

**About Deloitte**

Deloitte refers to one or more of Deloitte Touche Tohmatsu Limited, a UK private company limited by guarantee ("DTTL"), its network of member firms, and their related entities. DTTL and each of its member firms are legally separate and independent entities. DTTL (also referred to as "Deloitte Global") does not provide services to clients. In the United States, Deloitte refers to one or more of the US member firms of DTTL, their related entities that operate using the "Deloitte" name in the United States and their respective affiliates. Certain services may not be available to attest clients under the rules and regulations of public accounting. Please see [www.deloitte.com/us/about](http://www.deloitte.com/us/about) to learn more about our global network of member firms.

## Other Deloitte Publications

Other Deloitte publications, such as our [Roadmap Series](#), are available on the [Deloitte Accounting Research Tool \(DART\)](#), a comprehensive online library of accounting and financial disclosure literature. The Roadmap series includes titles on the following topics:

*Business Acquisitions — SEC Reporting Considerations*

*Business Combinations*

*Carve-Out Transactions*

*Comparing IFRS Accounting Standards and U.S. GAAP*

*Consolidation — Identifying a Controlling Financial Interest*

*Contingencies, Loss Recoveries, and Guarantees*

*Contracts on an Entity's Own Equity*

*Convertible Debt (Before Adoption of ASU 2020-06)*

*Current Expected Credit Losses*

*Debt*

*Distinguishing Liabilities From Equity*

*Earnings per Share*

*Environmental Obligations and Asset Retirement Obligations*

*Equity Method Investees — SEC Reporting Considerations*

*Equity Method Investments and Joint Ventures*

*Fair Value Measurements and Disclosures (Including the Fair Value Option)*

*Foreign Currency Matters*

*Guarantees and Collateralizations — SEC Reporting Considerations*

*Hedge Accounting*

*Impairments and Disposals of Long-Lived Assets and Discontinued Operations*

*Income Taxes*

*Initial Public Offerings*

*Leases*

*Noncontrolling Interests*

*Non-GAAP Financial Measures and Metrics*

*Revenue Recognition*

*SEC Comment Letter Considerations, Including Industry Insights*

*Segment Reporting*

*Share-Based Payment Awards*

*Statement of Cash Flows*

*Transfers and Servicing of Financial Assets*

# Preface

We are pleased to present the inaugural edition of Deloitte's *Technology Industry Accounting Guide* (the "Guide").

The technology industry ecosystem encompasses a wide array of entities, from enterprise software and software-as-a-service (SaaS) providers to hardware and semiconductor manufacturers. The technology industry has also experienced convergence with other types of businesses, creating subsectors such as fintech, health tech, energy tech, education tech, and auto tech, to name a few. Many entities have fueled the significant growth of the technology industry by embracing emerging technologies such as artificial intelligence (AI) and machine learning, everything as a service (XaaS) powered by the cloud, robotics, the Internet of Things (IoT), blockchain, and edge computing. Continuous innovation by technology entities produces novel business models while introducing potentially complex accounting and financial reporting matters.

Finance and accounting professionals in the technology industry face complex issues and must exercise significant judgment in applying existing rules to matters such as revenue recognition, software-related costs, acquisitions and divestitures, consolidation, stock-based compensation, leases, financial instruments, income taxes, digital assets, initial public offerings (IPOs), and disclosures of non-GAAP measures and metrics. To help technology entities work through some of the more difficult accounting and financial reporting issues related to these and other relevant topics, this Guide includes interpretive guidance, illustrative examples, and discussion of recent standard-setting developments (through February 28, 2023).

[Appendix A](#) lists the titles of standards and other literature we cited, and [Appendix B](#) defines the abbreviations we used.

We hope this Guide is helpful in navigating the various accounting and reporting challenges that technology entities face. We encourage clients to contact their Deloitte team for additional information and assistance.

