenges in interpretation and preparation have consistently made the statement of cash flows one of the leading causes of restatements and comments from the SEC staff for life sciences entities. In Section 7.2 below, we highlight issues commonly encountered by life sciences entities that are associated with the classification of cash flows as operating, investing, or financing. For more information as well as insights into topics not addressed below, see Deloitte’s *A Roadmap to the Preparation of the Statement of Cash Flows*.

7.2 Industry Issues

7.2.1 Foreign Currency Cash Flows

The global nature of life sciences entities often gives rise to transactions that are denominated in a foreign currency and to businesses that operate in foreign functional currency environments. For example, the product supply chain structure for many life sciences entities involves the movement of materials and products across international borders throughout the manufacturing life cycle, giving rise to many transactions that are exposed to changes in the exchange rate.

An entity should report the cash flow effect of transactions denominated in a foreign currency by using the exchange rates in effect on the date of such cash flows. As noted in ASC 830-230-45-1, instead of using the actual exchange rate on the date of a foreign currency transaction, an entity may use an “appropriately weighted average exchange rate” for translation “if the result is substantially the same as if the rates at the dates of the cash flows were used.”

A consolidated entity with operations whose functional currencies are foreign currencies may use the following approach when preparing its consolidated statement of cash flows:

- Prepare a separate statement of cash flows for each foreign operation by using the operation’s functional currency.
- Translate the stand-alone cash flow statement prepared in the functional currency of each foreign entity into the reporting currency of the parent entity.
- Consolidate the individual translated statements of cash flows.

The effects of exchange rate changes, or translation gains and losses, are not the same as the effects of transaction gains and losses and should not be presented or calculated in the same manner.

Effects of exchange rate changes may have a direct impact on cash receipts and payments but do not directly result in cash flows themselves.
Because unrealized transaction gains and losses arising from the remeasurement of foreign-currency-denominated monetary assets and liabilities on the balance sheet date are included in the determination of net income, such amounts should be presented as a reconciling item between net income and net cash from operating activities (either on the face of the statement under the indirect method or in a separate schedule under the direct method).

Subsequently, any cash flows arising from the settlement of the foreign-currency-denominated asset and liability should be presented in the statement of cash flows as an operating, investing, or financing activity on the basis of the nature of such cash flows.

Translation gains and losses, however, are recognized in other comprehensive income (OCI) and are not included in the cash flows from operating, investing, or financing activities.

The effects of exchange rate changes on cash should be shown as a separate line item in the statement of cash flows as part of the reconciliation of beginning and ending cash balances. This issue was discussed in paragraph 101 of the Basis for Conclusions of FASB Statement 95, which stated, in part:

> The effects of exchange rate changes on assets and liabilities denominated in foreign currencies, like those of other price changes, may affect the amount of a cash receipt or payment. But exchange rate changes do not themselves give rise to cash flows, and their effects on items other than cash thus have no place in a statement of cash flows. To achieve its objective, a statement of cash flows should reflect the reporting currency equivalent of cash receipts and payments that occur in a foreign currency. Because the effect of exchange rate changes on the reporting currency equivalent of cash held in foreign currencies affects the change in an enterprise's cash balance during a period but is not a cash receipt or payment, the Board decided that the effect of exchange rate changes on cash should be reported as a separate item in the reconciliation of beginning and ending balances of cash. [Emphasis added]

In a manner consistent with the implementation guidance in ASC 830-230-55-15, the effect of exchange rate changes on cash and cash equivalents is the sum of the following two components:

1. For each foreign operation, the difference between the exchange rates used in translating functional currency cash flows and the exchange rate at year-end multiplied by the net cash flow activity for the period measured in the functional currency.
2. The fluctuation in the exchange rates from the beginning of the year to the end of the year multiplied by the beginning cash balance denominated in currencies other than the reporting currency.

### 7.2.2 Transactions Associated With Acquisitions

The life sciences industry continues to experience significant M&A activity, and transactions associated with acquisitions affect a company's statement of cash flows in a number of ways.

For additional considerations related to an entity's accounting for a business combination, see Deloitte’s *A Roadmap to Accounting for Business Combinations*.

#### 7.2.2.1 Presentation of Acquisition-Related Costs

When consummating a business combination, an acquirer frequently incurs acquisition-related costs such as advisory, legal, accounting, valuation, and professional and consulting fees. Except for certain debt and equity issuance costs, ASC 805 requires that an entity expense all such acquisition-related costs as incurred. The costs of issuing debt or equity securities as part of a business combination are recognized in accordance with other applicable accounting literature.
In the deliberations before the issuance of FASB Statement 141(R) (codified in ASC 805), the FASB determined that acquisition-related costs are not considered part of the fair value exchange between the buyer and seller of the business; rather, they are separate transactions in which the buyer pays for services that it receives. Further, the definition of operating activities in the ASC master glossary states, in part, that “[c]ash flows from operating activities are generally the cash effects of transactions and other events that enter into the determination of net income.” Because acquisition-related costs accounted for under ASC 805 are expensed and affect net income, these costs should be reflected as operating cash outflows in the statement of cash flows.

