

## Solvast|Forecast™

Deloitte's Financial Technology team, a leader in the financial software solutions market, has developed Solvast|Forecast, a software solution designed to forecast cash flows for financial instruments based on a variety of user-defined assumptions. Solvast|Forecast is a flexible, scalable, and efficient cash flow forecasting tool that can accommodate diverse projection needs. The system's features include:

- Support for financial instruments across multiple asset classes
- Application of assumptions based on various criteria
- Generation of projections on either an expected or contractual basis
- Ability to add additional characteristic fields as needed
- Projection of cash flows, defaults, losses, and recoveries
- Instrument-level calculations that allow for customized treatment of individual instruments and detailed analysis
- Ability to forecast cash flows on large quantities of instruments in a single scenario
- Multiple scenarios can be executed against the same set of data with different assumptions and saved concurrently
- Robust reporting for analysis, including comparison of scenario results
- Wizards and guided workflows propel users through the process of setup and ongoing use
- Instrument-level data can be imported directly from other Solvast products, manually by the user, or via customized import

Solvast|Forecast can be implemented as a stand-alone forecasting tool or integrated with Deloitte's other related software products, such as [Solvast|LDC™](#).