# Chapter 5 — Other Accounting and Financial Reporting Topics

## 5.11 Initial Public Offerings

After a record-breaking year for IPOs and SPACs in 2021, the market began slowing down significantly in 2022 amid various challenges, including volatile markets, geopolitical conflicts, inflation, interest rate increases, supply-chain issues, and COVID-19 (which has continued to affect the global economy). Despite such challenges, private technology entities continue to evaluate the methods used to go public in anticipation of better market conditions in the future. Such methods include a “traditional” IPO, in which a private entity sells its equity in a public underwritten offering. However, over the past several years, nontraditional IPOs have become more popular. Rather than undertaking traditional IPOs, some private operating entities have chosen to merge with SPACs to raise capital or use other financing alternatives, such as direct listings. Nevertheless, the volume of SPACs has declined significantly in the past year.

Before an entity commences a public offering of securities, it must file a registration statement with the SEC under the applicable securities laws. Both the form used to file the registration statement and the filing and review process will depend on the nature of the offering. Entities undertaking a traditional IPO can voluntarily submit a draft registration statement to the SEC staff for confidential, nonpublic review. The ability to file confidentially is a significant benefit because it allows entities to keep potentially sensitive information from customers or competitors until later in the IPO process. Confidential initial submissions are subsequently filed publicly no later than 15 days before (1) a roadshow or (2) the requested effective date of the registration statement if no roadshow is planned.

Once submitted to or filed with the SEC, a registration statement is reviewed by the Division staff, which will generally complete its initial review and furnish its first set of comments within 30 calendar days. The entity then responds to each of the staff’s comments and reflects edits to the draft registration statement in an amended filing, which the staff will also review. An entity can expect several rounds of comment letters containing follow-up questions on responses to original comments as well as additional comments on new information included in the amended registration statement. After the initial review, subsequent comments are typically furnished within two weeks. For more information about typical SEC staff comments, see Deloitte’s Roadmap [SEC Comment Letter Considerations, Including Industry Insights](#).

### 5.11.1 Types of Issuers

The requirements for an IPO can vary from entity to entity. Factors that may affect the requirements include:

- Whether the entity is a domestic issuer or a foreign private issuer.
- Whether the entity qualifies as a smaller reporting company (SRC).
- Whether the entity qualifies as an emerging growth company (EGC).

Once an entity completes a public offering and becomes an SEC registrant, it will also need to determine its SEC filer status as a large accelerated filer, an accelerated filer, or a nonaccelerated filer, which will further affect the entity's filing obligations and deadlines. An entity undertaking an IPO will initially be considered a nonaccelerated filer since large accelerated or accelerated filers must have filed at least one annual report and must have been subject to the requirements of Sections 13(a) and 15(d) of the Securities Exchange Act of 1934 (the "Exchange Act") for at least 12 months. Accordingly, a registrant generally cannot be considered a large accelerated or accelerated filer for its first Form 10-K filing as a public entity. For more information about the types of issuers, see [Section 1.2](#) of Deloitte's Roadmap *Initial Public Offerings*.

### 5.11.1.1 Smaller Reporting Companies

A registrant may qualify as an SRC on the basis of either a public float test or a revenue test. The thresholds for qualification as an SRC are as follows:

Criteria	Definition
Public float test	Less than \$250 million of public float as of the last business day of the registrant's second fiscal quarter
Revenue test	Less than \$100 million of revenue as of the most recently completed fiscal year for which audited financial statements are available and public float less than \$700 million as of the last business day of the registrant's second fiscal quarter

A key feature of reducing the reporting burden on SRCs is the scaling back of the requirements in both SEC Regulation S-X and SEC Regulation S-K.

An entity may qualify as both an SRC and an EGC; however, unlike the five-year limit for qualifying as an EGC, there is no time limit for qualifying as an SRC.

In addition, after its IPO, an entity could both (1) qualify as an SRC and be eligible for the scaled disclosure requirements available to such an entity and (2) be an accelerated filer and subject to those requirements, including the shorter deadlines for periodic filings and the requirement to include in the entity's filings an auditor's attestation report on internal control over financial reporting (ICFR), as required by Section 404(b) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley").

The table below further summarizes the initial assessment criteria for SRC status on the basis of public float and revenue levels in the context of the requirements in Section 404(b) of Sarbanes-Oxley.

Status	Definition		Sarbanes-Oxley Section 404(b) Requirement
	Public Float	Annual Revenues	
SRC and nonaccelerated filer	Less than \$75 million	No limit	No
	\$75 million to less than \$700 million	Less than \$100 million	No
SRC and accelerated filer	\$75 million to less than \$250 million	\$100 million or more	Yes

For more information about SRCs, see [Section 1.5](#) of Deloitte's Roadmap *Initial Public Offerings*.