### 7.2.2.2 Debt in a Business Combination

The classification in the statement of cash flows of cash paid to settle acquiree debt in a business combination should be consistent with the acquirer’s treatment of the debt in acquisition accounting (i.e., whether the debt was treated as a liability assumed in acquisition accounting). If the acquirer legally assumes the acquiree’s debt as part of the business combination, the acquirer will generally present the extinguishment as a financing activity (in a manner consistent with how it would present the repayment of a debt obligation outside of a business combination). Conversely, if the acquirer does not legally assume the acquiree’s debt as part of the business combination that was subsequently extinguished, the acquirer will generally present the extinguishment as an investing activity (in a manner consistent with how it would present cash consideration paid in a business combination).

#### Example 7-1

**Acquirer Does Not Assume Acquiree’s Debt**

Company A acquires Company B in a business combination. Before the acquisition, B had $1 million in outstanding debt owed to a third-party bank. Company A pays the seller $5 million in cash and repays the $1 million debt upon the closing of the business combination. Company A concludes that it did not assume B’s debt (i.e., that it repaid the debt on B’s behalf). As of the acquisition date, B’s net assets recognized in accordance with ASC 805 are $4 million. Company A calculates the goodwill resulting from the acquisition of B as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cash consideration paid to the seller</td>
<td>$5,000,000</td>
</tr>
<tr>
<td>Repayment of B’s debt</td>
<td>$1,000,000</td>
</tr>
<tr>
<td>Total consideration transferred to acquire B</td>
<td>$6,000,000</td>
</tr>
<tr>
<td>Less: B’s net assets under ASC 805</td>
<td>$(4,000,000)</td>
</tr>
<tr>
<td>Goodwill</td>
<td>$2,000,000</td>
</tr>
</tbody>
</table>

Because A did not assume B’s debt, the total consideration transferred is $6 million in cash. Therefore, A should present the $6 million as an investing outflow in its statement of cash flows.
Example 7-2

**Acquirer Assumes Acquiree’s Debt**

Assume the same facts as in Example 7-1, except that Company A concludes that it assumed Company B’s debt. As a result, B’s net assets recognized in accordance with ASC 805 are $3 million (i.e., $4 million less $1 million in debt). Company A calculates the goodwill resulting from the acquisition of B as follows:

<table>
<thead>
<tr>
<th>Description</th>
<th>Amount</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consideration transferred to acquire B</td>
<td>$ 5,000,000</td>
</tr>
<tr>
<td>B’s net assets under ASC 805, excluding debt assumed</td>
<td>4,000,000</td>
</tr>
<tr>
<td>Add: Liability assumed for B’s debt</td>
<td>(1,000,000)</td>
</tr>
<tr>
<td>Less: B’s total net assets under ASC 805</td>
<td>(3,000,000)</td>
</tr>
<tr>
<td>Goodwill</td>
<td>$ 2,000,000</td>
</tr>
</tbody>
</table>

Because A assumed B’s debt, the consideration transferred is $5 million in cash paid to the seller, and the $1 million to repay B’s debt is a liability assumed in the acquisition accounting. Therefore, A should present $5 million as an investing outflow and $1 million as a financing outflow in its statement of cash flows.

7.2.2.3 **Contingent Consideration Classified as a Liability**

It is common in business combinations entered into by life sciences companies for a portion of the consideration to be contingent on future events. ASC 805 requires the acquirer to recognize the acquisition-date fair value of the contingent consideration arrangement as part of the consideration transferred in exchange for the acquiree. The contingent consideration arrangement is classified either as a liability or as equity in accordance with applicable U.S. GAAP. In transactions involving life sciences companies, contingent consideration is frequently classified as a liability.

