Deloitte trust in government survey

In November 2020, Deloitte surveyed 4,000 American citizens to understand their levels of trust in the US federal government. We also asked citizens about their views on how 39 different federal agencies and departments performed on the four trust signals: humanity, transparency, capability, and reliability.

Some key insights from the survey provide a peek into how trust is perceived by the citizens surveyed—

- **Federal government is one of the least trusted entities.** Respondents’ trust perception of the federal government is the lowest when compared to state and local government and other industries in the survey.

- **Trust in the federal government is less than the sum of its parts.** Respondents’ trust in the federal government as a whole is much less than their trust in 39 surveyed agencies.

- **Trust in high-touch federal agencies is the highest.** Respondents’ trust in federal agencies with whom they interact frequently and closely is the highest. The exceptions are high-touch federal enforcement agencies.

- **Federal agencies do well on competence but should show better intent.** Federal agencies should showcase better intent—empathy, fairness, kindness, transparency—to build trust.
Governments can build trust by demonstrating competence and intent

By measuring and improving the four trust signals, governments can instill confidence and build greater public trust

**How to address trust**

**How to demonstrate and measure trust – HX TrustID™**

**Taking action from a place of genuine empathy**

**INTENT**

Humanity addresses the perception that the government genuinely cares for its constituents' experience and well-being by demonstrating empathy, kindness, and fairness.

**COMPETENCE**

**COMPETENCE**

The ability to execute, to follow through on what one says one will do

**INTENT**

Capability reflects the belief that the government can create high-quality programs and services and has the ability to meet expectations effectively.

**HUMANITY**

Transparency indicates that the government openly shares information, motives, and choices related to policy, budget, and program decisions in straightforward language.

**CAPABILITY**

Reliability shows that the government can consistently and dependably deliver high-quality programs, services, and experiences to constituents across platforms and geographies.

HX TrustID™ validity

Conception

Deloitte TrustID framework is built on proprietary data from consumer industries such as retail, travel, and hospitality. The data behind HX TrustID was developed from a detailed exploration of the components of trust, what trust drives, and what brands should do.

Validation of signal definitions

To determine the trust signals, we conducted a market scan of existing definitions of trust across academic, social science specialists, and other organizations. To validate the trust signals—Humanity, Transparency, Capability, and Reliability—we ran a regression with our survey data to determine how much each signal contributed to an overall sentiment of trust. All signals were significant contributors, giving us confidence that these signals resonate.

Application to government entities

Using the same methodology and validity measures, the framework was customized to be applied in government and public sector context.

The Federal government and big technology companies are the least trusted institutions among respondents surveyed

- Public trust in state and local government is higher among respondents than the federal government.

- “Scientists” as a group significantly outperform the other institutions in the survey.

- Airline companies and large retailers/stores on average are more trusted by respondents than the federal government; but do not outperform local and state government.

To what extent do you trust the below? Please indicate on a scale of 0-10, where 0 means not at all and 10 means you trust it completely.

<table>
<thead>
<tr>
<th>Institution</th>
<th>Trust Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your local government</td>
<td>26%</td>
</tr>
<tr>
<td>Your state government</td>
<td>24%</td>
</tr>
<tr>
<td>The federal government</td>
<td>15%</td>
</tr>
<tr>
<td>Big technology companies</td>
<td>16%</td>
</tr>
<tr>
<td>Airline companies</td>
<td>20%</td>
</tr>
<tr>
<td>Large retailers/stores</td>
<td>22%</td>
</tr>
<tr>
<td>Scientists</td>
<td>52%</td>
</tr>
</tbody>
</table>

Note: Trust has been calculated as the percentage of respondents who selected 8, 9 or 10 on the 10-point scale.
Trust signal scores for government are lower among respondents than scores for all commercial industries in the survey

- Government’s scores, both as an aggregate of scores of individual agencies or when respondents were asked about the U.S. government as a whole, are lower than those of all other industries surveyed.

- Government’s overall scores are the lowest reported by respondents as are the scores on every individual trust signal.

- The U.S. government as a whole scores negatively, meaning more respondents distrusted government than trusted it.

Source: Deloitte analysis of TrustID survey data

*Respondents were asked to rate 39 federal agencies and overall US government separately on the four trust signals. The commercial entities were a part of the Consumer industry TrustID™ survey.

Note: See appendix for a detailed methodology for calculating trust signal and composite trust scores.
The U.S. federal Government’s trust perception among respondents is less than the sum of its parts

This means that when asked to rate each federal agency individually on the four trust signals, respondents tend to trust individual agencies much more than the federal government as a whole.

This could seem counter-intuitive but points toward the “perceptive” nature of trust.