### 5.11.1.2 Emerging Growth Companies

An EGC is a category of issuer that was established in 2012 under the Jumpstart Our Business Startups Act (commonly known as the “JOBS Act”) and was granted additional accommodations in 2015 under the Fixing America’s Surface Transportation Act (commonly known as the “FAST Act”). The less stringent regulatory and reporting requirements for EGCs are intended to encourage such entities to undertake public offerings. A private entity undertaking an IPO will generally qualify as an EGC if it (1) has total annual gross revenues of less than \$1.235 billion during its most recently completed fiscal year and (2) has not issued more than \$1 billion in nonconvertible debt in the past three years. Once an entity completes its IPO, it must meet additional criteria to retain EGC status.

There are many potential benefits for registrants that file an IPO as an EGC. For example, EGCs:

- Need only two years of audited financial statements in an IPO of common equity.<sup>1</sup>
- May omit financial information (including audited financial statements) from an IPO registration statement if that financial information is related to periods that are not reasonably expected to be required at the time the registration statement becomes effective.
- May elect not to adopt new or revised accounting standards until they become effective for private entities (i.e., nonissuers).
- Are eligible for reduced executive compensation disclosures.

After a registrant files an IPO as an EGC, provided that the registrant retains its EGC status, additional accommodations are available for its ongoing reporting obligations. One of the most significant of these accommodations exempts EGCs from the requirement to obtain, from the entity’s independent registered public accounting firm, an auditor’s report on the entity’s ICFR. EGCs are also exempt, unless the SEC deems it is necessary, from any future PCAOB rules that may require (1) rotation of independent registered public accounting firms or (2) supplements to the auditor’s report, such as communications regarding critical audit matters (CAMs), which are required for certain other issuers.<sup>2</sup>

After going public, a registrant will retain its EGC status until the earliest of:

- The last day of the fiscal year in which its total annual gross revenues exceed \$1.235 billion.
- The date on which it has issued more than \$1 billion in nonconvertible debt securities during the previous three years.
- The date on which it becomes a large accelerated filer (which is an annual assessment performed on the last day of the fiscal year on the basis of public float as of the end of the second fiscal quarter). To be considered a large accelerated filer, the registrant must have filed at least one annual report and must have been subject to the requirements of Sections 13(a) and 15(d) of the Exchange Act for at least 12 months. Accordingly, the registrant generally cannot be considered a large accelerated filer for its first Form 10-K filing as a public entity.
- The last day of the fiscal year after the fifth anniversary of the date of the first sale of common equity securities under an effective Securities Act of 1933 (the “Securities Act”) registration statement for an EGC.

<sup>1</sup> This accommodation is limited to an IPO of common equity. As the SEC clarifies in [paragraph 10220.1](#) of the FRM, an entity will generally need to include three years of audited financial statements when entering into an IPO of debt securities or filing an Exchange Act registration statement, such as a Form 10, to register securities.

<sup>2</sup> CAMs are required for audits of all issuers except (1) brokers and dealers; (2) registered investment companies other than business development companies; (3) employee stock purchase, savings, and similar plans; and (4) EGCs.

As noted above, an EGC may elect to adopt new accounting standards on the basis of effective dates that apply to non-PBEs (e.g., the option to first adopt a new standard in annual financial statements). However, such an election is available only for as long as the entity qualifies as an EGC. An entity may lose EGC status after the effective date for PBEs but before the effective date for non-PBEs. As discussed in [paragraph 10230.1](#) of the FRM, the SEC staff generally expects an EGC that loses its EGC status to comply with the PBE requirements in the first filing after loss of EGC status. Accordingly, a registrant that loses EGC status before adopting a new standard should reflect such adoption as of the beginning of the current fiscal year. Previously issued financial statements do not need to be amended unless the standard requires full retrospective application. Entities that lose EGC status during the IPO process would reflect adoption of any deferred standards in their first periodic report (i.e., on Form 10-Q or Form 10-K) after the IPO. Entities that lose EGC status after their IPO would reflect adoption of any deferred standards in their next periodic report (i.e., on Form 10-Q or Form 10-K) after loss of EGC status.