If the acquiring entity determines that the contingent consideration arrangement should be classified as a liability, the initial fair value of the contingent consideration as of the acquisition date should be reflected as a noncash investing activity. In accordance with ASC 230-10-50-3, this arrangement should be either disclosed narratively or summarized in a schedule because no cash consideration is transferred on the acquisition date. It should not be reflected in investing activities. In subsequent periods, the contingent consideration liability must be remeasured at fair value as of each reporting date until the contingency is resolved, with the changes recognized as an expense in the determination of earnings (unless the change is the result of a measurement-period adjustment or the arrangement is a hedging instrument for which ASC 815 requires changes to be recognized in OCI). Because the subsequent fair value adjustment enters into the determination of the acquiring entity's net income and is a noncash item, it should be reflected as a reconciling item between net income and cash flows from operating activities in the statement of cash flows.
If the contingent consideration is satisfied in either cash or cash equivalents upon resolution of the contingency, the classification of payments made to settle the contingent consideration liability should be determined on the basis of when such payments are made in relation to the date of the business combination. Essentially, classification of the payments depends on whether they are made soon after the acquisition in a business combination transaction. While ASU 230 does not define the term “soon after,” we generally believe that this term would apply to payments made within three months or less of the acquisition date. This view is also consistent with paragraph BC16 of ASU 2016-15, which states that “some Task Force members believe that a payment for contingent consideration that was made soon after a business combination is an extension of the cash paid for the business acquisition (an investing activity), if that payment for contingent consideration was made within a relatively short period of time after the acquisition date (for example, three months or less).” Therefore, because a payment made on or soon after the business combination date (to settle the liability related to contingent consideration) is viewed as an extension of the business combination, such payments made soon after the date of the business combination are presented as investing activities in the acquirer’s statement of cash flows in accordance with ASC 230-10-45-13(d).

Conversely, contingent consideration payments that are not made on the acquisition date or soon after the business combination are not viewed as an extension of the business combination. Therefore, such payments should be separated and presented as:

- **Financing cash flows** — The cash paid to settle the contingent consideration liability recognized at fair value as of the acquisition date (including measurement-period adjustments), less payments made soon after the business combination date, should be reflected as a cash outflow for financing activities in accordance with ASC 230-10-45-15(f).
- **Operating cash flows** — The cash payments not made soon after the business combination date that exceed those classified as financing activities should be reflected as a cash outflow for operating activities in accordance with ASC 230-10-45-17(ee).

As indicated in paragraph BC14 of ASU 2016-15, the separation of contingent consideration payments not made soon after the business combination date is consistent with the approach most entities used before the ASU was issued. Paragraph BC14 further notes that this approach is the one that is most closely aligned with certain principles in ASC 230.

These principles include:

- The cash paid to settle the contingent consideration liability recognized at fair value as of the acquisition date (including measurement-period adjustments) should be reflected as a cash outflow for financing activities in the statement of cash flows. Effectively, the acquiring entity financed the acquisition and the cash outflow therefore represents a subsequent payment of principal on the borrowing and should be reflected in accordance with ASC 230-10-45-15(f).
- The remaining portion of the amount received/paid (i.e., the changes in fair value of the contingent consideration liability after the acquisition date) should be reflected as a cash inflow/outflow from operating activities because the fair value adjustments were recognized in earnings. If the amount paid to settle the contingent consideration liability is less than the amount recorded on the acquisition date (i.e., the fair value of the contingent consideration decreased), the entity would only reflect the portion of the liability that was paid as a cash outflow for financing activities. The difference between the liability and the amount paid is a fair value adjustment. This adjustment enters into the determination of the acquiring entity’s net income and is a noncash item, so it should be reflected as a reconciling item between net income and cash flows from operating activities in the consolidated statement of cash flows.
Example 7-3

On December 1, 20X2, Company A (a calendar-year-end private company) acquires 100 percent of Company B for $1 million. The purchase agreement includes a contingent consideration arrangement under which A agrees to pay additional cash consideration if the earnings of B (which will be operated as a separate subsidiary of A) exceed a specified target for the year ended December 31, 20X3. Company A classifies the contingent consideration arrangement as a liability and records the contingent consideration liability at its acquisition-date fair value amount, provisionally determined to be $500,000.

On April 15, 20X3, A finalizes its valuation of the contingent consideration liability. Therefore, A estimates the acquisition-date fair value of the contingent consideration liability to be $600,000 and records a measurement-period adjustment for $100,000 (the measurement-period adjustment related to facts and circumstances that existed as of the acquisition date), with an offsetting adjustment to goodwill.

Company B achieves the performance target for the year ended December 31, 20X3; accordingly, A determines that it must pay $750,000 to B's former owners to settle the contingent consideration arrangement. For the year ended December 31, 20X3, A recognizes $150,000 ($750,000 - $600,000) in earnings to reflect the subsequent remeasurement of the contingent consideration liability to fair value. On January 31, 20X4, A settles the obligation.

No payments to settle the liability for contingent consideration were made soon after the business acquisition date.

Company A would present the following amounts in its statement of cash flows for the years ended:

- **December 31, 20X2** — The provisional accrual of $500,000 would be reflected as a **noncash** investing activity and would be either disclosed narratively or summarized in a schedule.

- **December 31, 20X3** — The adjustment to the provisional accrual of $100,000 would be reflected as a **noncash** investing activity and would be either disclosed narratively or summarized in a schedule. The subsequent remeasurement adjustment to the contingent consideration liability of $150,000 would be reflected as a reconciling item between net income and cash flows from operating activities.

