

Digital finance in action

Deloitte has supported over 300 finance transformations using Oracle Cloud. Below are a few ways finance teams have used digital technology to support their businesses.

	Business problem	Oracle Cloud solution
Accelerate M&A integration	A large logistics provider, managing a worldwide portfolio, needed a digital finance platform to support M&A integration—one providing deeper insights, faster execution, and increased value.	With M&A integrations, speed is of the essence. Oracle Cloud's integrated platform with real-time financial analytics enabled faster decision making, so the company could recognize synergies quickly and report positive results to the Street.
Standardize and transform core finance	A global technology company with multiple ERP platforms and over 100 legal entities needed to standardize on a single digital platform encompassing sourcing, procurement, intercompany, finance, and planning processes.	Oracle Cloud provided a single system for performing financial consolidations and producing reports for the integrated company. It also helped standardize complex global requisitioning, sourcing, and procurement processes.
Enable new operating model and business partnering	A fully owned subsidiary of a global bank was looking to eliminate inefficiency and consolidate its accounting and reporting activities into a single "rightsized" controllership organization.	Oracle Cloud's modern and integrated system architecture provided consistent information across the controllership organization, enabling Finance to provide new insights to the business and create synergies through an optimized operating model.
Support new consumption billing models	A consumer organization needed to digitize and transform its archaic contracts, billing, and revenue accounting system to eliminate manual processes and stop revenue leakage.	Oracle Cloud's cloud-native integration framework was instrumental in designing a scalable contract invoice management platform that addressed the unique needs of consumer reporting.