For more information about EGCs, see [Section 1.6](#) of Deloitte's Roadmap *Initial Public Offerings*.

### 5.11.2 Types of IPOs

An IPO represents a private entity's initial registration of debt or equity securities with the SEC. However, there are many ways in which an entity can become public, including:

- Sale of newly issued common shares to the public.
- The exchange of debt securities previously issued in a private transaction for registered debt securities.
- The registering of currently outstanding equity securities.
- The distribution of shares in a spin-off transaction by a public company.
- The registering of securities that are issued by a SPAC.

Regardless of the nature of the IPO transaction or the type of securities registered, upon effectiveness, the issuer will be "public" and will therefore be required to begin complying with the periodic reporting requirements of the Exchange Act (e.g., filing of Forms 10-K, 10-Q, and 8-K). For more information about the types of IPOs, see [Section 1.3](#) of Deloitte's Roadmap *Initial Public Offerings*.

#### 5.11.2.1 Special-Purpose Acquisition Companies

A SPAC is a newly created entity that raises cash in an IPO and uses it to fund the acquisition of one or more private operating entities. After the IPO, the SPAC's management looks to complete an acquisition of a target entity within the period specified in its governing documents (e.g., 24 months). If an acquisition cannot be completed within this time frame, the cash raised in the IPO must generally be returned to investors. Because SPACs hold no assets other than cash before completing an acquisition, they are nonoperating public "shell companies" as defined by the SEC. If a target is identified and the SPAC is able to successfully complete the acquisition transaction, the private operating entity target will succeed to the SPAC's filing status as a result of the merger. On the closing date of the acquisition, the former private operating entity, as the predecessor to the SPAC registrant, becomes a public entity and must be able to meet all the public-entity reporting requirements applicable to the combined entity.

For more information about SPACs, see [Section 1.7](#) of Deloitte's Roadmap *Initial Public Offerings* and Deloitte's October 2, 2020 (updated April 11, 2022), *Financial Reporting Alert*.

### 5.11.2.2 Offerings Made in Accordance With Regulation A

Regulation A, as amended in 2015 (also referred to as Reg A or Reg A+), provides an exemption from the ordinary requirements of the Securities Act. This exemption allows U.S. and Canadian entities to raise up to \$75 million in a 12-month period by issuing certain types of securities, including equity securities. Regulation A requires that certain disclosure documents be submitted via EDGAR and allows for the confidential review of offering documents.

For more information about Regulation A, see [Section 1.8](#) of Deloitte's Roadmap *Initial Public Offerings*.

### 5.11.3 The IPO Registration Statement

While the nature of the IPO may vary, before an entity may commence a public offering of securities, the entity, or "registrant," must file a registration statement with the SEC under the applicable securities laws. The registration statement contains extensive financial and business-related disclosures about the entity and the securities being offered. A registrant provides such disclosures in accordance with (1) Regulation S-X, which sets forth the SEC's reporting requirements for the financial statements, and (2) Regulation S-K, which sets forth the SEC's reporting requirements for information outside the financial statements.

Once submitted to or filed with the SEC, an IPO registration statement is processed and reviewed by the staff of the Division. The purpose of the review is to determine whether the registration statement complies with the SEC's disclosure requirements. An entity can generally expect the staff to complete its initial review and furnish the first set of comments within 30 calendar days. The entity would then respond to each of the SEC's comments and reflect requested edits, as well as any other updates, in an amended IPO registration statement, which the SEC will also review. After the initial filing, the SEC's review time can vary significantly but typically is within two weeks. An entity can expect several rounds of comment letters with follow-up questions on responses to original comments as well as additional comments on new information included in the amended registration statement.

Depending on the length of time between amendments, financial statements and other information included in the registration statement may need to be updated to reflect subsequent periods. Certain information, such as estimated pricing of the IPO and related disclosures, may not be known as of the initial filing date and therefore is not added until a later amendment. However, the SEC expects each draft of the registration statement to be substantially complete at the time of its submission, unless there are specific accommodations for omitting otherwise required information.