- **December 31, 20X4** — Of the $750,000 paid, $600,000 represents the amount to settle the contingent consideration liability recognized at fair value as of the acquisition date (including measurement-period adjustments) and should be reflected as a cash outflow for financing activities. The remaining portion of the $750,000 paid (i.e., the $150,000 change in fair value of the contingent consideration liability after the acquisition date) should be reflected as a cash outflow for operating activities because the fair value adjustments were recognized in earnings.

Example 7-4

Assume the same facts as in Example 7-3 except that when B achieves the performance target for the year ended December 31, 20X3, A determines that it only needs to pay $550,000 to B's former owners to settle the contingent consideration arrangement. For the year ended December 31, 20X3, A recognizes a credit of $50,000 ($550,000 - $600,000) in earnings to reflect the subsequent remeasurement of the contingent consideration liability to fair value.

Company A would present the same amounts as those in Example 7-3 in its statement of cash flows for the year ended December 31, 20X2. Company A would then present the following amounts for the years ended:

- **December 31, 20X3** — The adjustment to the provisional accrual of $100,000 would be reflected as a **noncash** investing activity and would be either disclosed narratively or summarized in a schedule. The subsequent remeasurement adjustment to the contingent consideration liability of $50,000 would be reflected as a reconciling item between net income and cash flows from operating activities.

- **December 31, 20X4** — The entire amount of the $550,000 paid represents the amount to settle the contingent consideration liability recognized at fair value as of the acquisition date (including measurement-period adjustments) and should be reflected as a cash outflow for financing activities.
7.2.2.4 Acquired IPR&D Assets With No Alternative Future Use

The acquisition of IPR&D assets as part of either a business combination or an asset acquisition is common in the life sciences industry. In accordance with ASC 730, IPR&D assets acquired in an asset acquisition rather than in a business combination should be expensed as of the acquisition date unless such assets have an alternative future use, in which case they should be capitalized. All IPR&D assets acquired in a business combination should initially be capitalized regardless of whether they have an alternative future use. See Chapter 4 for additional information.

We have observed diversity in practice related to how cash payments for IPR&D assets acquired in an asset acquisition are reported in the statement of cash flows when such assets have no alternative future use. While some entities classify the cash payments in operating activities, other entities classify them in investing activities. Given the lack of authoritative guidance on this matter and the diversity in practice, we believe that it is acceptable for an entity to present cash payments related to the IPR&D assets acquired in an asset acquisition that have no alternative use as either operating or investing activities. This election is an accounting policy matter that an entity should consistently apply to similar arrangements and disclose if material.

Considerations related to the classification as operating or investing activities include:

- **Operating activities** — Classification in operating activities of cash outflows for IPR&D assets acquired in an asset acquisition that do not have an alternative future use is supported by the following:
  - ASC 230 does not specifically define such cash outflows as investing or financing activities.
  - Since such cash outflows are immediately expensed, they represent "the cash effects of transactions and other events that enter into the determination of net income" in a manner consistent with the definition of operating activities in the ASC master glossary.

- **Investing activities** — Classification in investing activities of cash outflows for IPR&D assets acquired in an asset acquisition that do not have an alternative future use is supported by the following Q&A in paragraph 5.12 of the AICPA Accounting and Valuation Guide Assets Acquired to Be Used in Research and Development Activities:

  **Question 1:** How should an acquiring entity classify in its statement of cash flows an R&D charge associated with the costs of IPR&D projects acquired as part of an asset acquisition that have no alternative future use?

  **Answer:** Best practices suggest that an acquiring entity should report its cash acquisition of assets to be used in R&D activities as an investing outflow in its statement of cash flows. In this regard, an acquiring entity should treat assets acquired to be used in R&D activities similar to how it reports other acquired assets in the statement of cash flows. Although acquired IPR&D may lack an alternative future use and, therefore, would be expensed immediately, it is still an asset for cash flow statement purposes.

  When arriving at cash flows from operating activities under the indirect method of reporting cash flows, best practices suggest that an acquiring entity should add back to net income the costs of assets acquired to be used in R&D activities that are charged to expense. That adjustment is necessary to eliminate from operating cash flows those cash outflows of assets acquired to be used in R&D activities that are reflected in investing activities.

