

**SOLUTION BRIEF**

# Vizualizing costs across the cloud just got easier.

A feature within ATAVision™, CloudCast™ allows users to easily select any number of servers in their current infrastructure and project costs across multiple cloud environments.

Available as part of ATAVision™ or the ATASphere™ platform, CloudCast™ leverages APIs to maintain up to date pricing for Amazon Web Services, Microsoft Azure, and Google Cloud Platform, amongst others, including the ability to import custom pricing. Compared costs include CPU, memory, and storage. A simple interface helps enable you to project the impact of manipulating these elements for cloud instances.
