

Venmyn Deloitte launches geology site-visit-mapping e-track app

Johannesburg, 27 March 2014: Venmyn Deloitte has launched a state of the art geology site-visit-mapping e-track app. The tool, which is available on Apple and Android, allows users to register the start and end of their site visits by capturing the global positioning system (GPS) co-ordinates.

“For public reports, in particular, it is a statutory requirement that geologists conduct site visits and record the fact that they did,” says Venmyn Deloitte MD Andy Clay, noting that this device sets the basis for the ‘e-track’.

It allows users to capture GPS co-ordinates every ten seconds of a site visit or a portion of a site visit. A map of the site visit can then be generated, named and exported as a google map.

“This app enables you to record the time and position of such visits and download the e-track as a proof of the visit. The e-track map can easily be placed on to a satellite image and even included in the report support documents to show the visit took place.”

The app also describes the services that Venmyn Deloitte offers and the regions in which it operates.

The app can be used on mobile phones where cellphone coverage is present and should be used with satellite-enabled devices where cellphone coverage is limited.

To download the app, please scan the quick response codes (QR Codes) for the app for the Apple and Android stores.