  In addition, if the cash outflows are treated as investing activities, the cash flow reporting of IPR&D assets acquired in a business combination would be aligned with that of IPR&D assets acquired in an asset acquisition.
7.2.2.5 Settlement of Acquired Liabilities After a Business Combination

After an acquisition, the acquirer may make payments to settle a liability legally assumed in a business combination. The cash outflow related to the settlement of the liability could be classified as an operating, investing, or financing activity depending on the nature of the payment. The payment should be classified as it would have been in the absence of the business combination. For example:

- If the payment was for inventory purchased on account, it would represent an operating cash outflow.
- If the payment was for property, plant, and equipment that was purchased on account and was paid within three months of its original purchase date, it would represent an investing cash outflow.
- If the payment was in connection with a debt obligation legally assumed in an acquisition that remained outstanding after the acquisition, it would represent a financing cash outflow. However, as described in Section 7.2.2.2, if the payment is related to debt extinguished in conjunction with a business combination, the entity must consider certain facts and circumstances of the business combination to determine the appropriate presentation in its statement of cash flows.

7.2.3 Stock Compensation

The complexity of stock compensation arrangements often leads to additional presentation issues related to a life sciences entity’s statement of cash flows. Two of the more common issues encountered by life sciences entities are addressed below.

7.2.3.1 Settlement of Equity-Classified Share-Based Payment Awards

When settling an equity-classified share-based payment award, an entity presents the settlement in its statement of cash flows on the basis of whether the amount paid to settle the award is greater than or less than the fair-value-based measure of the award on the settlement date:

- **Amount paid to settle the award does not exceed the fair-value-based measure of the award on the settlement date** — In accordance with ASC 718-20-35-7, if the cash paid to repurchase the equity-classified award does not exceed the fair-value-based measure of the award on the repurchase date, the cash paid to repurchase the award is charged to equity. That is, repurchase of the equity-classified award is viewed as reacquisition of the entity’s equity instruments. Accordingly, the cash paid to reacquire the entity’s equity instruments is presented as a cash outflow for financing activities under ASC 230-10-45-15(a), which indicates that payments of dividends or other distributions to owners, including outlays to reacquire the entity’s equity instruments, are cash outflows for financing activities.

- **Amount paid to settle the award exceeds the fair-value-based measure of the award on the settlement date** — If the cash paid to repurchase the equity-classified award exceeds the fair-value-based measure of the award on the repurchase date, the cash paid in excess of the fair-value-based measure of the award is viewed as compensation for additional employee services and is recognized as additional compensation cost. Accordingly, if the equity-classified award is repurchased for an amount in excess of the fair-value-based measure, the portion of the cash paid to reacquire the entity’s equity instruments that equals the fair-value-based measure of the award is presented as a cash outflow for financing activities under ASC 230-10-45-15(a). The portion of the cash paid in excess of the fair-value-based measure, for additional employee services, is presented as a cash outflow for operating activities under ASC 230-10-45-17(b), which notes that cash payments to employees for services are cash outflows for operating activities.
Example 7-5

Company A is making a tender offer to repurchase $20 million of common stock in the aggregate (the stock was originally distributed as share-based compensation awards) from its current employees. On the basis of an independent third-party valuation, A concludes that the purchase price paid to the employees for the common stock exceeds the fair value of the common stock by a total of $4.5 million. In accordance with ASC 718-20-35-7, the amount paid to employees up to the fair value of common stock acquired should be recognized in equity as a treasury stock transaction and should therefore be presented as a cash outflow for financing activities. The $4.5 million that was paid in excess of the fair value of the common stock constitutes compensation expense and is therefore presented as a cash outflow for operating activities.

7.2.3.2 Settlement of Liability-Classified Share-Based Payment Awards

In accordance with ASC 718-30, the grant-date fair-value-based measure and any subsequent changes in the fair-value-based measure of a liability-classified award through the date of settlement are recognized as compensation cost. Accordingly, the cash paid to settle the liability-classified award is effectively payment for employee services and is presented as a cash outflow for operating activities under ASC 230-10-45-17(b).

Note that an entity may enter into an agreement to repurchase (or offer to repurchase) an equity-classified award for cash. Depending on the facts and circumstances, the agreement to repurchase (or offer to repurchase) may be accounted for as either (1) a settlement of the equity-classified award or (2) a modification of the equity-classified award that changes the award's classification from equity to liability, followed by a settlement of the now liability-classified award.

If the agreement to repurchase (or offer to repurchase) is considered a settlement of an equity-classified award, the cash paid to reacquire the entity's equity instruments is presented in a manner consistent with the equity awards discussed in Section 7.2.3.1. If the agreement to repurchase (or offer to repurchase) is considered a modification of the equity-classified award that changes the award's classification from equity to liability, the cash paid to settle the liability-classified award should be presented in the statement of cash flows in a manner similar to the conclusion above. That is, under ASC 230-10-45-17(b), the cash paid to settle the liability-classified award is effectively payment for employee services and is presented as a cash outflow for operating activities.

7.2.4 Government Grants

Government grants are a form of government assistance that may be granted to PBEs or private companies to encourage those entities to fulfill certain objectives (e.g., providing a financial grant to an entity to fund cancer research). Generally, a recipient of a government grant is not expected to repay the grant provided that the recipient complies with the grant's conditions.

