Push towards digitization

Globally, the growth of digital banks has been driven by the increasing adoption of smartphones, rise of Fintech companies and changing consumer behavior.

Overall, the global banking sector has increased digitalization in every customer journey step with a focus on the development of authorization methods, card management, bancassurance and investment functionalities¹.

Players in the ME market are moving away from traditional banking status quo to end-to-end banking platforms to compete with both digitally mature banks and Fintechs. Further, the opportunity gap widens as Middle Eastern countries seek to diversify their economies, engage the private sector and accelerate foreign direct investment in relevant sectors.

Some of the current players*

¹Deloitte Digital Banking Maturity Report 2022 *Non exhaustive

Digital banking landscape

Over the last 5 years, the ME digital banking sector has seen entry of new players, expansion of existing Fintech and telecommunication players into digital banking, and incumbent traditional banks carving out specific digital banking platforms.

Key highlights of the development in digital bank licensing within ME:

- In Saudi Arabia, the Central Bank licensed 3 digital-only banks while other applications are in the pipeline as of 2024. The rise of incumbent banks setting up fully digital arms has been observed
- In the UAE, both main-land and free zone regulators are licensing digital banks. Wio and Zand received their license from the Central Bank during 2022 and 2023.
- The Qatar Central Bank is currently looking to license digital banks while developments within regulations like e-KYC to regulate online banking continue to be introduced.
- The Central Bank of **Egypt** released digital bank and branch licensing regulations in 2023, and approval to set-up a Digital Bank was granted to Banque Misr, while other applicants enter the pipeline in 2024
- The Central Bank of **Kuwait** started accepting digital only bank license applications in 2022. While new entrants are in the pipeline, the National Bank of Kuwait (NBK) pioneered digital transformation, through the launch of Weyay as Kuwait's first Digital Bank.
- The National Bank of **Bahrain** launched its digital banking arm. Bank ABC launched Ila Bank and Singapore Gulf Bank was granted a digital bank license by the Central Bank of Bahrain in 2024.
- Oman's Fintech ecosystem is in its early stages but is gradually developing with a strong focus on economic diversification and digital transformation. Bank Nizwa had introduced its first digital-only branch in 2022

Regulatory landscape

Central Banks across the ME have been issuing regulatory frameworks for licensing of digital banks such as Saudi Central Bank's Additional Licensing Guidelines 2020, the Central Bank of Kuwait (CBK) issued similar guidelines in 2022 and the Central Bank of Egypt issued guidelines in July 2023.

Potential applicants are expected to understand the specific digital banking market and customer expectations, offer unique and innovative value proposition, meet required capital and liquidity requirements and ensure compliance to the applicable risk and compliance regulatory framework.

ME regulators have been leading the 'digital revolution' in the region and have already issued licensing guidelines on the requirements for establishing Digital Banks.

Licensing journey

The licensing journey involves meeting the regulator to proceed with preparation, submission and regulatory assessment of digital bank license application. The specific licensing journey differs between different regulators. However, typically, the journey to obtain regulatory approval could be broadly classified into the below stages:

Central Bank in principle approval/license Set-up and launch post final assessment by Central Bank

Pre-application regulatory consultation Preparation of application and supporting documents

Submission of application to the Central Bank

Review and assessment of application by Central Bank

Regulatory requirements

Individual regulator or country specific nuances aside, digital banking regulatory regimes in the region broadly follow a similar set of expectations.

Regulators expect digital banks to be set-up and operate in compliance with the existing prudential and regulatory framework applicable to traditional banks along with further requirements that may be specific to all digital banks or may also be determined on a case-by-case basis during evaluation and assessment.

Focus areas* while designing and building a digital bank

Value proposition	Market and feasibility study
Targets segment	Technology blueprint
Business strategy	Go to market approach
Financial projections	Risk and compliance
Operating model	Capital/Liquidity management
Digital channels	Cybersecurity and resilience
Customer journeys	Exit plan
*Non exhaustive	

Key challenges to consider

Investment: Significant amount of capital required to meet minimum regulatory capital requirements, coupled with time and resource heavy licensing, set-up, testing and launch

Readiness assessment: Appropriately assessing regulatory and other requirements for going-live/launch

Customer trust: Addressing concerns regarding data security, privacy, absence of physical branches, and reliability to foster client acceptance and urge customers to move from traditional banks to digital banking services.

How we can help

We offer end-to-end support in digital bank licensing and set-up within the region. We support local and oversees players looking to enter the market, helping them across their entire journey, from the development of the business and regulatory strategy, to regulatory license submission to relevant authorities, license operationalization and go-live.

Our differentiators

Digital bank experience

- Supported multiple digital banks with regulatory licensing:
 - Five digital banks in KSA
 - Two digital banks in UAE
 - One digital bank and Kuwait
 - Currently engaged in Egypt
- Supported an existing bank to re-launch as a fully digital bank in UAE
- Supported in building three digital banks in KSA and two digital banks in UAE
- Currently engaged with applicants

Regulatory experience

- Developed regulatory pre-assessment tool and assessed ~200 entities in the regulatory Fintech Sandbox
- Developed risk-based supervision framework for Digital Banks, Conventional Banks, Insurance, **Fintechs**
- Developed multiple regulations including consumer and wholesale lending sales and forbearance practices

Our tools and accelerator

- We have our in-house tools and accelerators which have been developed and tested during the past engagements with multiple digital banks in the region and shall enable agile and seamless delivery of the engagement
- Unlock insights with our Centers of Excellence which house Deloitte network specialists from across the globe

Our expertise and approach

- We have a team of experts with extensive experience in digital bank licensing and set-up
- We have a tried and tested approach for developing Target Operating Models, Policies, Procedures, Frameworks, Methodologies, Models and Tools to operationalize a Digital Bank

Our solution

Discovery and Licensing

- Conduct market and feasibility study to identify customer needs, target market and value proposition
- Develop financial projections and capital, liquidity and exit plans
- Design the high-level technology blueprint
- Develop organization structure
- Develop or update frameworks and policies
- Support with License Application and offer post submission regulatory support

Design

- Set-up agile governance and project management office
- Detail the technology blueprint design and systems
- Detail value proposition and Minimum Viable Product (MVP), channels and applications
- Develop target operating model, operations, core capabilities and business processes
- Develop risk, control and compliance policies and frameworks to manage risks around MVP
- Undertake regulatory review of the proposed design for the digital bank

Build

- Develop full MVP suite of products and in-app features
- Detail, implement and test business operation processes
- Implement and integrate systems, solutions, policies, processes of the new entity to attain the target state
- Set-up or re-organization of key control and support functions including risk management, compliance, internal audit, finance, treasury, technology etc.
- Develop tools for regulatory and \(\Lambda \) real time prudential reporting
- Support with regulatory readiness assessment
- Support in alpha, beta and final testing pre-launch

Operate

- Offer operations support under project based, managed services and loan staffing arrangements
- Assist with the ongoing regulatory reporting and independent risk reviews
- Develop or validate customer and data analytics models/solutions
