

Inveritas™

Unlocking shareholder value with powerful inventory analytics

Right size inventory to what you need and where you need it

Across ten industry sectors, just a 10% reduction in Days on Hand could lead to more than \$100B in savings.¹ What's your piece of that?

Capture lost sales by resolving service and availability problems

We know there's a delicate balance. Too much inventory can mean too much tied-up capital. Too little inventory and the organization may have service and delivery problems. With companies under pressure to increase shareholder value, the stakes for doing that well are high.

Fuel growth by taking cash out of inventory to invest in the business

Deloitte's inventory analytics solution, **Inveritas™**, is designed to incorporate the methods and decades-long experience of Deloitte's leading supply chain and manufacturing operations practice to help the client:

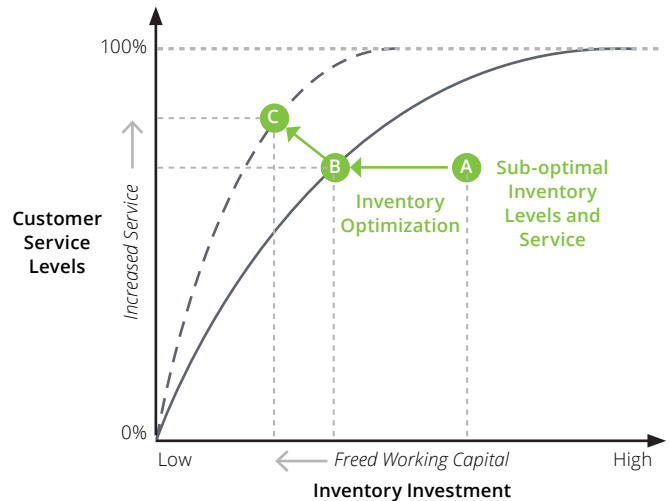

¹Deloitte cross-industry analysis, including Agriculture, Alcoholic Beverages, Apparel, BioTech, Food, Beverages, Medical Equipment, Household, and Pharma sectors, based on Capital IQ data.

Hit the curve to potentially unlock savings

Inveritas is designed to help companies to rapidly identify and set the optimal level of inventory to meet target customer service levels by understanding where and why they have too much or too little. If you can't see the underlying drivers of inventory issues, it's often difficult to hit the curve (stuck in position A).

Then, shift the curve to enable sustained long-term inventory excellence

Once companies hit the curve (position B), they can begin to shift the curve by improving the underlying capabilities that drive needed inventory, like demand accuracy, lead-times, and production and shipping frequency. Inveritas is designed to provide insight into these underlying inventory drivers, and provide rapid quantification associated with driver improvement—which is key to freeing up capital, increasing customer service levels, and improving shareholder value (position C).

Inveritas isn't just an analytics and visualization tool; its power is in embedding the collective brain power and wisdom from decades of Deloitte's experience in solving the hardest and most complex inventory problems.

See how Inveritas unlocked the value on these consulting engagements

A \$10B+ life sciences company

Identified \$100M in excess inventory using Inveritas to conduct a detailed inventory diagnostic.

A global food and beverage company

Identified nearly \$125M in excess inventory, finding \$5M in quick-win reduction opportunities using Inveritas.