Not all government assistance is provided to a recipient in the form of a cash payment. For example, a government grant could be in the form of tax credits. In these situations, an entity must determine whether the tax credits are refundable.

Refundable tax credits (e.g., qualifying R&D credits in certain countries and state jurisdictions and alternative fuel tax credits for U.S. federal income tax) do not depend on an entity's ongoing tax status or tax position, allowing an entity to receive a refund despite being in a taxable loss position. Consequently, the refundable tax credits are similar to government grants and are generally accounted for similarly. The discussions below address such tax credits as well as other government grants. For more information on the accounting for refundable tax credits, see Deloitte's A Roadmap to Accounting for Income Taxes.
Tax credits whose realization ultimately depends on taxable income (e.g., investment tax credits and R&D) are not refundable. Such tax credits are recognized as a reduction of income tax, should be accounted for in accordance with ASC 740, and are not discussed in this section. Entities are encouraged to consult with their accounting advisers when it is not clear whether tax credits are refundable.

7.2.4.1 Expenditures Incurred Before Receipt of a Grant

When an entity pays for capital expenditures or operating expenses before the reimbursement of government grant monies, it should present the receipt of the government grant in the statement of cash flows in a manner consistent with the presentation of the related cash outflow (as determined under ASC 230-10-45). For example, a government grant that is intended to reimburse an entity for qualifying operating expenses would be presented in the statement of cash flows as an operating activity if the grant was received after the operating expenses were incurred.

Example 7-6

Entity C is entitled to receive $100 million in tax credits upon completing a new manufacturing facility and obtaining a certificate of occupancy from the local authority. Because C does not need to incur a tax liability to collect the tax credits, the tax credits are refundable and are not within the scope of ASC 740.

On December 31, 20X1, C starts the construction of the facility and presents the capital expenditures as an investing activity in its statement of cash flows. On December 31, 20X2, C completes the manufacturing facility and pays the remaining total construction costs. On January 1, 20X3, C obtains the certificate of occupancy and receives the $100 million in tax credits.

In this example, because the construction costs are classified as an investing activity in C's statement of cash flows and the payments are made before the receipt of the grant, C would present the grant monies as an investing activity in its statement of cash flows for 20X3.

Example 7-7

Entity P is awarded a government grant to receive up to $50 million of aggregate funding for certain R&D activities. The intent of the government grant is for P to perform R&D activities to achieve the grant's stated objectives, and the grant will be funded once the qualifying R&D costs have been incurred and paid by P.

Entity P records R&D expenses as period expenses and classifies the cash outflows for the R&D expenses as an operating activity in its statement of cash flows. Therefore, P should classify the cash inflows from receipt of grant monies as an operating activity in its statement of cash flows.

7.2.4.2 Expenditures Incurred After Receipt of a Grant

Receiving a grant before incurring the related expenditures is similar to an entity's receipt of a refundable loan advance or to an NFP's receipt of a contribution of refundable advance that by donor stipulation is restricted for capital investment. ASC 230-10-45-14(c) requires that the following be classified as cash inflows from financing activities:

Receipts from contributions and investment income that by donor stipulation are restricted for the purposes of acquiring, constructing, or improving property, plant, equipment, or other long-lived assets or establishing or increasing a donor-restricted endowment fund.

Therefore, when an entity receives the government grant before incurring the related capital expenditures or operating expenses, it should present the receipt of the government grant as a financing cash inflow in the statement of cash flows. In addition, when the entity incurs the expenditures in accordance with the conditions of the government grant, it should disclose the existence of a noncash financing activity resulting from the fulfillment of the grant requirements.
Chapter 7 — Statement of Cash Flows

Example 7-8
Assume the same facts as in Example 7-6 except that the grant monies are received before any capital expenditures are incurred. Entity C would record the grant monies as an asset with a corresponding liability on the balance sheet. The receipt of the grant would be reflected as a financing cash inflow in the statement of cash flows in accordance with ASC 230-10-45-14(c).

7.2.5 Insurance Proceeds
ASC 230-10-45-21B states that “[c]ash receipts resulting from the settlement of insurance claims, excluding proceeds received from corporate-owned life insurance policies and bank-owned life insurance policies, shall be classified on the basis of the related insurance coverage (that is, the nature of the loss).” In addition, for lump-sum settlements, “an entity shall determine the classification on the basis of the nature of each loss included in the settlement.”

Entities should determine the classification of insurance receipts that have aspects of more than one class of cash flows by first applying specific guidance in U.S. GAAP. When such guidance is not available, financial statement preparers should separate each identifiable source of cash flows on the basis of the nature of the underlying cash flows. Each separately identified source of cash receipts should then be classified on the basis of its nature. Classification based on the activity that is most likely to be the predominant source of cash flows is appropriate only when the source of insurance receipts has multiple characteristics and is not separately identifiable.

