

Deloitte's Financial Technology team, a leader in the financial software solutions market, has developed Solvas|Agent, an administration and reporting system to support the activities of loan administrative agents. Solvas|Agent provides the ability to create agent reports and notices from loan administrative activity tracked in Solvas|Portfolio™. The extensive loan administration support of Solvas|Portfolio, coupled with Solvas|Agent, brings modern technology to the operations of loan administrative agents.

Efficient, modern distribution

The platform supports individual or batch notice generation in various file formats. The automatically customized notices can be sent directly by the system's email distribution capabilities from your corporate email server or from your team's desktop email application. All notices distributed are logged in the system for a full record of historical correspondence on loan transactions.

Centralized information

Advanced information management for contacts and wiring/payment instructions supports the complex network of parties and details necessary for accurate portfolio servicing.

Agent-specific reporting

In addition to facilitating the agent's administration needs, the system has a library of agent-specific reports, including reports addressing:

- Outgoing wires
- Lender allocations
- Transactions
- Accrual history
- Cash activity

Solvast Agent brings the latest and most accurate administration technology in the loan industry to loan administrative agents.