Once all the staff's comments are cleared, an entity will typically print a preliminary prospectus, commonly referred to as a "red herring," and go on a "roadshow" to meet with and present to prospective investors. After the roadshow, the entity and its counsel may request that the SEC declare the registration statement "effective" at a certain date and time, after which the securities will be registered and, if listed on an exchange, begin trading.

Most registration statements will only become effective after the SEC comment process has been completed and an effective date has been requested by the entity and granted by the SEC.

Entities may confidentially submit certain IPO registration statements to the SEC. The ability to file nonpublicly is a significant benefit because it allows entities to keep potentially sensitive information from customers or competitors until later in the IPO process. It also lets entities confidentially respond to SEC comments, update the draft registration statement, and continue to assess market conditions throughout the IPO process and enables them to delay or withdraw the IPO, if desired, without public scrutiny.

While draft registration statements may be initially submitted nonpublicly, an entity will eventually be required to publicly file all previously submitted drafts unless it elects to withdraw the IPO. Specifically, all comments and the related responses, even if they were previously submitted confidentially, will be posted to the SEC's Web site no earlier than 20 days after the review is completed by the staff or the registration statement is declared effective. All confidential submissions must be filed publicly no later than 15 days before (1) a roadshow or (2) the requested effective date of the registration statement if no roadshow is planned.

For more information about the IPO registration statement, see [Section 1.4](#) of Deloitte's Roadmap *Initial Public Offerings*.

#### **5.11.4 Identifying the Required Financial Statements for the Registration Statement**

One of the more challenging aspects of preparing for an IPO is ensuring that the entity has identified the appropriate financial statements to include in the filing. There are many considerations related to determining the appropriate financial statements to include in the IPO registration statement. For example, an entity will need to identify and prepare the financial statements both for the registrant and for any predecessor entities. In addition to the complexities associated with identifying the required financial statements for the registrant and its predecessor(s), the entity must consider other potential financial statement requirements that may result in additional meaningful historical financial information for investors in the IPO. The specific requirements could be related to significant business acquisitions, equity method investments, guarantors of registered securities, or entities that collateralize registered securities.

When the circumstances are particularly complex, registrants may wish to submit a prefiling letter to the Division to preclear the planned financial statement presentation and avoid surprises or potential delays during the SEC's review of their IPO filing. Registrants may wish to seek modifications to their financial reporting requirements when the application of a rule results in the requirement to provide more information than the registrant believes is necessary. For example, a registrant may submit a prefiling letter in accordance with SEC Regulation S-X, Rule 3-13, referred to as a Rule 3-13 waiver, in which it requests to omit the financial statements for a significant acquired business, real estate acquisition, or equity method investment.

Some of the more significant considerations in the determination of the financial statements include, but are not limited to, issues related to the following:

- Registrant determination.
- Recently organized registrant (e.g., shell company such as a SPAC) financial statements, which could include predecessor financial statements or carve-out financial statements.
- Financial statement periods, including interim financial statements and age of financial statements.
- Omission of certain financial information.
- Waiver and other requests.
- Businesses acquired or to be acquired.
- Equity method investees.
- Guarantors and issuers of guaranteed securities registered or being registered.
- Securities that collateralize registered securities.

For more information about (1) identifying the required financial statements for the registration statement, (2) financial statement preparation and disclosure requirements, and (3) other registration statement reporting (including MD&A and pro forma financial information), see [Chapters 2, 3, and 4](#), respectively, of Deloitte’s Roadmap *Initial Public Offerings*.

### 5.11.5 Accounting Matters

This section highlights common accounting issues addressed in preparing financial statements for inclusion in an IPO registration statement. While some of the guidance may be directly applicable, some of it may be applied to IPO registration statements by analogy, may be complex, and may require significant judgment. Understanding the structure and substance of the transactions to effect the IPO is critical to making sound and reasonable judgments. During its comment process, the SEC staff will frequently ask management to explain the basis for those judgments, alternatives considered, and why the information provided to the user is representationally faithful. For additional observations related to frequently issued SEC staff comments, see Deloitte’s Roadmap *SEC Comment Letter Considerations, Including Industry Insights*.