For example, insurance settlement proceeds received as a result of a claim made in connection with the destruction of productive assets should be classified as cash inflows from investing activities because the settlement proceeds could be analogous to proceeds received on the sale of such assets. However, proceeds received as a result of claims related to a business interruption should be classified as operating activities.

Example 7-9
Business Interruption Cash Flow Classification
A flash flood destroys several drums of active pharmaceutical ingredient (API) and a building at the corporate headquarters of Company X, a pharmaceutical manufacturer. As a result of the damage, X is inoperable for three months until it can restock its inventory and repair its corporate headquarters. Company X has business interruption and property insurance that covers lost profit margins, lost inventory, and damaged equipment and property. Covered losses under the insurance policy include natural disasters, such as floods.

Company X receives a lump-sum insurance payment of $85 for lost profit margin, lost API inventory, and corporate headquarters repairs. In a manner consistent with the submitted claim, X determines that $15 should be allocated to lost profit margin, $45 to damaged inventory, and $25 to rebuilding a portion of the corporate headquarters.

Company X appropriately classifies the insurance receipt in the statement of cash flows as follows:
- $15 lost profit margin as operating inflow.
- $45 lost inventory as operating inflow.
- $25 corporate headquarters reconstruction as investing inflow.

For additional information on the determination of more than one class of cash flows, see Section 7.2.6.1 below and Section 6.4 of Deloitte’s A Roadmap to the Preparation of the Statement of Cash Flows.
7.2.6 Classification of Certain Cash Receipts and Cash Payments

7.2.6.1 More Than One Class of Cash Flows

Certain cash receipts and payments may have aspects of more than one class of cash flows. Paragraph BC39 of ASU 2016-15 provides guidance on “when an entity should separate cash receipts and cash payments and classify them into more than one class of cash flows . . . and when an entity should classify the aggregate of those cash receipts and payments into one class of cash flows based on predominance.” The classification of cash receipts and payments that have aspects of more than one class of cash flows should be determined in accordance with the following three-step approach:

1. An entity should first apply specific guidance in U.S. GAAP, if applicable.
2. If there is no specific guidance related to the cash receipt or payment, an entity should bifurcate the cash payment or receipt into “each separately identifiable source or use [of cash] on the basis of the nature of the underlying cash flows.” Each separately identifiable source or use of cash will be classified as operating, investing, or financing activities in accordance with the guidance in ASC 230.
3. If the cash payment or receipt cannot be bifurcated, the entire payment or receipt should be classified as operating, investing, or financing activities on the basis of the activity that is likely to be the predominant source or use of cash. An entity should be consistent in how it classifies cash outflows and inflows. Cash flow classification should be consistent even if doing so creates asymmetry with how the transaction is presented in the balance sheet and income statement. When such asymmetry exists, an entity should include appropriate disclosures that explain such differences.

An entity should not default to classification based on predominance. Unless an entity can conclude that sources or uses of cash payments or receipts are not separately identifiable, the entity must first allocate amounts of each cash receipt or payment that has aspects of more than one class of cash flows on the basis of the nature of the underlying cash flows for each separately identifiable source or use of cash. However, because the guidance does not define the term “separately identifiable,” entities must use judgment when applying the guidance.

7.2.6.2 Classification of Cash Flows of Repayments of Zero-Coupon Bonds and Other Debt Instruments With Coupon Interest Rates That Are Insignificant in Relation to the Effective Interest Rate of the Borrowing

An entity that issues zero-coupon bonds to an investor records the proceeds from the bonds’ issuance as a financing cash inflow. The bonds are accreted to their redemption value in accordance with the “interest” method, as described in ASC 835 (i.e., the carrying amount of the bonds increases from issuance until maturity [or earlier if prepayment is allowed] for the accrued interest to arrive at the bonds’ redemption value). On the maturity date (or earlier if prepayment is allowed), the entity repays (1) the original proceeds (the principal amount of the bonds) and (2) the accrued interest from the date of issuance. Before the bonds’ maturity (or the date of prepayment, if earlier), the interest expense is presented in the statement of cash flows as a reconciling item between net income and cash flows from operating activities, since no interim cash payments are made for the periodic accrual of interest.

1 Quoted from the Summary of ASU 2016-15.
2 ASC 835-30-35-4 states that “[o]ther methods of amortization may be used if the results obtained are not materially different from those that would result from the interest method.”
At redemption, the cash paid to settle the interest component is reflected as a cash outflow from operating activities in the statement of cash flows in accordance with ASC 230-10-45-17 and ASC 230-10-45-25 as the accrued interest is recognized in earnings. The cash paid to settle the principal is reflected as a cash outflow from financing activities in the statement of cash flows in accordance with ASC 230-10-45-15.

