

Cyber Crime and Forensic poll

With fraud and corruption being perpetrated using technology, and cyber criminals becoming increasingly sophisticated in their methods of perpetration, there is a need to critically assess how organisations can outsmart fraudsters and effectively combat cyber-crime.

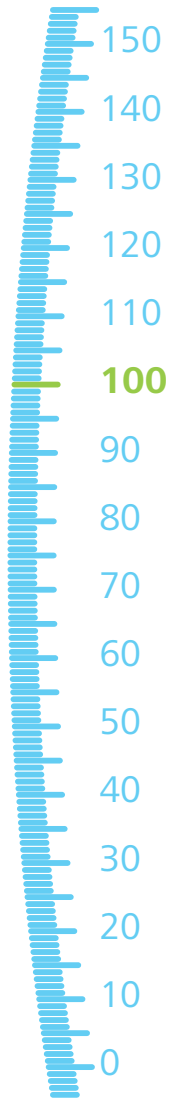

Deloitte Risk Advisory conducted a poll to assess your views on cyber security and forensic. The results are as follows:

The most common methods organisations use to detect and prevent fraud
(respondents could choose a combination of options)

Whistle blower tip-offs	78%
General internal controls	78%
Internal Audit	70%
Continuous control monitoring	41%
Data Analytics	36%
Cyber risk monitoring	34%

95%
of organisations believe that traditional approaches to combatting fraud and corruption are insufficient in combatting cyber crime
