

The Deloitte and CA Technologies Alliance Managing Risk and Providing Greater Enterprise Value from IT

Innovative Information Technology (IT) solutions can have a big impact on an organization's bottom line. Not only can they provide a foundation that may accelerate service delivery and enable business transformation for new business opportunities, they may also help protect the enterprise from security, privacy and cyber risks that are constantly evolving as the organization changes.

The Deloitte and CA Technologies alliance brings together the IT strategy and implementation skills of Deloitte's experienced practitioners with the applicable technologies from CA Technologies to help organizations better manage security risks and provide greater value from their IT portfolio.

Deloitte has been providing enhanced business services and solutions utilizing CA Technologies software for more than 10 years. In recognition of performance and overall commitment, Deloitte was selected as both "Security Partner of the Year" and "CA Clarity Partner of the Year" for 2013 by CA Technologies.

CA Technologies solutions, along with Deloitte's global insights, knowledge and experience, can help enable customers to effectively integrate technology, processes, and people to tackle the toughest enterprise challenges.

Bringing a strategic perspective to Technology Business Management (TBM)

Like other business functions, IT should demonstrate the value that its services provide to the business and strive to continuously improve the value. The ability to focus resources where they can provide high-quality benefit to the business

can be critical to achieving this goal and requires IT managers to proactively plan, track, and analyze the cost, value, and compliance of IT services.

Deloitte has a distinctive approach to TBM and project portfolio management (PPM) that puts the focus on value realization. Our multi-disciplined capabilities allow us to understand both the business and technology issues that organizations are facing. We combine our knowledge and experience in these areas with CA Technologies leading IT management technologies to help enable visibility into the strategic business drivers, which can then be aligned with the client's underlying IT competencies.

Based on a foundation of effective project management and governance, our services are designed to help CXOs better understand how to pull the levers that impact shareholder returns.

Together, Deloitte services and solutions and CA Technologies offerings can help organizations in their efforts to provide the benefits listed below.

TBM benefit opportunities

- Reduce overall IT costs
- Provide new IT services faster
- Increase service levels for important IT services

PPM benefit opportunities

- Reduce cost per project
- Faster time to value
- Increase IT to business alignment
- Reduce project failure rates
- Decrease project redundancy
- Increase staff productivity

“Deloitte’s seasoned professionals with deep industry knowledge and practice resources help enhance our existing delivery approach, resulting in an improved customer experience.”

— Adam Elster, Executive Vice President, CA Technologies

Managing security risks

Given the increasing complexity of security threats and the pace at which new risks emerge, it can be a challenge to balance the competing priorities to protect the enterprise while granting appropriate information access and also controlling costs.

Deloitte, along with CA Technologies, has a long history of assisting organizations in their efforts to mitigate the risks associated with securing information and data. We can bring specialization to many facets of a cyber risk initiative — from business process to people and technology.

As two of the recognized leaders in the security space, Deloitte and CA Technologies teams are dedicated to assisting clients in protecting brand and shareholder value and helping to protect sensitive data in the face of today’s fast-moving regulatory and technology environments. Our services and solutions are designed to address identity and access management, data and privacy, information and technology risk management, including mobile and social media security issues, and cloud and virtual environment security.

Through an industry-informed lens, we help companies:

- Identify risks and vulnerabilities
- Understand their risk tolerance
- Evaluate business processes and goals
- Select and implement enabling technology that fits each organization’s requirements