Some common accounting issues that arise in preparing IPO financial statements include, but are not limited to, the following:

- Carve-out considerations (see [Section 5.2.1](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Carve-Out Transactions*).
- Spin-off transactions (see [Section 5.2.2](#) of Deloitte’s Roadmap *Initial Public Offerings* and [Section 1.2.3](#) of Deloitte’s Roadmap *Carve-Out Transactions*).
- Reorganization in anticipation of an IPO (see [Section 5.2.3](#) of Deloitte’s Roadmap *Initial Public Offerings* and [Appendix B](#) of Deloitte’s Roadmap *Business Combinations*).
- Related-party transactions (see [Section 5.3](#) of Deloitte’s Roadmap *Initial Public Offerings*).
- Business combinations (see [Section 5.4](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmaps *Business Combinations* and *SEC Reporting Considerations for Business Acquisitions*).
- Valuation of financial instruments (see [Section 5.5](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Fair Value Measurements and Disclosures (Including the Fair Value Option)*).
- Liabilities, equity, and temporary equity (see [Section 5.6](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmaps *Convertible Debt (Before Adoption of ASU 2020-06)*, *Issuer’s Accounting for Debt*, and *Distinguishing Liabilities From Equity*).
- Offering costs (see [Section 5.7](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmaps *Convertible Debt (Before Adoption of ASU 2020-06)*, *Issuer’s Accounting for Debt*, and *Distinguishing Liabilities From Equity*).
- Stock-based compensation (see [Section 5.8](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Share-Based Payment Awards*).
- Income taxes (see [Section 5.9](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Income Taxes*).
- Earnings per share (see [Section 5.10](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Earnings per Share*).

- Segments (see [Section 5.11](#) of Deloitte’s Roadmap *Initial Public Offerings* and Deloitte’s Roadmap *Segment Reporting*).
- Subsequent events (see [Section 5.12](#) of Deloitte’s Roadmap *Initial Public Offerings*).
- Unwinding private-entity accounting elections and practical expedients (see [Section 3.4](#) of Deloitte’s Roadmap *Initial Public Offerings*).

### 5.11.6 Audit Considerations

After the financial statement requirements have been identified for a registration statement, the next step for the registrant’s audit committee<sup>3</sup> is to engage auditors to complete the necessary audits and reviews of the financial statements, as applicable. The SEC indicates on its [Web site](#) that the Securities Act, which governs registration statements, has two fundamental goals: (1) to “require that investors receive financial and other significant information concerning securities being offered for public sale” and (2) to “prohibit deceit, misrepresentations, and other fraud in the sale of securities.” In accordance with these objectives, the Securities Act requires that an independent registered public accounting firm audit annual financial statements and read certain other financial information included in the registration statement. In addition, interim financial statements included in the registration statement may be subject to a review under PCAOB standards. In some instances, stub-period financial statements may also need to be audited.

Audited financial statements to be included in the IPO registration statement often will be subject to additional audit procedures because the standards governing audits of public entities are different from those for private entities. Specifically, the financial statement audits performed for a private entity and its independent auditor are subject to the auditing standards issued by the AICPA’s Auditing Standards Board; however, audits of financial statements included in a registration statement filed with the SEC need to be performed in accordance with PCAOB standards. Although the auditor may have previously expressed an opinion on the annual financial statements in accordance with AICPA auditing standards (i.e., auditing standards generally accepted in the United States, or “U.S. GAAS”), the auditor will need to issue an auditor’s report on the required annual financial statements in accordance with PCAOB standards for inclusion in the registration statement, or in accordance with both U.S. GAAS and PCAOB standards when the entity is submitting its draft registration statement confidentially. To issue this auditor’s report, the auditor must be registered with the PCAOB and comply with all relevant PCAOB requirements.

Some common audit issues that arise in preparing IPO financial statements include, but are not limited to, the following:

- Independence considerations.
- Changes in auditors.
- Completing audits and reviews.
- Consents.
- Comfort letters.
- ICFR.
- Critical audit matters.

For more information about audit considerations, see [Chapter 6](#) of Deloitte’s Roadmap *Initial Public Offerings*.

<sup>3</sup> If the entity has not yet formed an audit committee, other governing bodies the entity has charged with governance, such as a board of directors or owners, may fulfill this role before the entity becomes a public entity.
