

Integrated Management Office (IMO)

Integrated management office has emerged as a new delivery system with the potential to provide better performance through more supply chain integration. This concept defines the level of success for the capital project being embarked on. It also ensures that the required amount of time is allowed for front-end planning and integrates delivery schedules (engineering, procurement and construction) with resources, technology and organisational processes requirements.

Role of Integrated Management Office	
The integration management office centralises and integrates the following functionalities:	
<p>Integration Management</p> <ul style="list-style-type: none"> Project delivery management Interface and interdependency management Cost and budget management Quality management Stakeholder management Performance management Document management Commercial management 	<p>Capital Procurement</p> <ul style="list-style-type: none"> Global sourcing Procurement planning and management Free issue material management Expediting and logistics management Master data management
	<p>Governance & Compliance</p> <ul style="list-style-type: none"> Meeting local content requirement CSI project management Compliance with project charter and other regulatory requirement
<p>Operational Readiness</p> <ul style="list-style-type: none"> People, systems, process & technology readiness Procurement & supply-chain readiness Master data management and inventory modelling Warranty management 	<p>Change Management</p>
	<p>Document Management</p>
	<p>Risk Management</p>