Citizens’ perception about an agency might be based on their interactions with the agency.

In cases where the citizen does not interact with an agency, trust perceptions may be built on past reputation, the reports of others, media coverage, and personal preconceptions.

*Respondents were asked to rate 39 federal agencies and overall US government separately on the four trust signals.
Government actions and missions can further be divided in six archetypes on the Retail-to-Regulator (R2R) spectrum

<table>
<thead>
<tr>
<th>Role</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Retailer</strong></td>
<td>Offer goods and services to external customers or staff in a competitive environment. E.g. United States Postal Service (USPS)</td>
</tr>
<tr>
<td><strong>Retailer-Like</strong></td>
<td>Provides a service, often for a fee, but no competitive alternative exists. E.g. Passport Services, Department of Motor Vehicles (DMV)</td>
</tr>
<tr>
<td><strong>Innovator</strong></td>
<td>Drive new ways of thinking and doing; or support the innovation of others through investment. E.g. National Institutes of Health (NIH), National Aeronautics and Space Administration (NASA)</td>
</tr>
<tr>
<td><strong>Educator</strong></td>
<td>Impart knowledge, skills, and resources to inform, influence or drive an outcome. E.g. Census Bureau, Voice of America</td>
</tr>
<tr>
<td><strong>Regulator</strong></td>
<td>Develop rules and regulations that effectively deter undesired or illegal behaviors. E.g. Food and Drug Administration (FDA), Federal Aviation Administration (FAA)</td>
</tr>
<tr>
<td><strong>Enforcer</strong></td>
<td>Enforce rules and regulations by detecting wrongdoing and enacting consequences. E.g. U.S. Customs and Border Protection (CBP), Law enforcement agencies</td>
</tr>
</tbody>
</table>

Trust perception varies across the R2R spectrum; high-touch agencies on the retail part of the spectrum do better among respondents; enforcer agencies are the least trusted by a wide margin of those surveyed.

- Retailer and retailer-like are the "nearest" to a citizen and typically do well for respondents on all four trust signals.
- The enforcer agencies have a significant trust problem with respondents. They score negatively on both humanity and transparency trust signals.

Source: Deloitte analysis of TrustID survey data
However, all federal R2R archetypes lag the consumer industry “best-in-class” trust scores; indicating a long journey for federal agencies to reach high levels of trust.

Source: Deloitte analysis of TrustID survey data

Note: Consumer industry “best-in-class” score shows the best performing company across all companies surveyed across sectors and sub-sectors in the consumer industry.
Federal retailer agencies match up well with the commercial retail sector on trust as per respondents, but lag the retail sector “best-in-class” scores

- Federal retailer respondents’ trust scores exceed the average of commercial retailers most notably in the area of transparency.
- While federal retailers would need to improve on all dimensions to approach best-in-class commercial retailers according to respondents, the largest gaps are in the competence signals: capability and reliability.

Note: Retail sector “best-in-class” score shows the best performing brand across the retail sector companies surveyed. This differs from the broader consumer industry best-in-class shown earlier. Retail sector average is the average of all retail sector companies surveyed.
There is a wide variance in federal agencies’ trust scores across the R2R spectrum.

Appendix
Understanding the Trust signals
Each trust signal score is based on a representative question in the survey.

**E.g., Humanity trust signal**

**Representative question** - Demonstrates empathy and kindness, and treats everyone fairly.

<table>
<thead>
<tr>
<th>% respondents</th>
<th>% respondents who</th>
<th>% respondents who</th>
</tr>
</thead>
<tbody>
<tr>
<td>&quot;Strongly Disagree&quot; and &quot;Disagree&quot;</td>
<td>&quot;Somewhat Disagree,&quot; &quot;Neither Agree nor Disagree,&quot; and &quot;Somewhat Agree&quot;</td>
<td>&quot;Strongly Agree&quot; and &quot;Agree&quot;</td>
</tr>
</tbody>
</table>

10% | 68% | 22%

Trust signal score is calculated as the difference between “high trust” and “low trust” responses.

**E.g., Humanity trust signal score (12)**

Difference between high trust (22) and low trust (10) responses.

An entity can have the lowest trust score of -100—when all respondents choose “Strongly Disagree” and “Disagree.”

An entity can have the highest trust score of 100—when all respondents choose “Strongly Agree” and “Agree.”
Understanding the trust signal and composite trust scores (Cont’d.)

**Composite trust score calculations**

- **Intent score** is calculated as an average of “humanity” and “transparency” trust signal scores.
- **Trust signal score** is calculated as an average of the four trust signal scores.
- **Competence score** is calculated as an average of “capability” and “reliability” trust signal scores.
