Cloud solutions overview

It takes more than an understanding of technology to seize the transformative power of cloud. We factor in the realities of your business and your industry to provide solutions that help amplify impact throughout your cloud journey.

Business and technology are relentlessly propelling each other forward. Cloud technologies have sped that process, facilitating a continuous process of iterative change that can lead to competitive leaps. In this environment, market disruption is possible any day, every day. The only question: Will you be the one to disrupt, or be disrupted?

At Deloitte, we look beyond the technology horizon to help you solve your most complex business problems and seize emerging opportunities—today, tomorrow, and into the future. We do this by focusing on the most important element of the transformation equation: you. We scrutinize the context of your business and industry, drawing on the insights of our world-class consulting practitioners. We consider each element of your technology ecosystem, your operating model, the realities of your marketplace. We map out requirements across your entire C-suite. From that accumulated perspective, we help you plan, build, transition, and manage a cloud journey that leads you on an efficient path toward sustained value and meaningful transformation.

Disrupt, transform, repeat. It's a relentless approach that helps propel our clients' businesses and technologies forward together. With our breadth of services and technical depth, we can bring solutions and people together to put you on a path of persistent innovation.

“A global leader in IT Infrastructure Transformation Consulting based on depth and breadth of capabilities.”

— Kennedy

What do you see in the future for your company? Greater agility to respond to changing market conditions? Rapid scalability of your technology resources? The ability to reinvent rather than just react?

This is what cloud can enable. Many companies across industries are already achieving faster time to market, reduced capital expenditures, and operational efficiencies by deploying cloud technologies across their front lines, back offices, supply chains, and IT infrastructures.

But simply moving data and applications to the cloud isn’t enough. Disruption comes when you reimagine core operational processes, reconfigure key resources, and redeploy human capital through the lens of cloud. That kind of change isn’t ever easy—and it can’t be done only with technology. But it has the potential to help you achieve and maintain competitive advantage.

Deloitte is uniquely positioned to build, execute, and manage a comprehensive strategy that puts cloud technology in service of your vision for the future. Our development teams have designed and built custom cloud solutions for a range of targeted business needs across a spectrum of industries. Our strong relationships with leading vendors allow us to identify and implement solutions that fit your unique requirements.

Our technology professionals are backed by a global network of specialists in virtually every imaginable aspect of running an optimized organization. People who understand your roles, your industry, your competitive environment, your processes—so we look not only at your IT ecosystem, but also at how technology impacts your operational structure, balance sheet, supply chain, and other major business structures.

Our knowledge and experience across the spectrum of cloud and business services allows us to insert ourselves at any stage in your journey and help accelerate your progress toward your goals. Wherever we begin, we help align your people and orchestrate resources on a clear path to achieve your strategic objectives.

---

Cut through the fog and move into the cloud

Our cloud services span requirements at every stage along the client journey

**We plan**
Through a thorough assessment of your cloud strategy and readiness, we will help you build the business case, catalogue applications, align organizational priorities, and ultimately map out your cloud journey.

**We execute**
Whatever your needs, we can implement it. We have dedicated practices that can derive exponential value from all major cloud-based commercial SaaS solutions. When out-of-the-box is out of the question, our experienced architects and programmers can deliver custom platform-as-a-service, scratch-built applications, and more. Then, we can migrate your organization into cloud in a sequenced, orderly, secure, and efficient fashion.

**We run**
We provide dedicated, active management by leveraging our secure platform and worldwide network of specialists to deliver end-to-end, hands-free, 24/7 services.

**We amplify**
We drive exponential value at every stage of your cloud journey by engaging our worldwide network of business and industry specialists to look again at how cloud can impact your operations, people, and assets. Our advisory, technology, strategy & operations, and human capital professionals can help you identify and capitalize on opportunities for meaningful disruption.

“Named”
“A global leader in Cloud Consulting based on capabilities.”
— ALM Intelligence^2
The value you derive from cloud depends on five factors. The first two—your **project parameters** and the **technology**—are givens. True transformation comes when your advisor has deep understanding of the other three—your **business**, **industry**, and **cultural dynamics**. Deloitte applies that understanding relentlessly to create exponential value at every turn and address the key issues that motivate your stakeholders.

“It’s no longer a question whether we will move to the cloud; it’s a question of when and how. We need a partner who can meet us where we are and get us efficiently to where we’re going.”

— Business executive

“Shifting costs from capital to operational expenses is great. But there will be other impacts on our balance sheet. We need to understand it all from a regulatory perspective.”

— Finance executive

“None of this will be easy. We need help aligning our technology team and resources, anticipating the barriers ahead, and mapping solutions.”

— Technology executive