This guidance also applies to other debt instruments with coupon rates that are insignificant in relation to the effective interest rate of the borrowing. An entity will need to use judgment when assessing the significance of the coupon rate since ASC 230 does not provide guidance on how to make such a determination. We generally believe that an entity should determine whether an interest rate is insignificant by looking to the market. For example, a 1 percent coupon rate may not be insignificant if the market rate is 2 percent. However, an entity may conclude that a 1 percent coupon rate is insignificant compared with a market rate of 10 percent and that the 1 percent rate is therefore within the scope of ASC 230-10-45-15, ASC 230-10-45-17, and ASC 230-10-25.

### 7.2.6.3 Distributions From Equity Method Investments

ASC 230 distinguishes between returns of investment, which should be classified as cash inflows from investing activities (see ASC 230-10-45-12(b)), and returns on investment, which should be classified as cash inflows from operating activities (see ASC 230-10-45-16(b)). Accordingly, to make the appropriate classification in the statement of cash flows, entities must determine whether distributions received from an equity method investee represent a “return on” or a “return of” the related investment.

ASC 230-10-45-21D indicates that there are two acceptable methods for determining whether distributions from equity method investments are returns on investment or returns of investment. Under the first method (the “cumulative earnings” approach), distributions are presumed to be returns on investment. When classifying the related cash flows under this approach, an entity should compare cumulative (i.e., since inception) distributions received by the investor, less distributions received in prior periods that were determined to be returns of investment, with the investor’s cumulative equity in earnings. Cumulative distributions received that do not exceed cumulative equity in earnings represent returns on investment and should be classified as cash inflows from operating activities. Cumulative distributions received in excess of the investor’s cumulative equity in earnings represent returns of investment and therefore should be classified as cash inflows from investing activities.

Under the second method (the “nature-of-the-distribution” approach), an entity evaluates the specific facts and circumstances of each distribution to determine its nature. Unlike the cumulative earnings approach, the nature-of-the-distribution approach does not presume that a distribution is a return on investment; rather, an entity using this approach must conduct an analysis to determine the nature of each distribution and may be required to use significant judgment in making this determination. Examples of distributions that may represent returns of investment include, but are not limited to, liquidating dividends and dividends representing proceeds from the sale of property, plant, and equipment. These distributions should be classified as cash inflows from investing activities to the extent that they are considered to represent returns of investment.
An entity can elect to apply either of these approaches as an accounting policy and must select a single method for all of its equity method investments. Under either approach, an entity should comply with the disclosure requirements in ASC 235-10-50-1 through 50-6. However, if an entity selects the nature-of-the-distribution approach for its equity method investments but cannot obtain the information it needs to evaluate the nature of the distributions for any individual equity method investment, the entity must report a change in accounting principle retrospectively by applying the “cumulative earnings” approach to any such equity method investment. In other words, an entity is not required to apply the cumulative earnings approach to all of its equity method investments when it is unable to obtain adequate information for certain equity method investments; rather, this approach must only be applied to the equity method investments for which the information could not be obtained.

**Connecting the Dots**

Although entities are permitted to elect the approach under which distributions may be evaluated, it does not remove the requirement for entities to evaluate whether each distribution from an equity method investment represents a return on investment or a return of investment, particularly when entities elect the nature-of-the-distribution approach. In other words, because the nature-of-the-distribution approach does not presume that a distribution is a return on investment, it requires that an entity analyze each distribution to determine its nature. Further, entities that elect the cumulative earnings approach may generally presume distributions to represent a return on investment, unless such distributions represent returns of investment (i.e., they exceed the investor's cumulative equity in earnings).

In addition, because ASC 230 does not provide guidance on how much information (e.g., the type and sufficiency of investee information) an entity needs to determine the nature of a distribution, an entity that applies the nature-of-the-distribution approach will most likely need to use significant judgment in making this determination. We generally believe that such information should be sufficiently reliable and that the degree of reliability is likely to increase in proportion to the materiality of the distribution.

### 7.2.7 Restricted Cash

An entity should include in its cash and cash-equivalent balances in the statement of cash flows those amounts that are generally described as restricted cash and restricted cash equivalents. Accordingly, changes in restricted cash and restricted cash equivalents that result from transfers between cash, cash equivalents, and restricted cash and restricted cash equivalents should not be presented as cash flow activities in an entity's statement of cash flows. This stipulation is consistent with paragraph BC8 of ASU 2016-18, which states, in part:

> The Task Force believes that internal transfers between cash, cash equivalents, and amounts generally described as restricted cash or restricted cash equivalents do not represent a cash inflow or outflow of the entity because there is no cash receipt or cash payment with a source outside of the entity that affects the sum of cash, cash equivalents, and amounts generally described as restricted cash or restricted cash equivalents.
